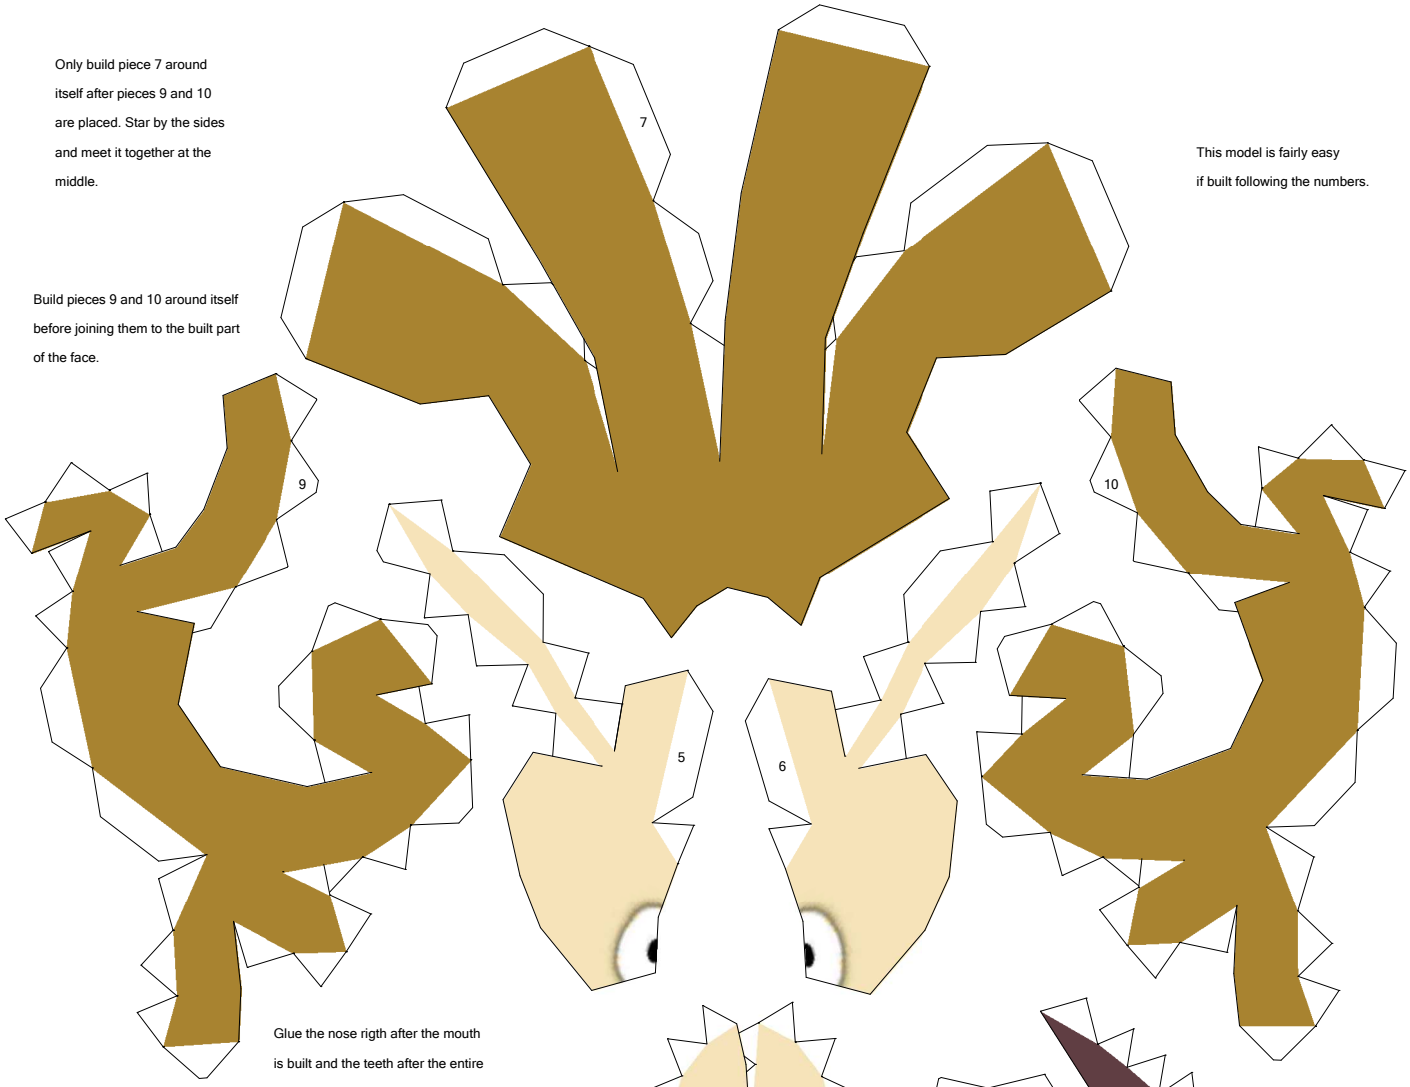
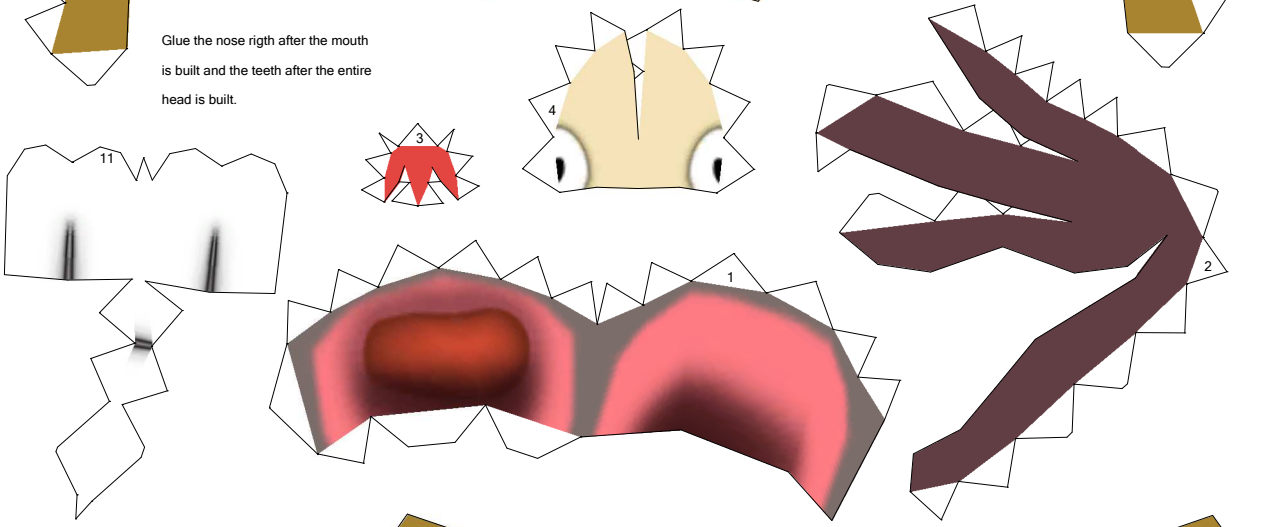
Only build piece 7 around itself after pieces 9 and 10 are placed. Star by the sides and meet it together at the middle.

