Glue the head and the body after both the parts are built and all the details, such as wings, arms, eyes and tail are attached.
Green tabs glue onto the body directly
Start the head by the face. Join pieces 2 and 3 to 4 before gluing piece 4 to 1. Glue the eyes and arms before closing.

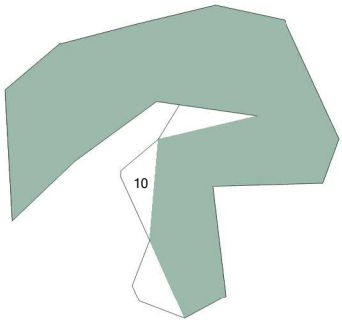
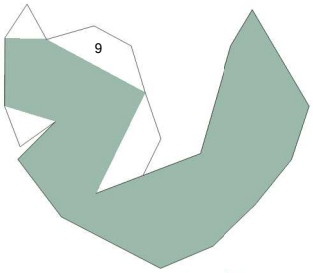
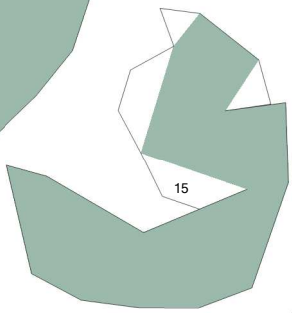
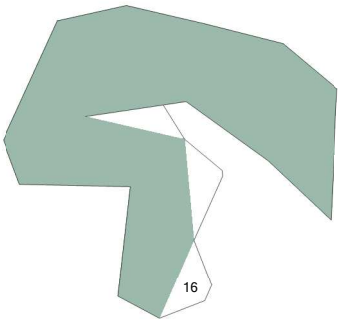
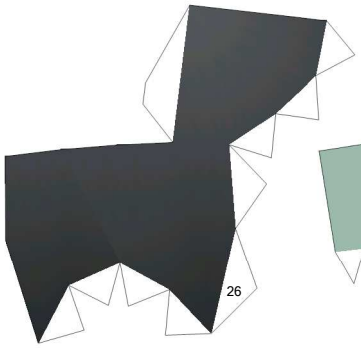
Build the main part fo the arms and glue it to the body, beeing carefull with the position. After the main structure of the arms are build and glued, glue the claws and, only after, the two layers that go on top. Follow the numbers and use a little drop of glue in both the sides of the pieces, use this part to glue these pieces. Hold untill the glue can hold itself.

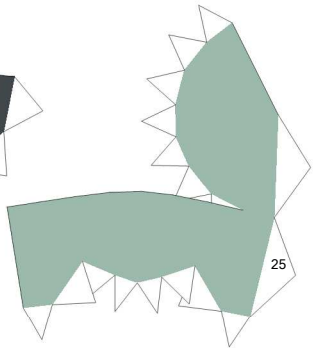


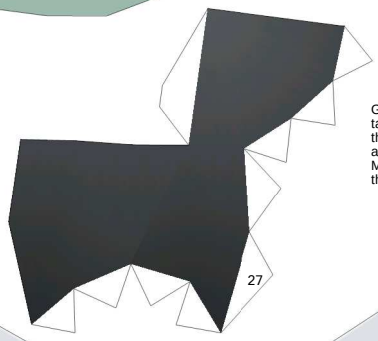




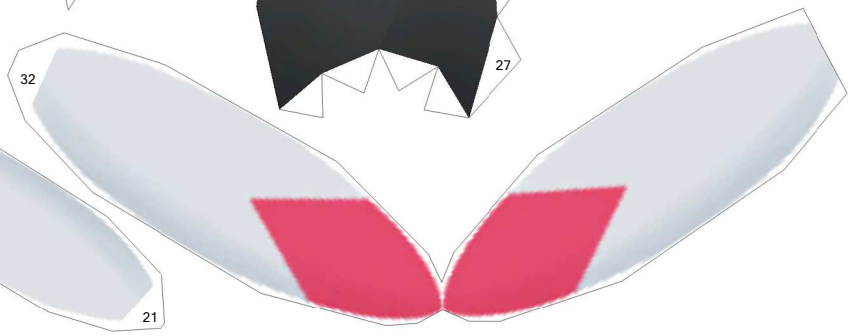


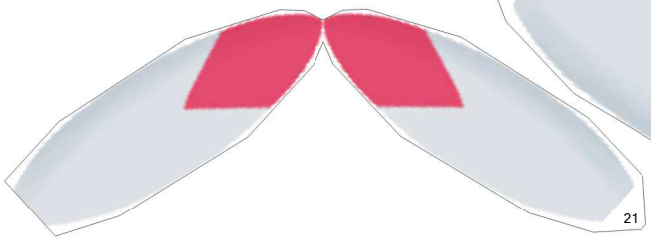


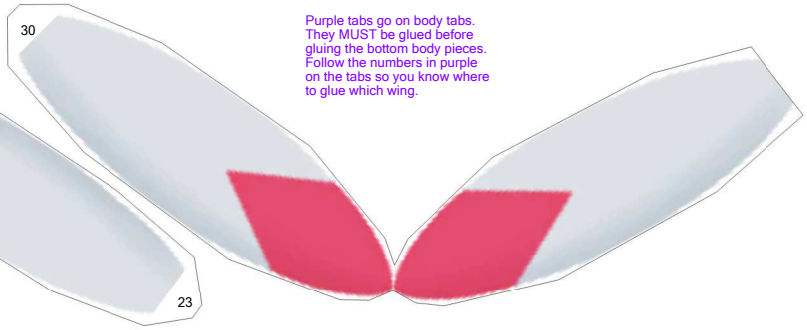




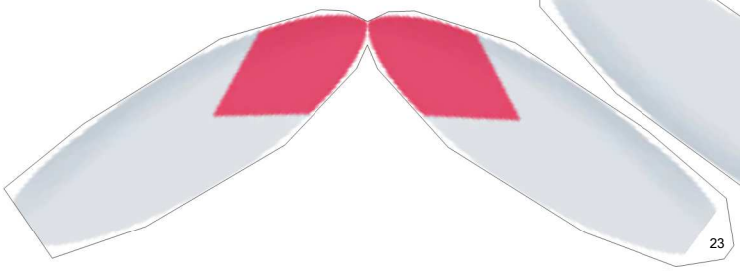
Glue the green part of the tail (25) to the body before adding the spikes (26 -27) to it. Do it as soon as the numbers indicate, this MUST be done before closing the body.

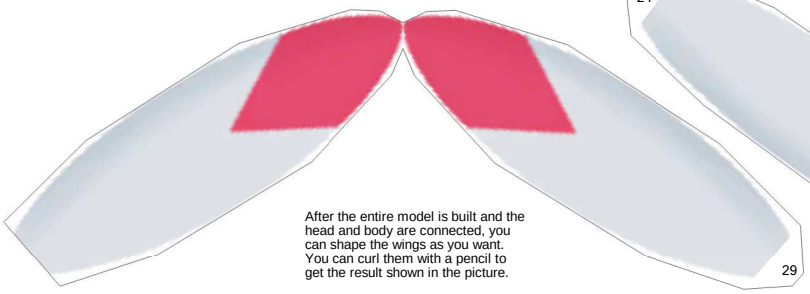






Purple tabs go on body tabs. They MUST be glued before gluing the bottom body pieces. Follow the numbers in purple on the tabs so you know where to glue which wing.





After the entire model is built and the head and body are connected, you can shape the wings as you want. You can curl them with a pencil to get the result shown in the picture.
