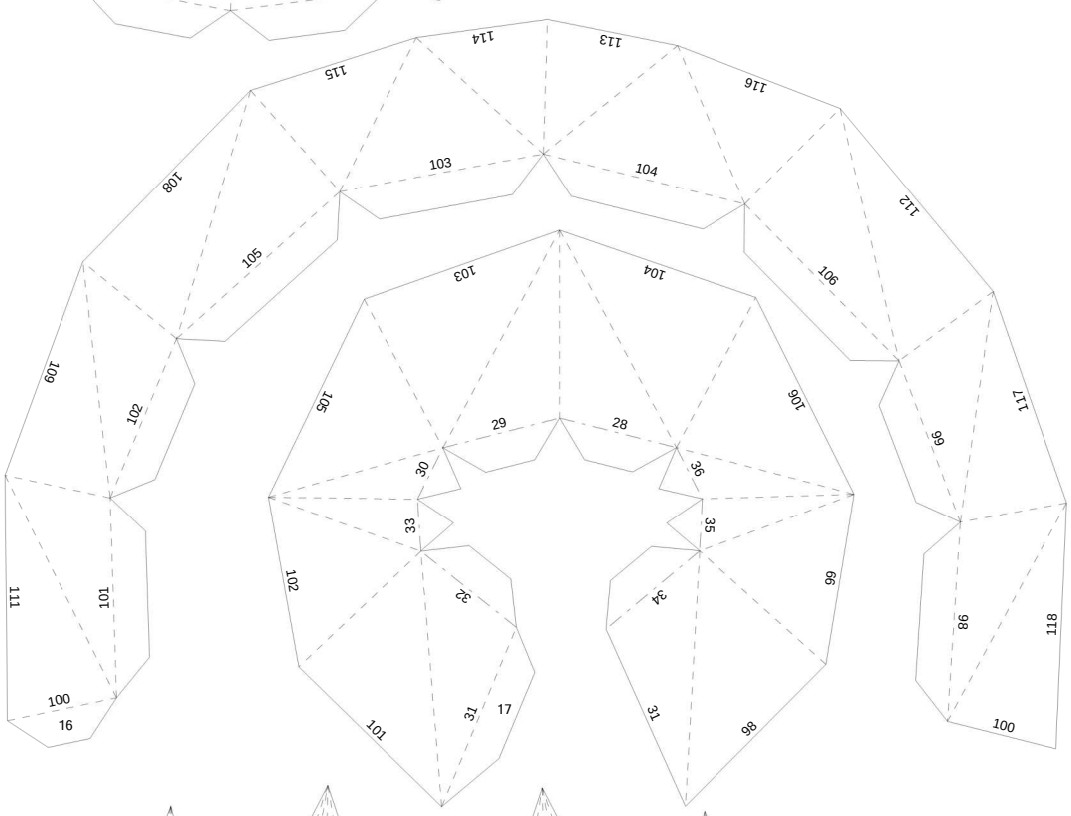
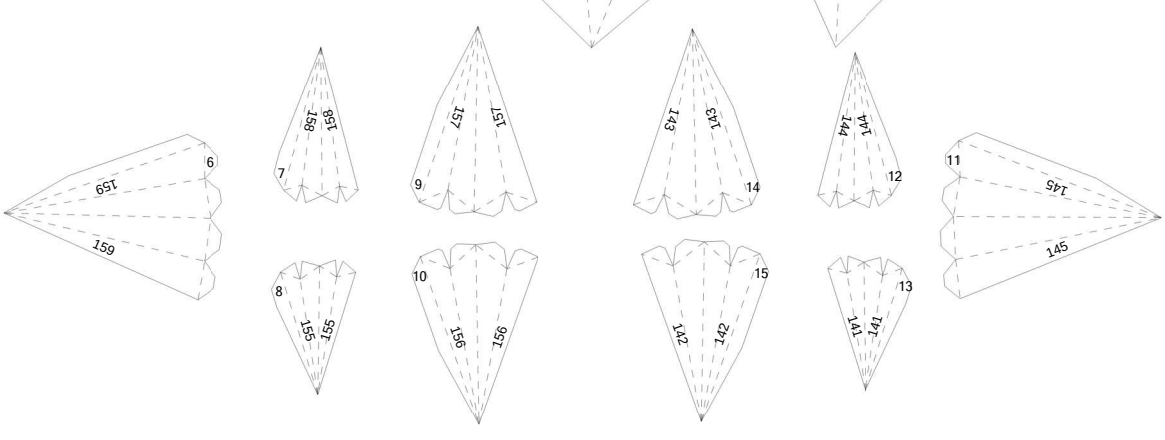
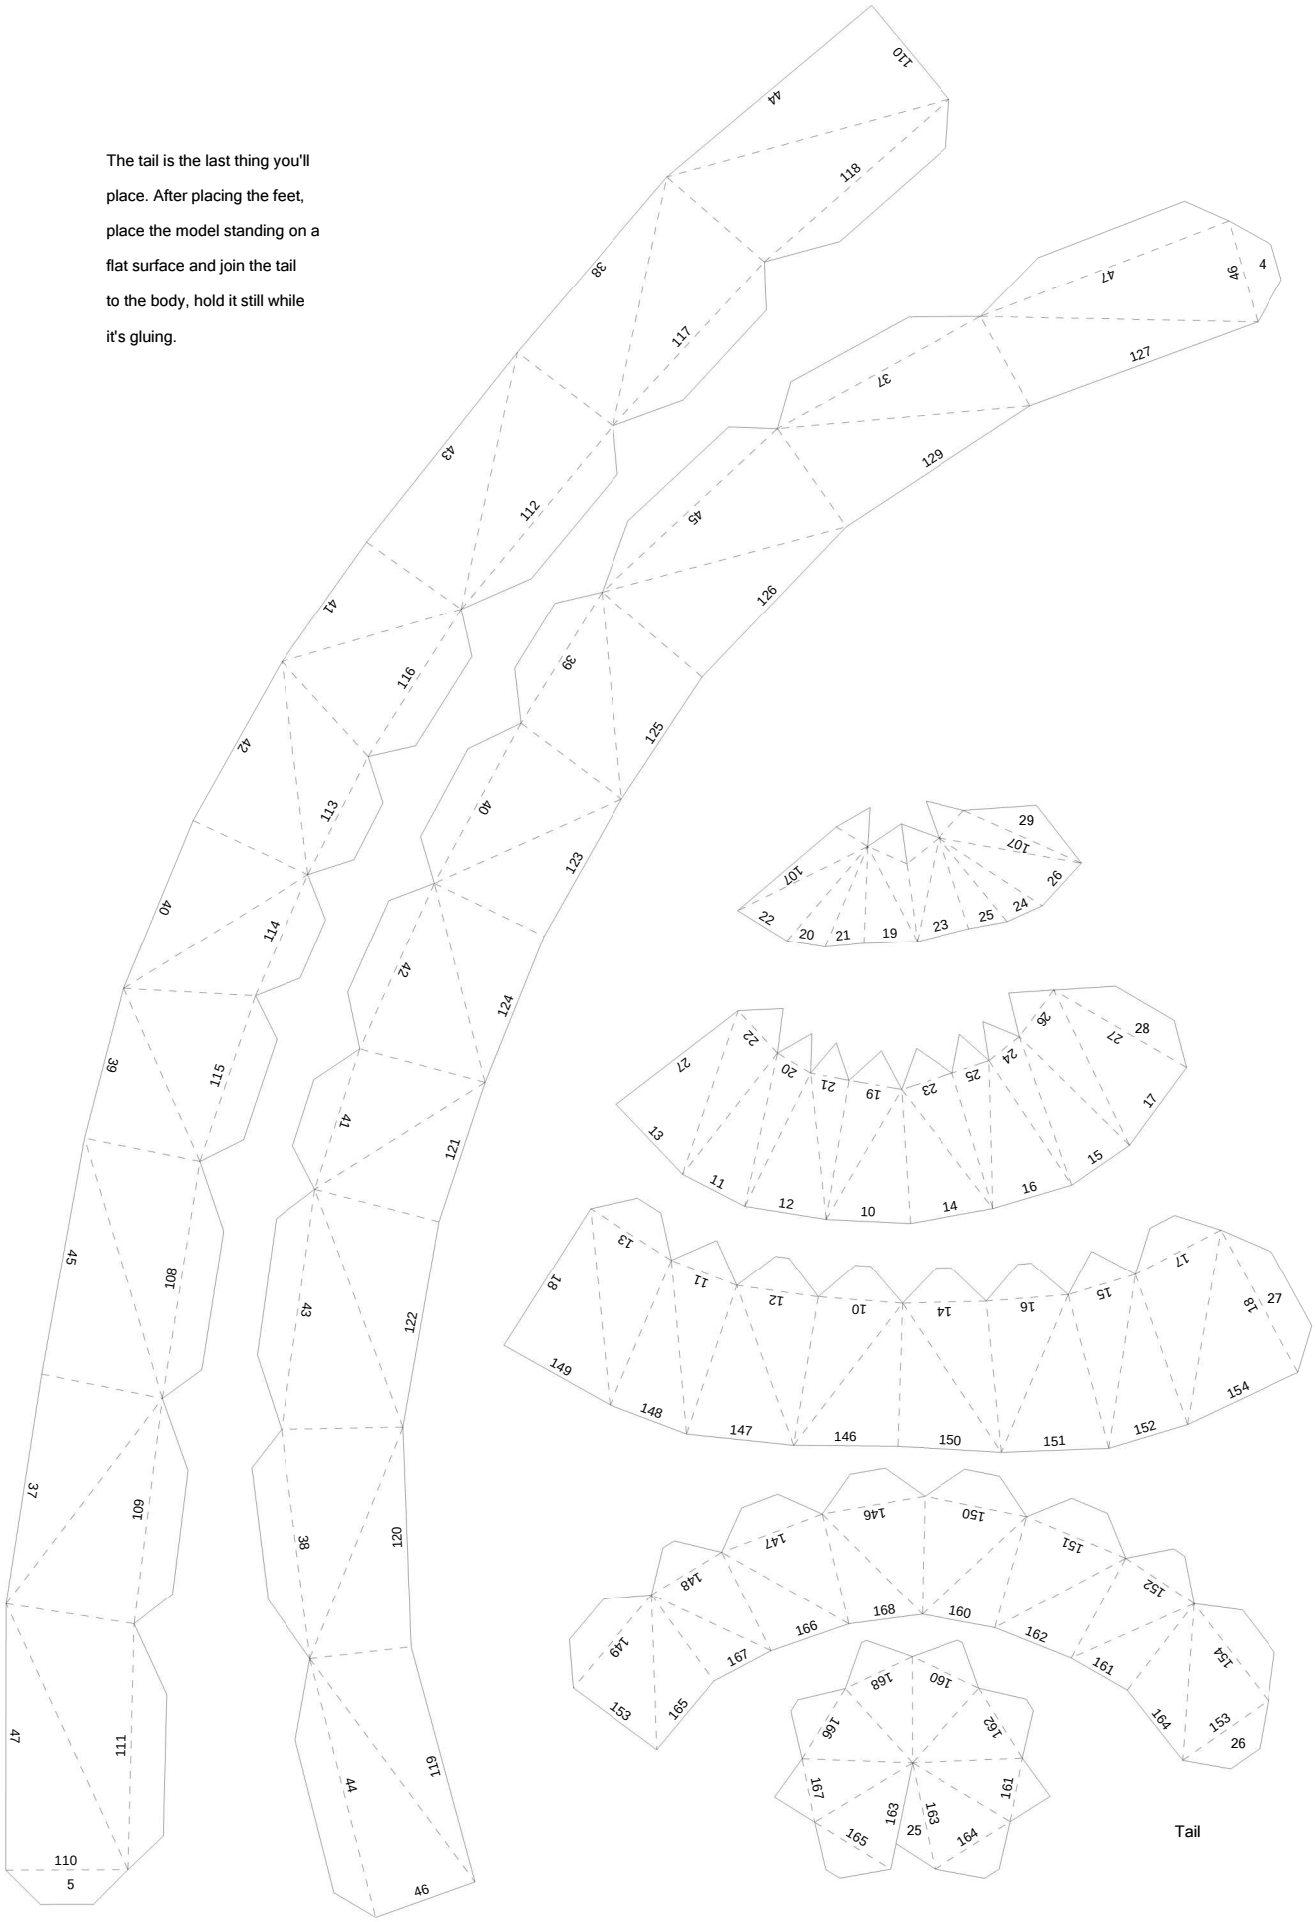
Start at the head. Add the gills as soon as they are built. They are the hardest part of the model, but still really easy. Just build the main part and add the other 4 small on it, starting by the smaller ones. Continue building by the numbers and it will be really easy.

