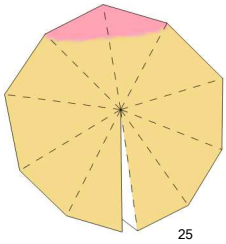
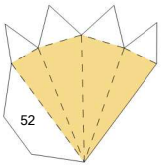
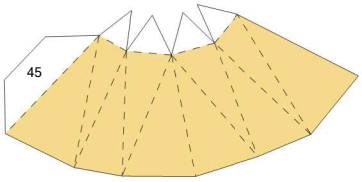
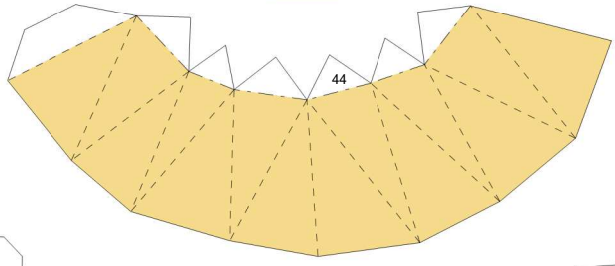
Close the head with piece 25.

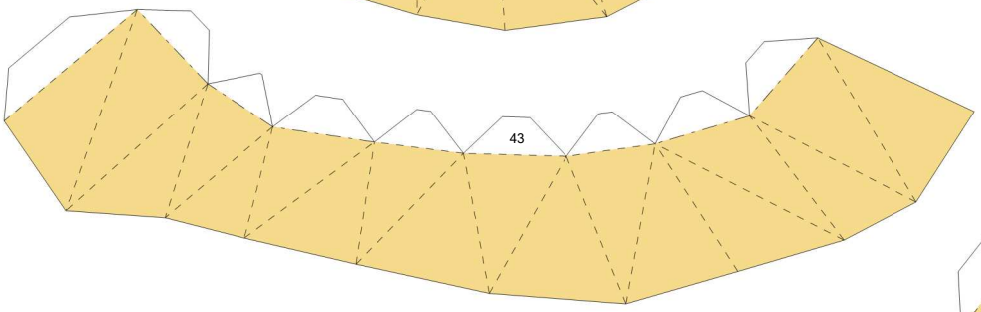


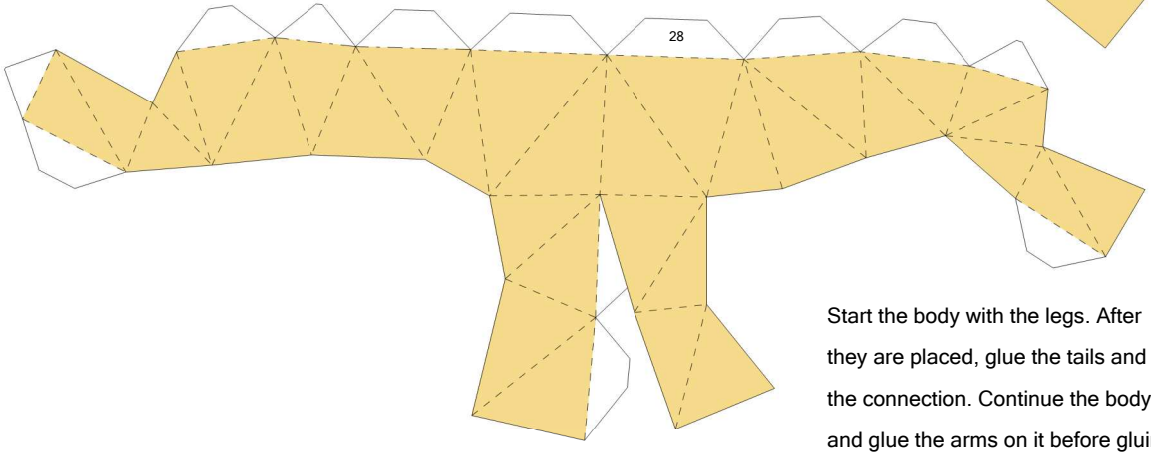


Glue piece 52 to the head before gluing it to the body. After it's place on the head, just pop it in the body with a small amount of glue.

