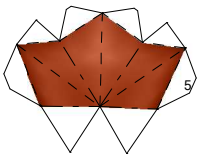
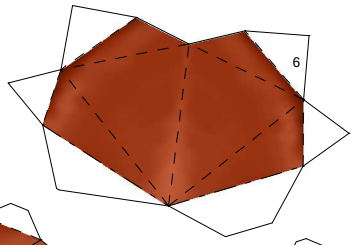
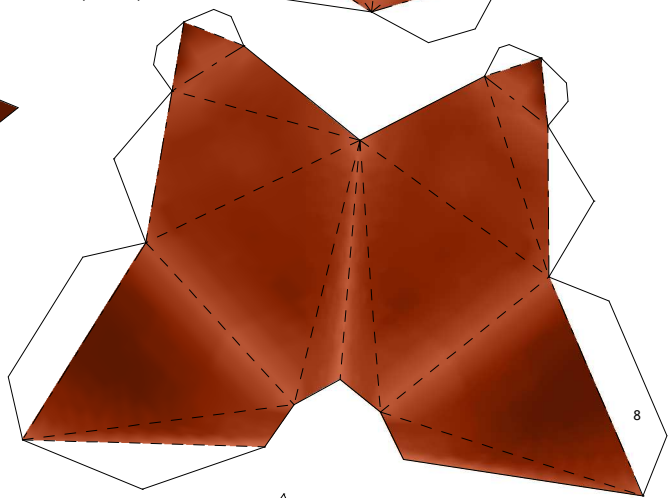
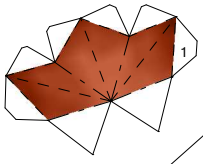
Since the hat is spiky, I suggest folding the acute angles, specially on the points, the top and the ones that goes straightly from the top to the tips.

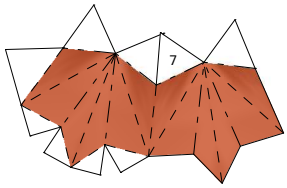


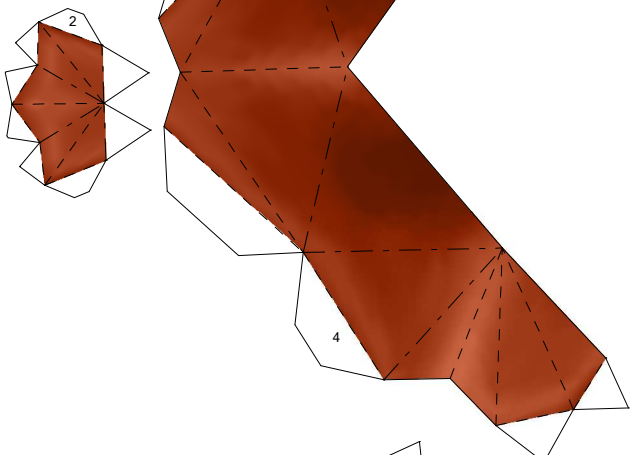


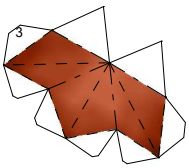




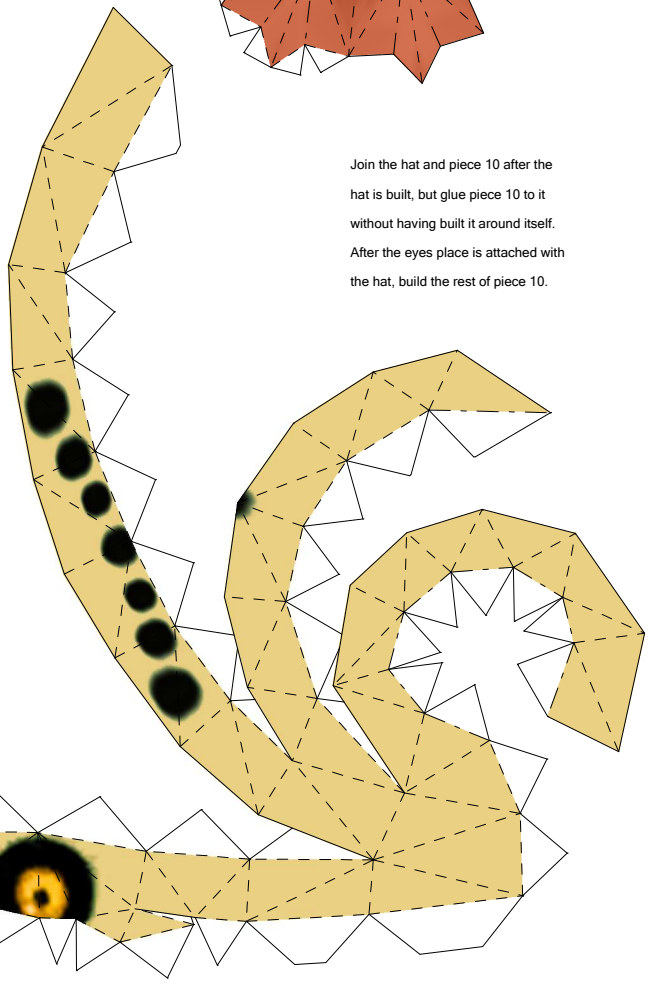
Follow the numbers while building the hat and close with piece 9. The closing of the hat is the only trick part of the model. But be carefull and patient and you'll be able to close it properly.

