NO NEED TO PRINT THIS PAGE
(Unless you want to)

For pieces 24,25, fold them over on each other lengthwise
These get used to connect the head fin ends with the head ribbon ends
In order to connect the head fin ends, ribbons, and head ribbon ends
You may have to get creative. Inserting the ribbons into the pieces
before closing them is one way, or rounding the end of the ribbons
to mold onto the pieces is another.

For the body pieces, be sure to match the numbers to each other.
1 to 1, 2 to 2, etc

The body fins always connect to the non-pink bubble body segments
in the areas with the shaded lines

To fully assemble all the fins, I strongly
suggest having a picture of Mega Rayquaza handy,
such as the one on the following page.
The fins are broken down and flat here, to all fit
into a template easily, so they don't show the assembly well.

Glue 113 and 114 back to back
Then glue 115 and 116 back to back on top of 113/114,
so that the orange rectangle end
is glued inside of 115/116 on the orange round end
Glue 117 and 118 back to back
Then glue 119 and 120 back to back on top of 117/118,
so that the orange rectangle end
is glued inside of 119/120 on the orange round end

For all the Mouth fin ribbon sections, one of the remaining
rectangular ends should mold over the yellow Mouth fin end sections.
The other rectangular end gets glued onto the Mouth fin, off 14 or 19

If you would like better flexibility and shape,
it's advisible to glue wire inside each of the ribbon pieces.
This will allow it to be rigid and shapable