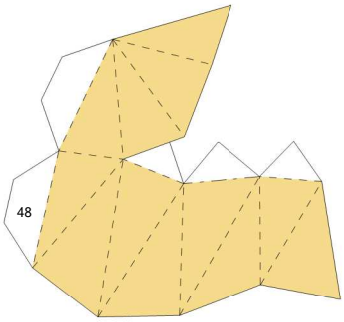


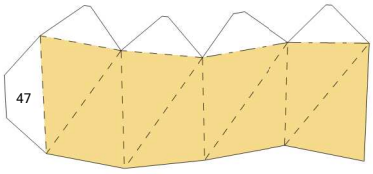


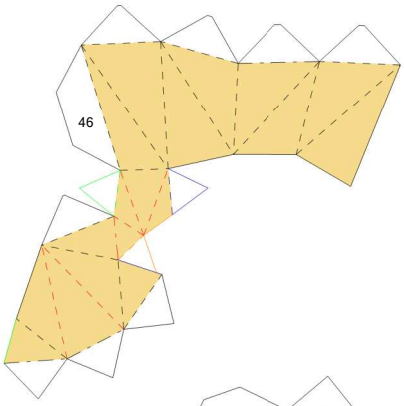




Start the body with the legs. After they are placed, glue the tails and reinforce the connection. Continue the body and glue the arms on it before gluind the head.

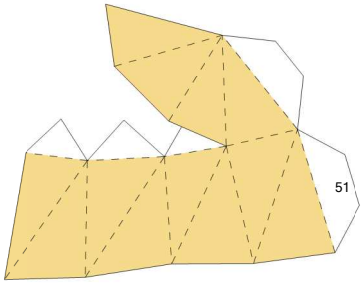


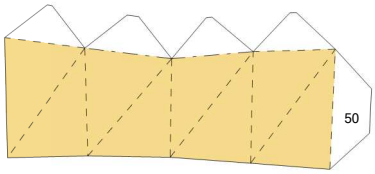


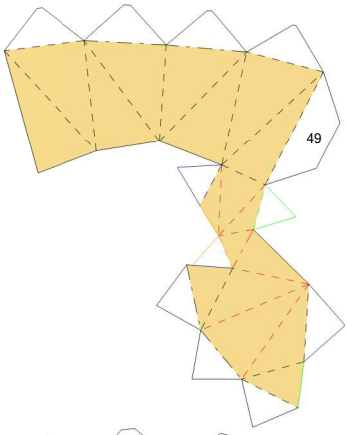


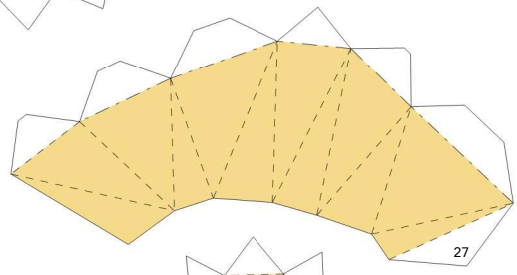
Start the arms at the fingers and close them at the top. Glue them to the body before joining the head.

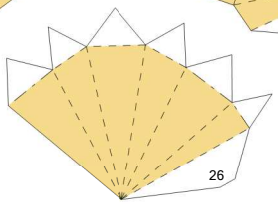
Follow the colored references on the fingers.