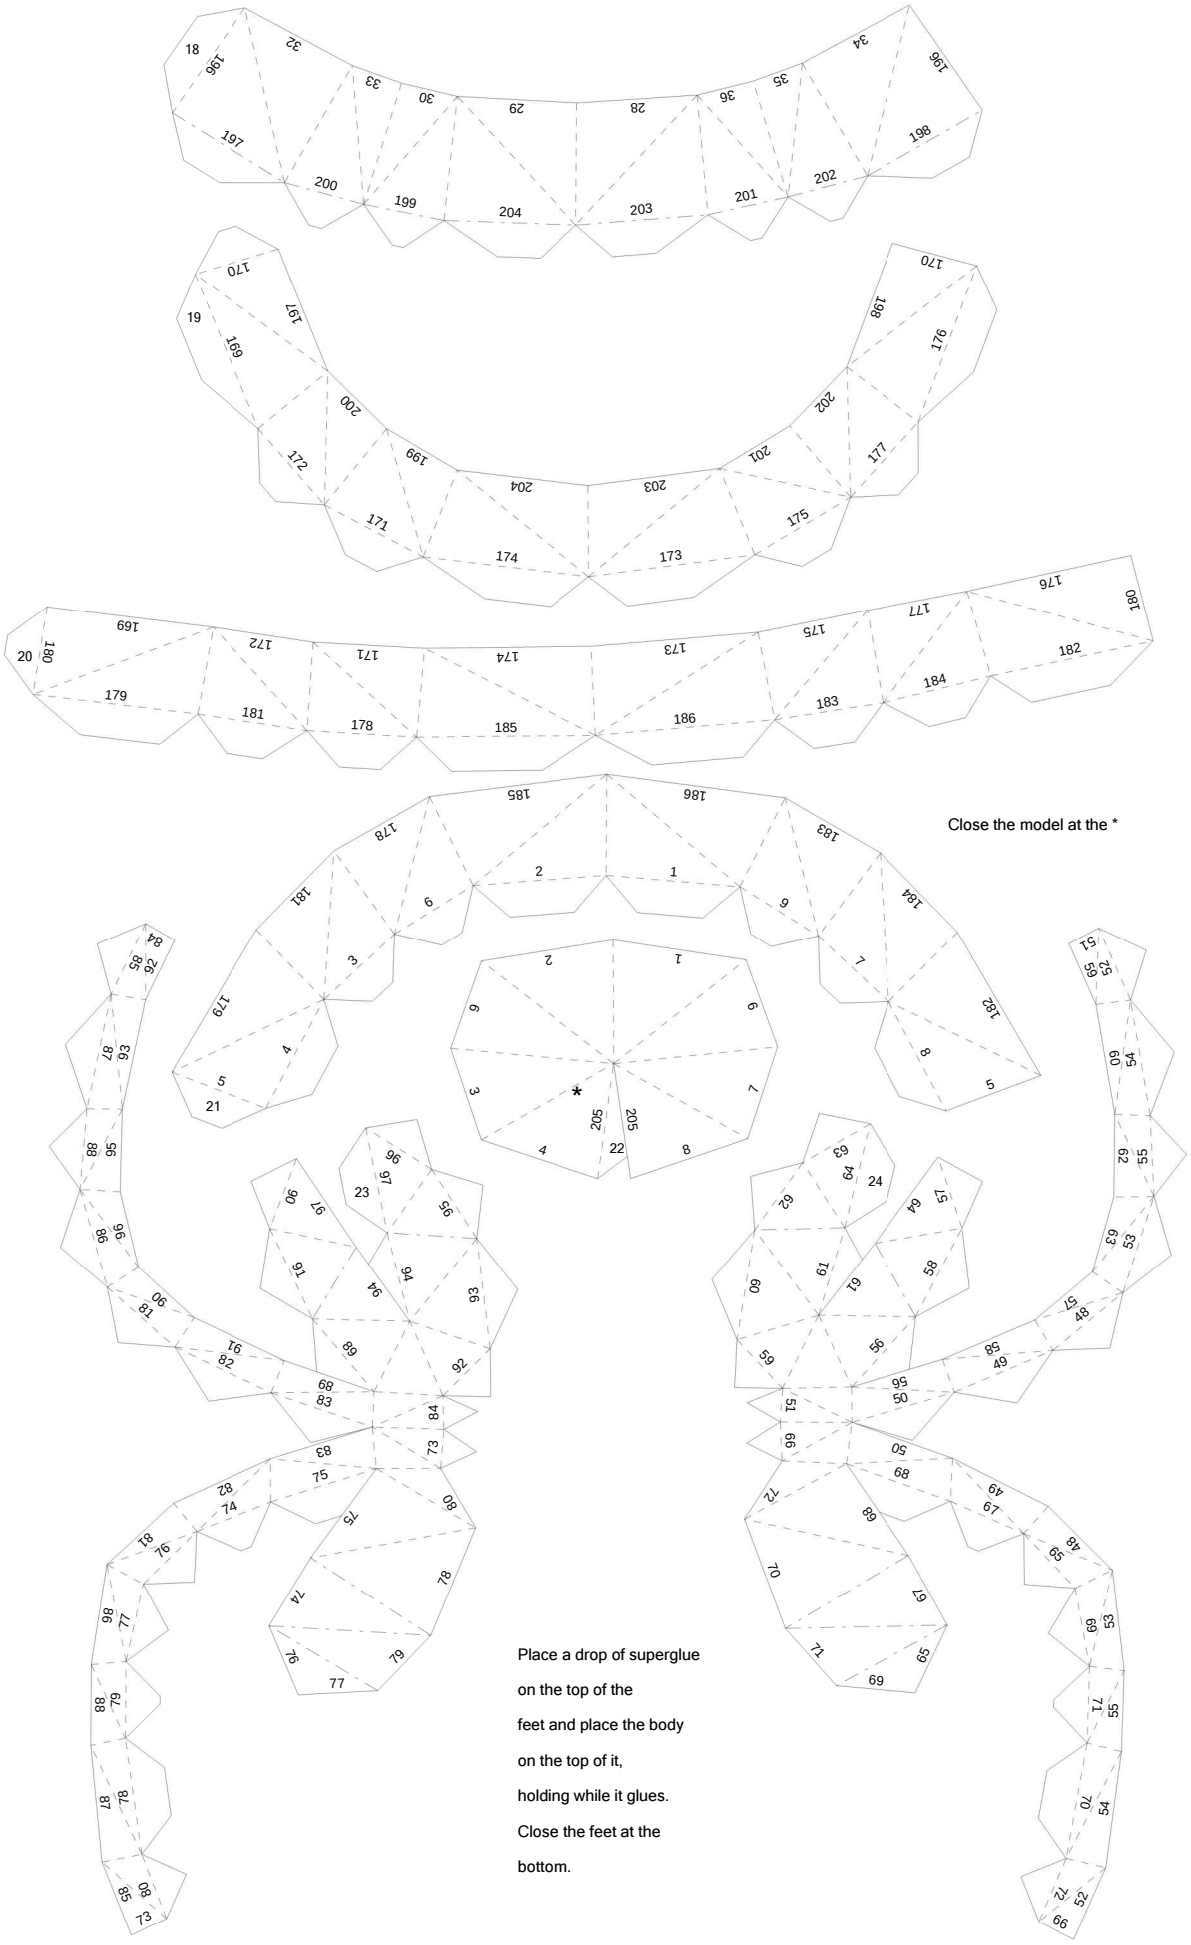




The tail is the last thing you'll place. After placing the feet, place the model standing on a flat surface and join the tail to the body, hold it still while it's gluing.



Tail



Close the model at the *

Place a drop of superglue on the top of the feet and place the body on the top of it, holding while it glues. Close the feet at the bottom.