This model is fairly easy if built following the numbers.

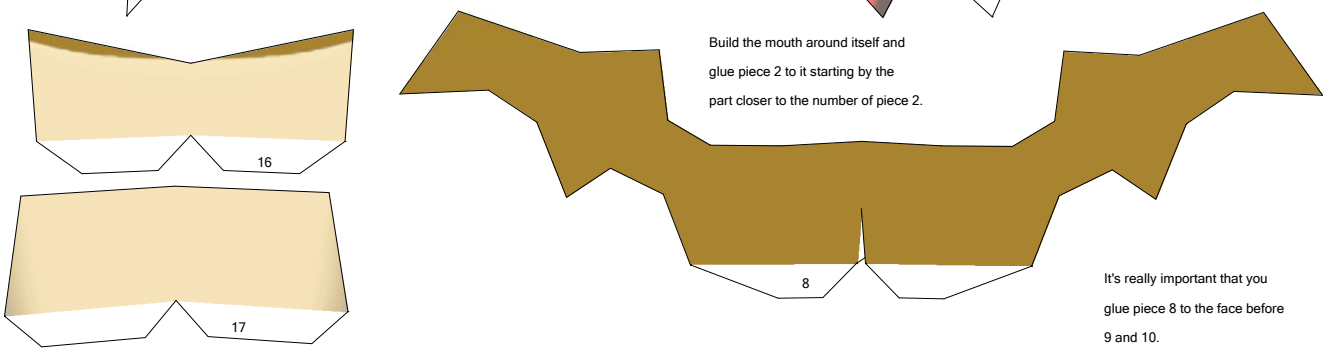
Build pieces 9 and 10 around itself before joining them to the built part of the face.