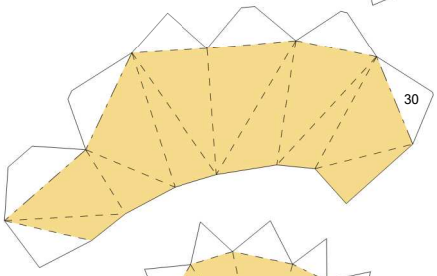


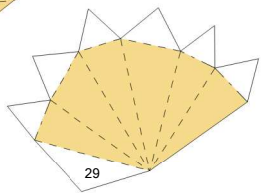




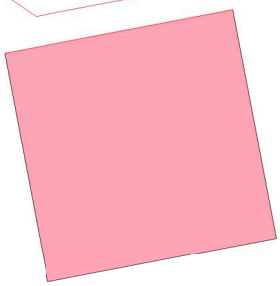




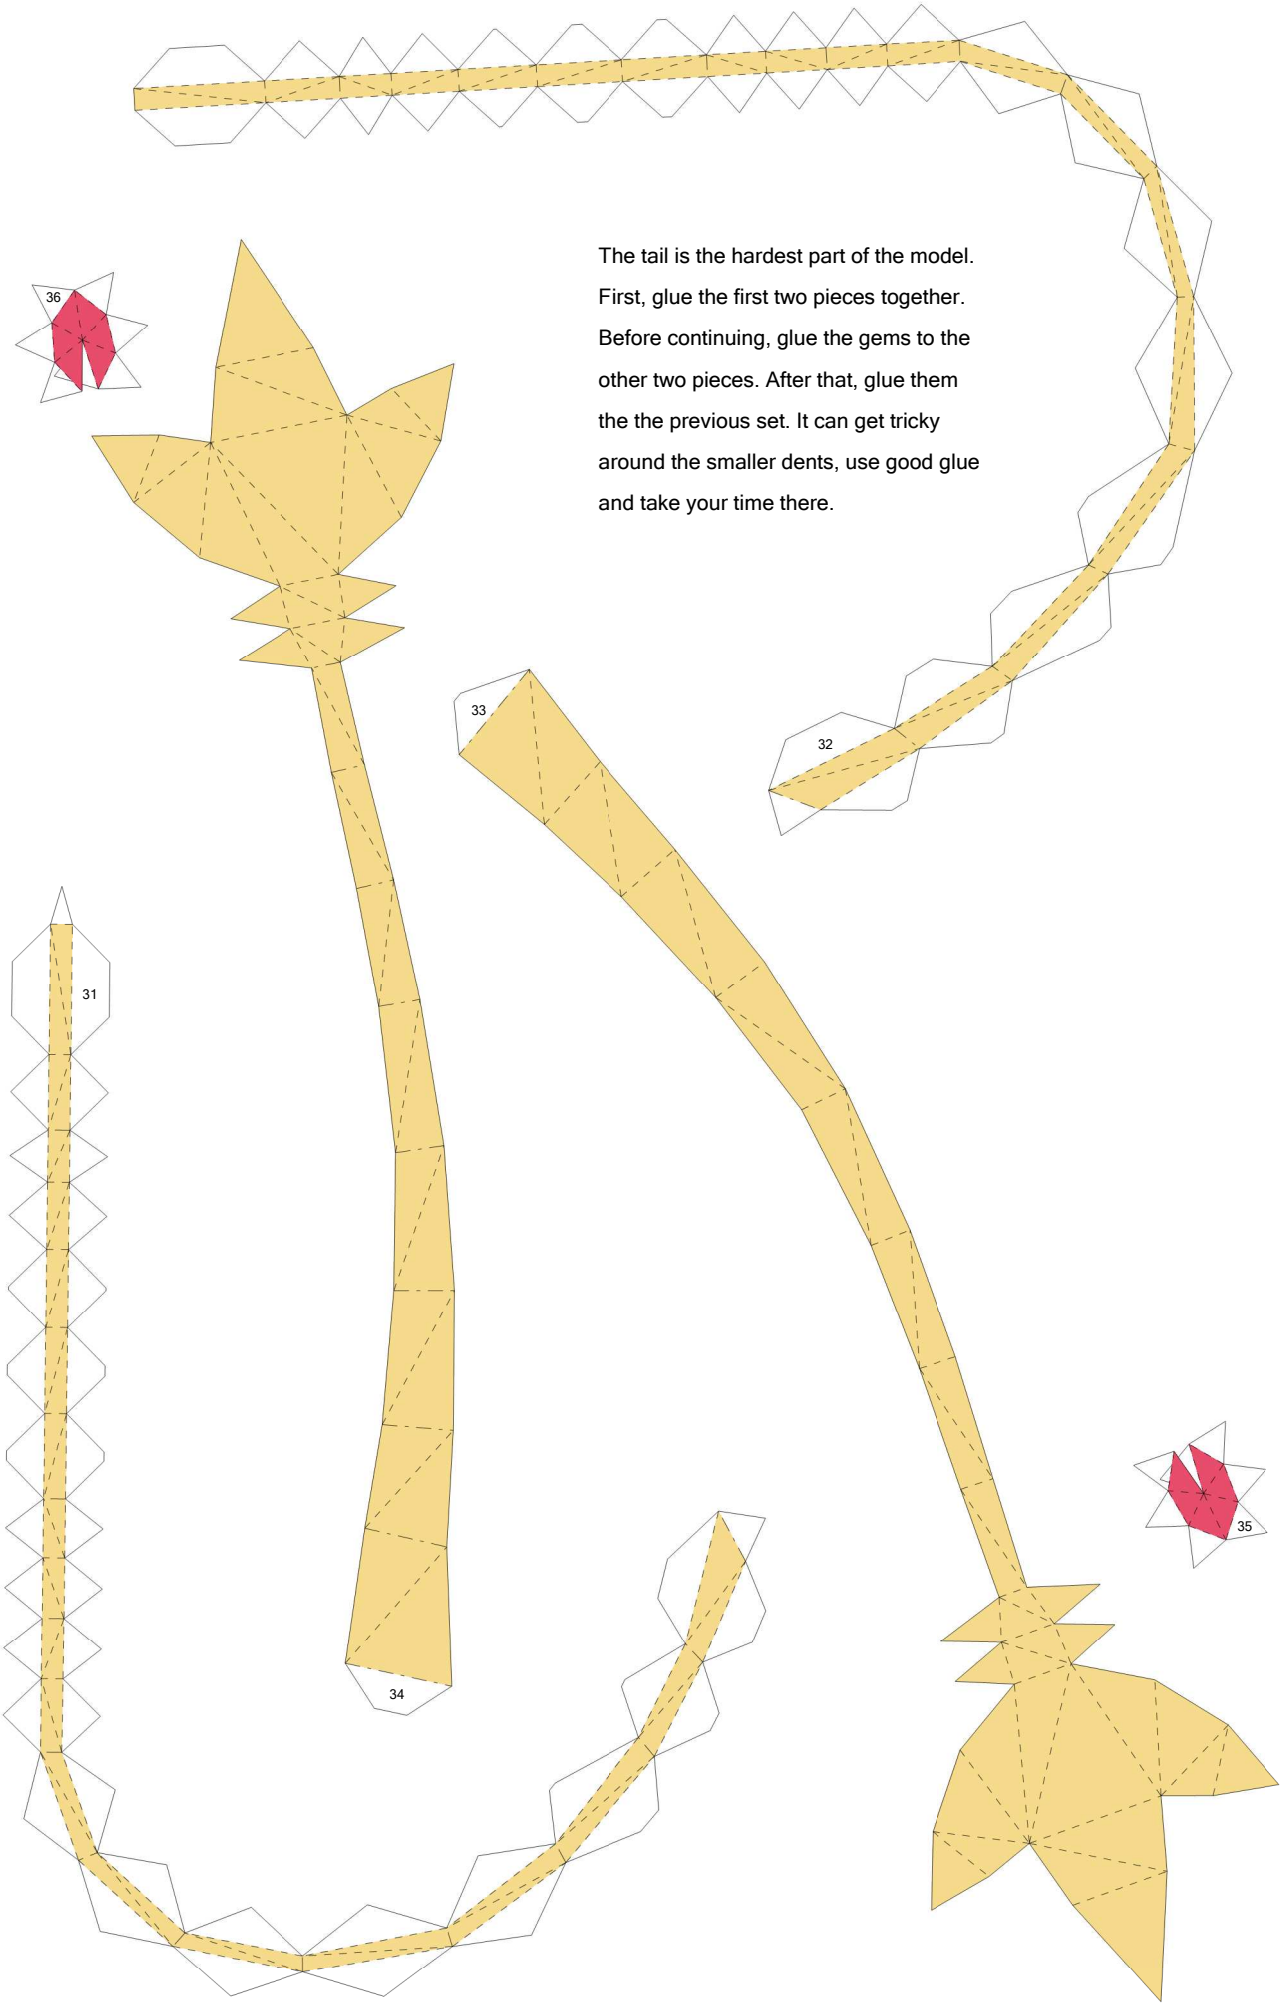




Use this piece 54 in case you want to build the smaller base. Simply glue it using the colored lines as a reference.