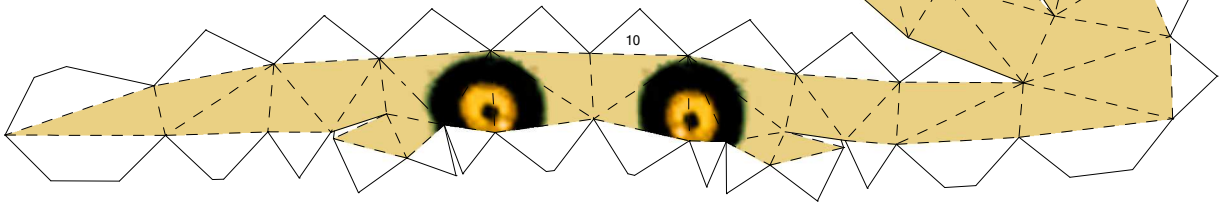


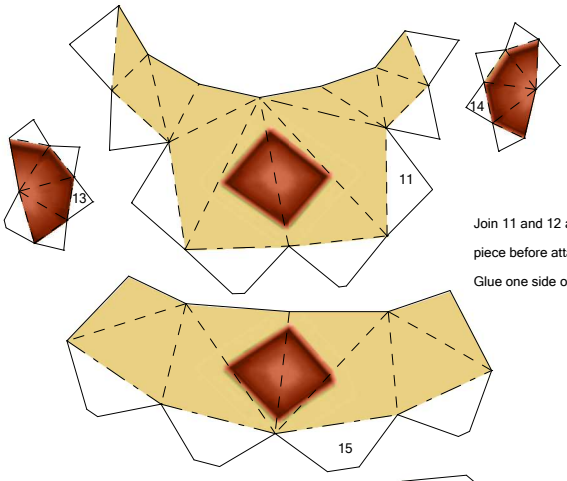


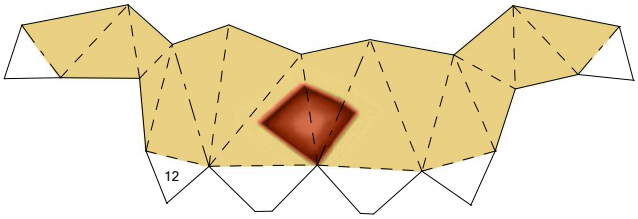


Join the hat and piece 10 after the hat is built, but glue piece 10 to it without having built it around itself. After the eyes place is attached with the hat, build the rest of piece 10.

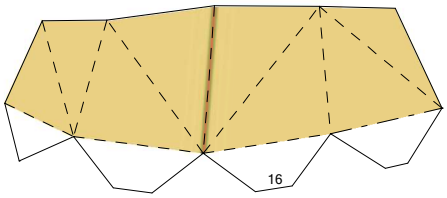


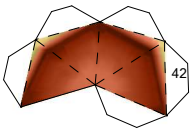


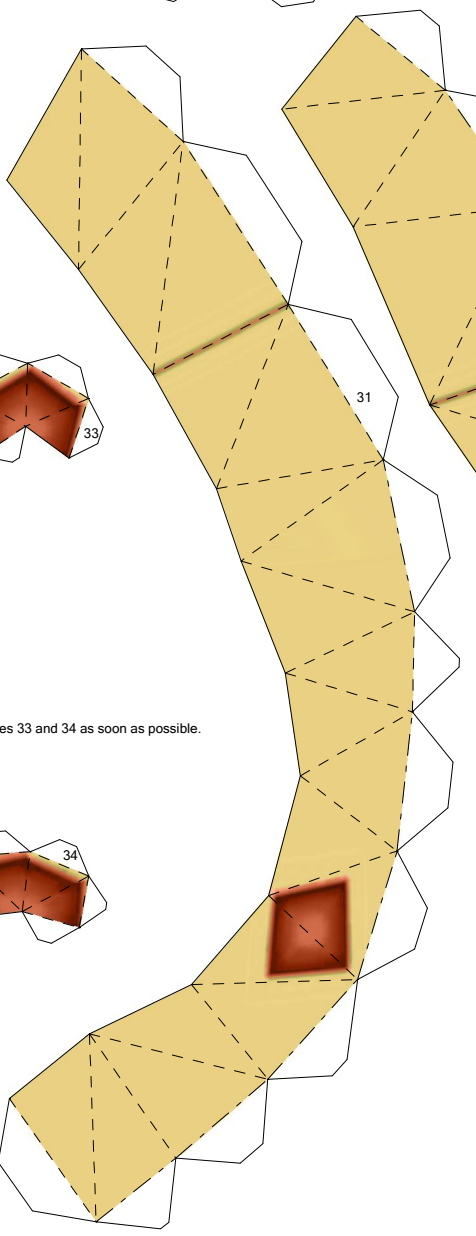




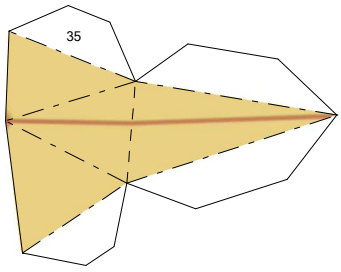
Join 11 and 12 as they were a single piece before attaching them to the head. Glue one side of them together to do so.

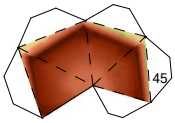






Glue the spikes 33 and 34 as soon as possible.





Build the arms from the bottom up
adding the spikes or as you go
or after the model is built. They go
on the connection of two pieces.

Close the model at the legs. Add the spikes going up up to meet spikes 34 and 33 before closing.