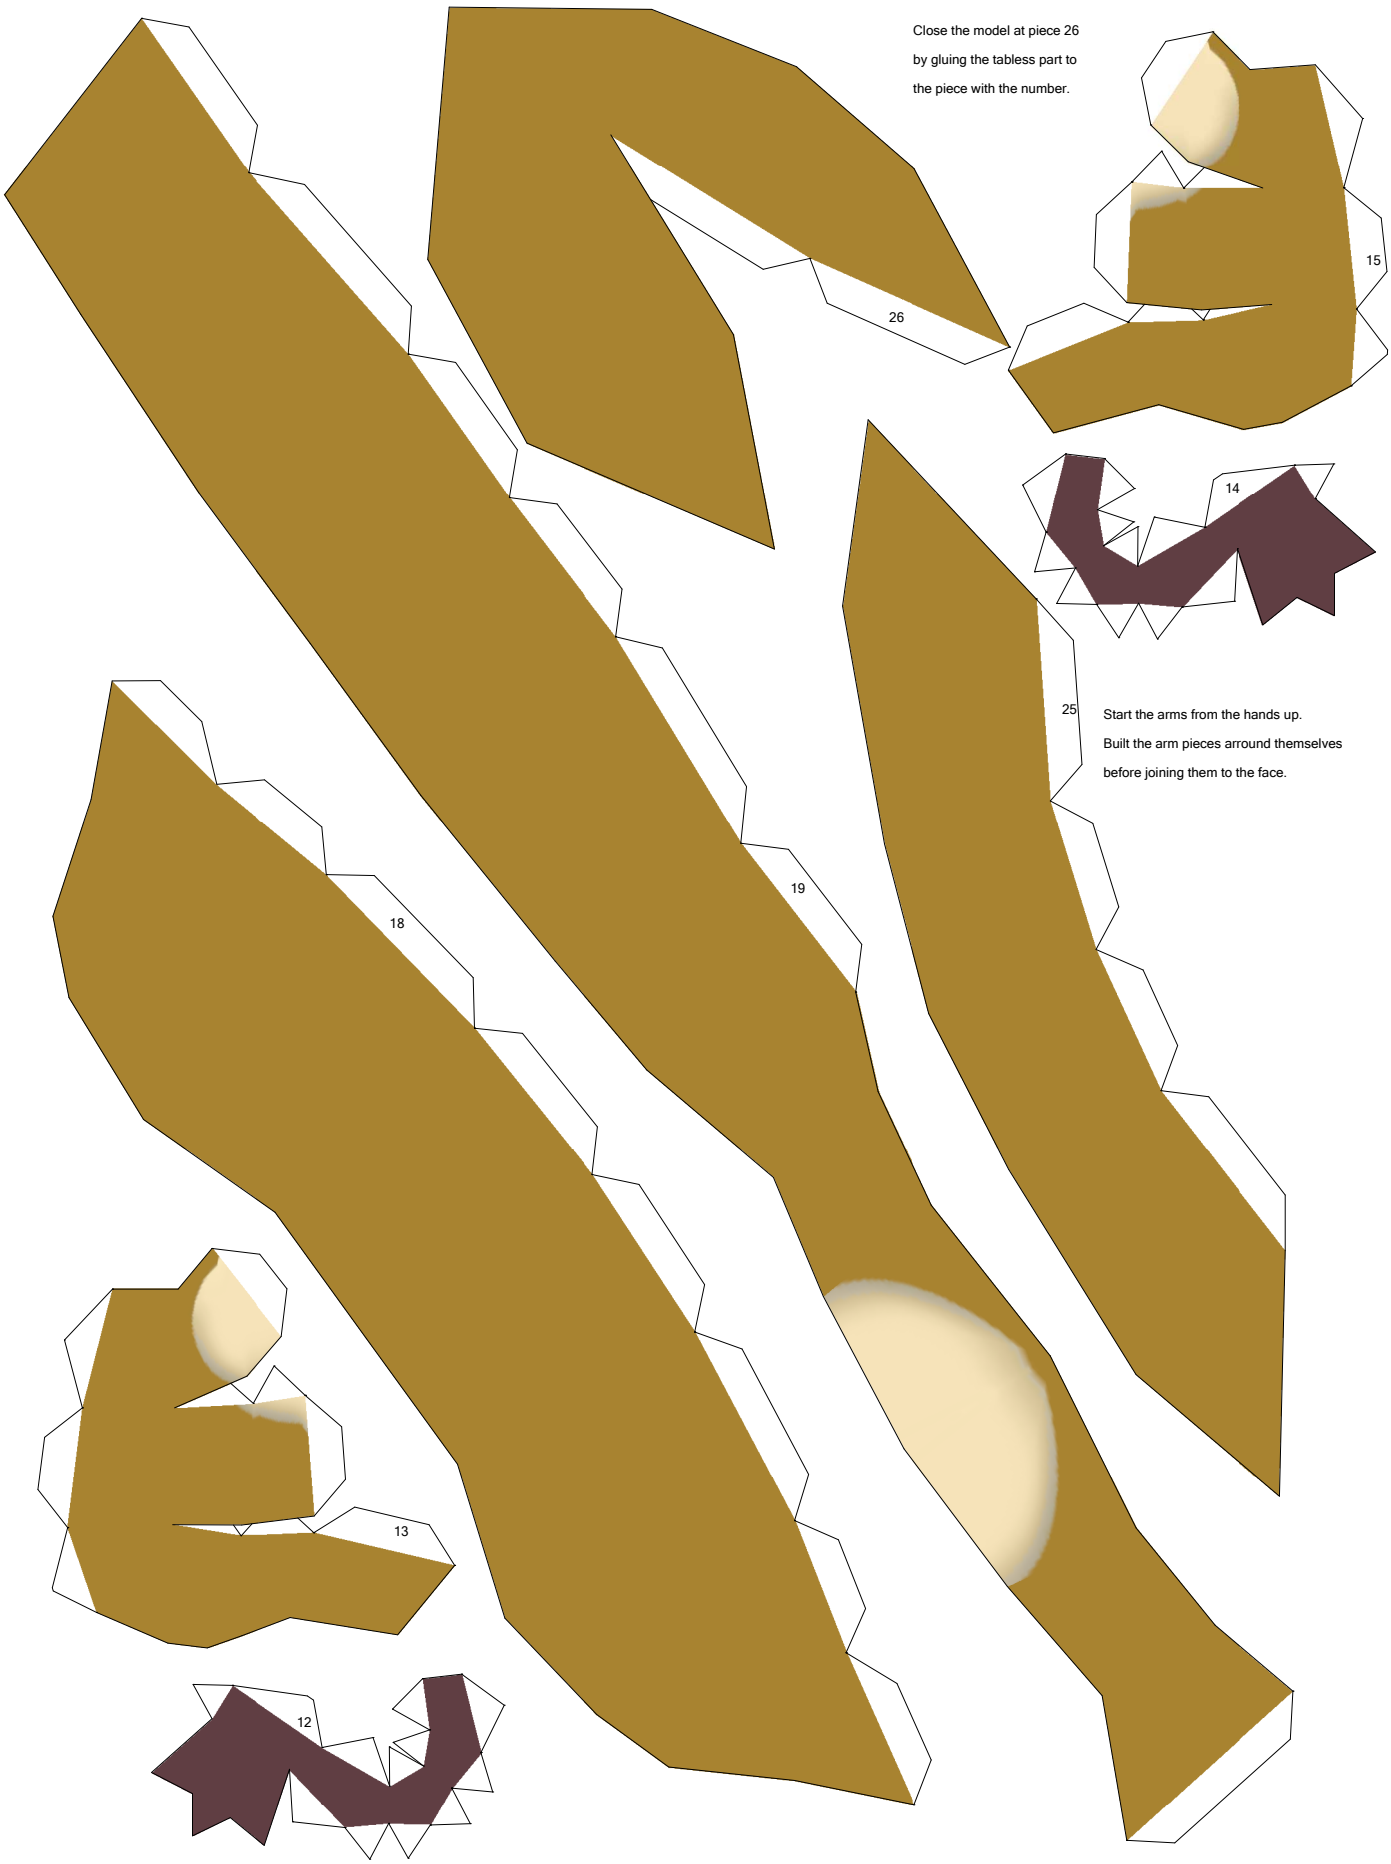
Glue the nose rigth after the mouth is built and the teeth after the entire head is built.



Build the mouth around itself and glue piece 2 to it starting by the part closer to the number of piece 2.



It's really important that you glue piece 8 to the face before 9 and 10.



Close the model at piece 26
by gluing the tabless part to
the piece with the number.
26

23
Build the legs starting by the feet.
Build both of them and join them with
with piece 24 and glue the entire set
to the built part.

Build the tail starting at the top and build it around itself closing at the bottom. Glue it after the model is closed. The tail is free to be positioned however, but will sit balanced the best in a flat position on the ground, like showed on the pdo.