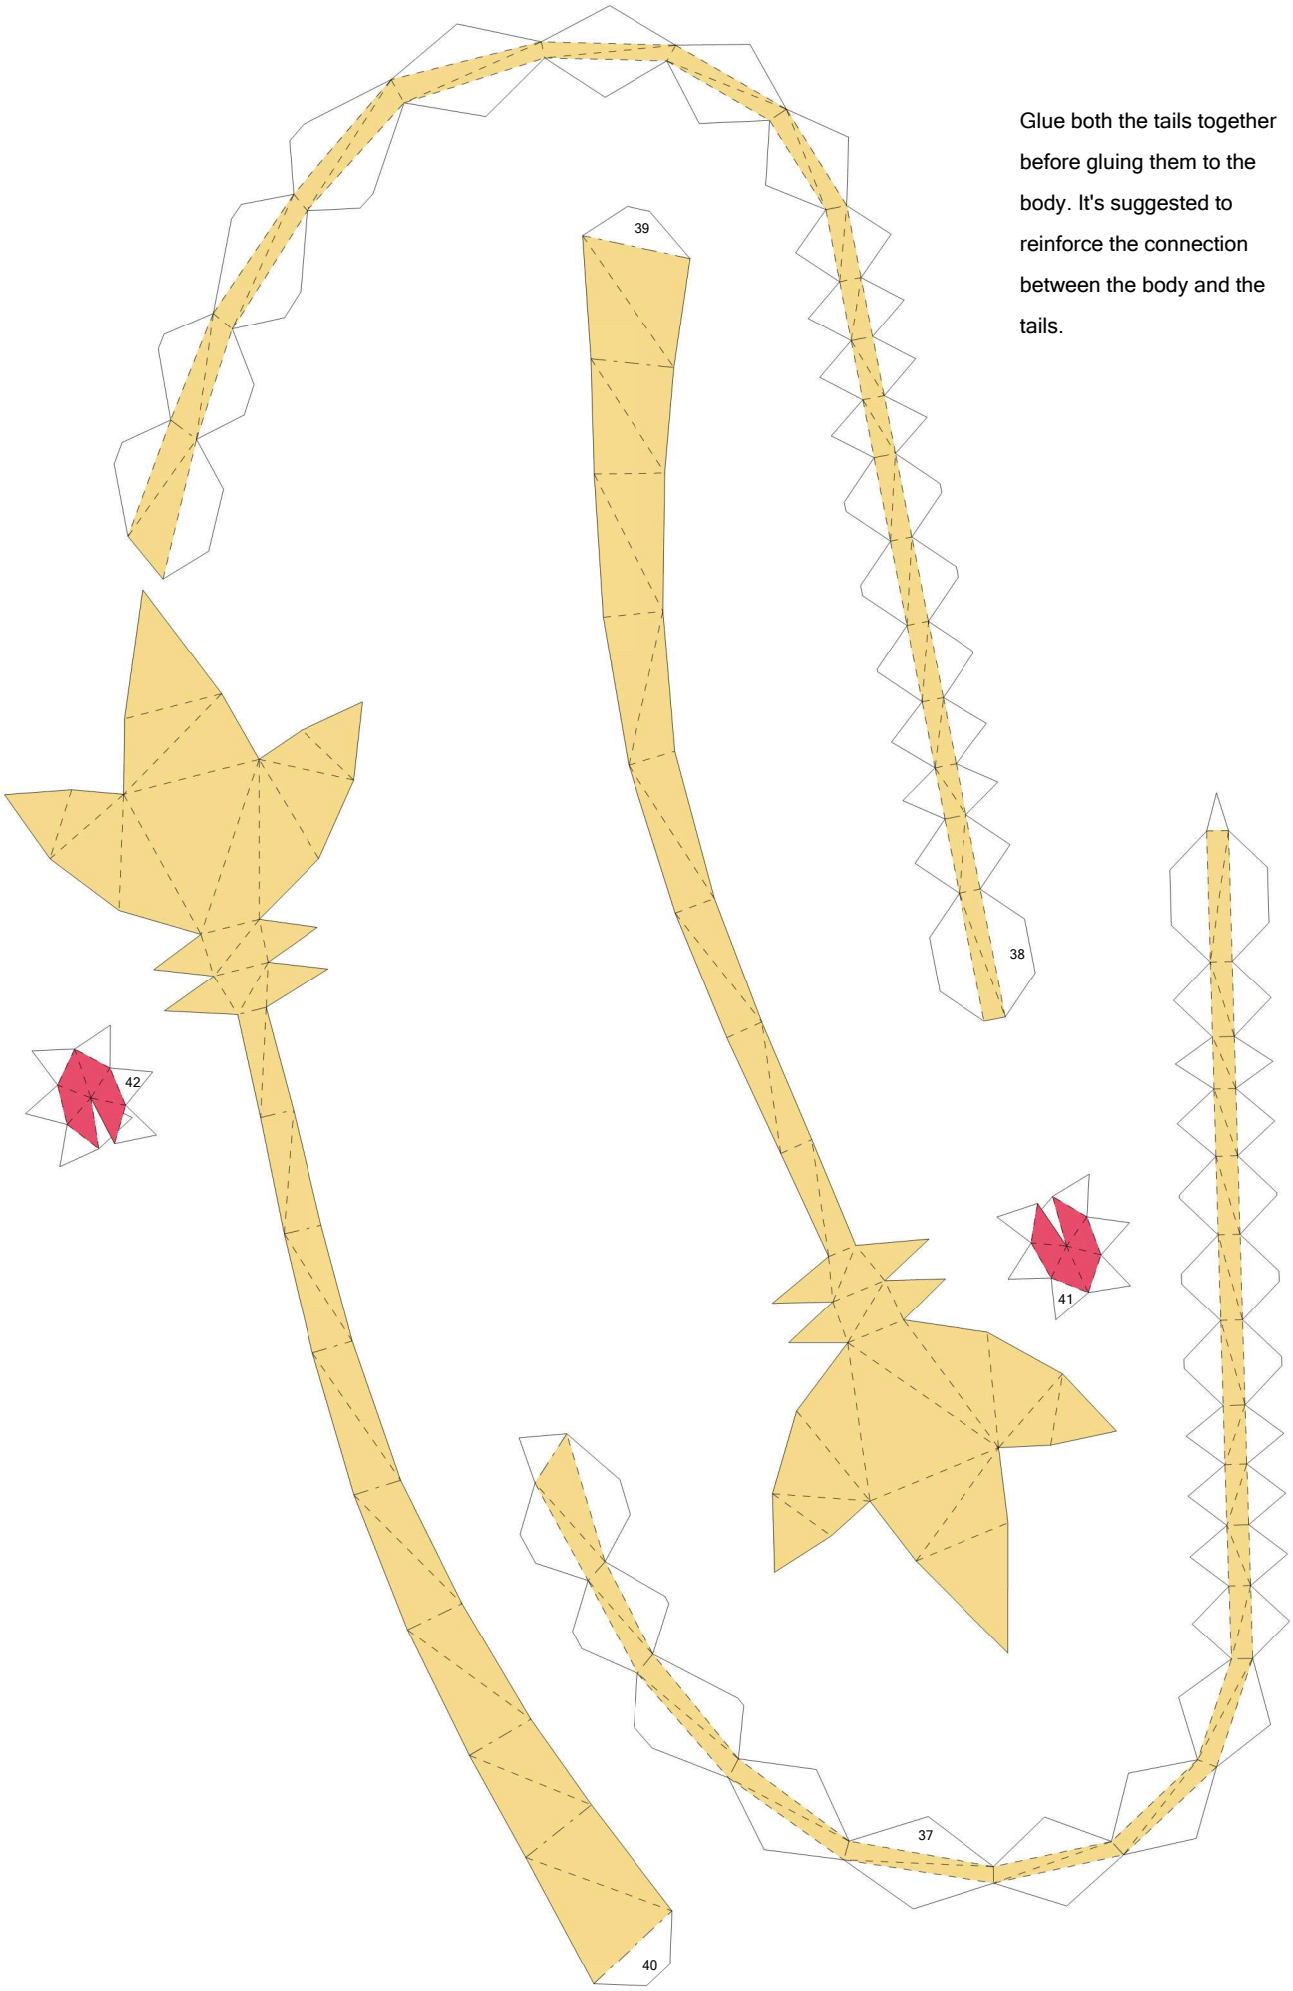


54
(If building the smaller base)

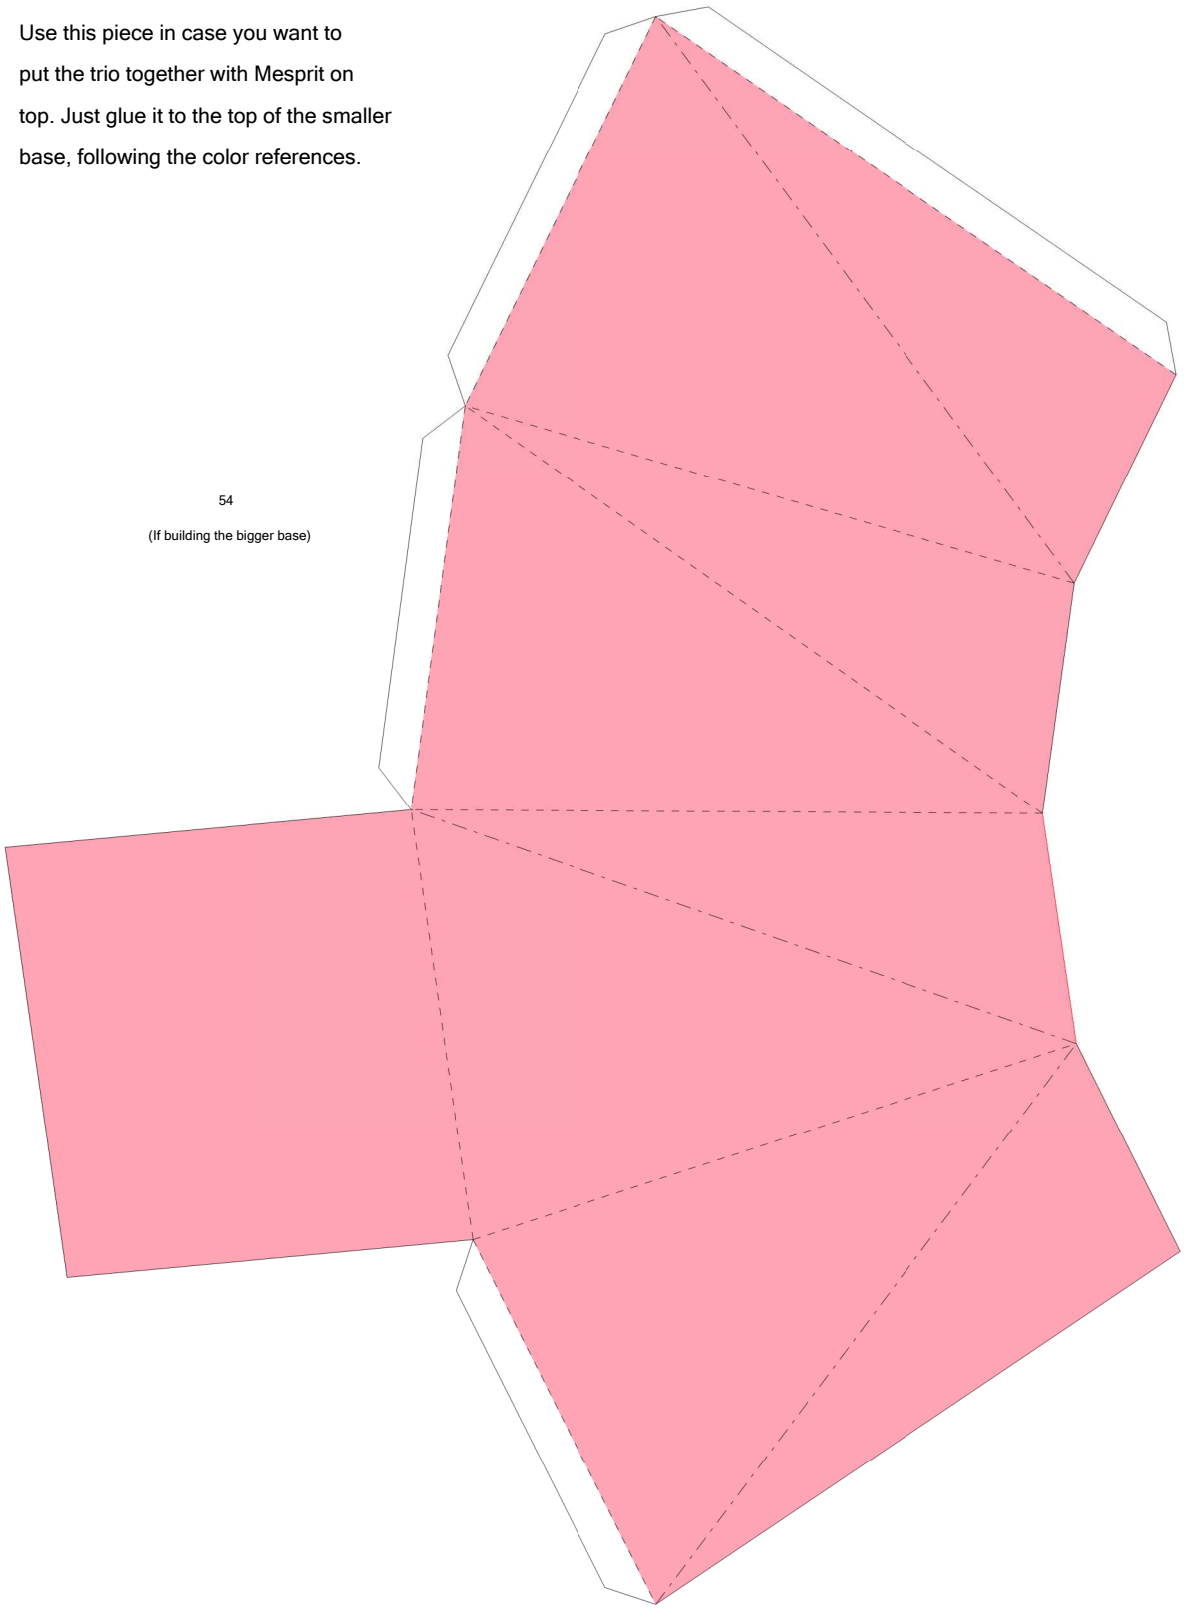


The tail is the hardest part of the model. First, glue the first two pieces together. Before continuing, glue the gems to the other two pieces. After that, glue them the the previous set. It can get tricky around the smaller dents, use good glue and take your time there.

Glue both the tails together before gluing them to the body. It's suggested to reinforce the connection between the body and the tails.



Use this piece in case you want to put the trio together with Mesprit on top. Just glue it to the top of the smaller base, following the color references.



54

(If building the bigger base)
