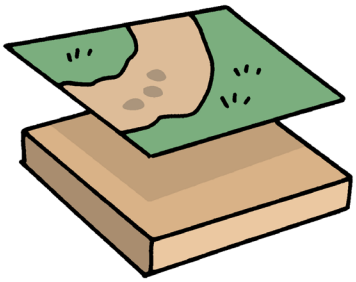
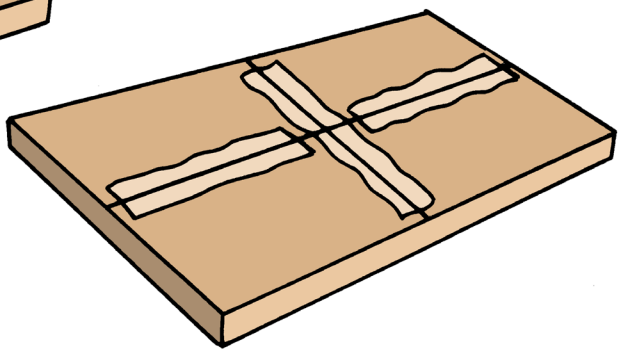
How to set your floor tiles:

There are many different ways. It's up to you to experiment and find what you prefer.

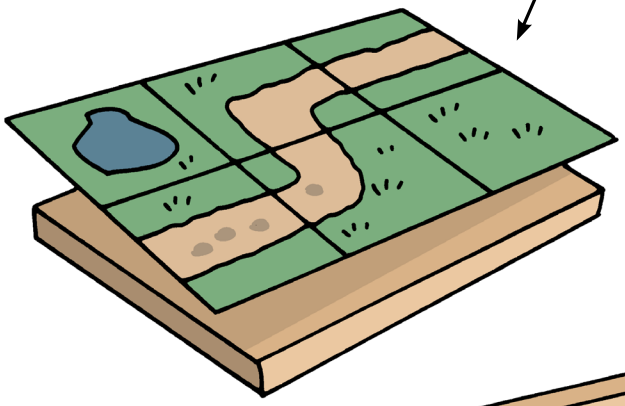
Cut out each floor tile individually and glue them on in place on a piece of cardboard or foam core or display board.



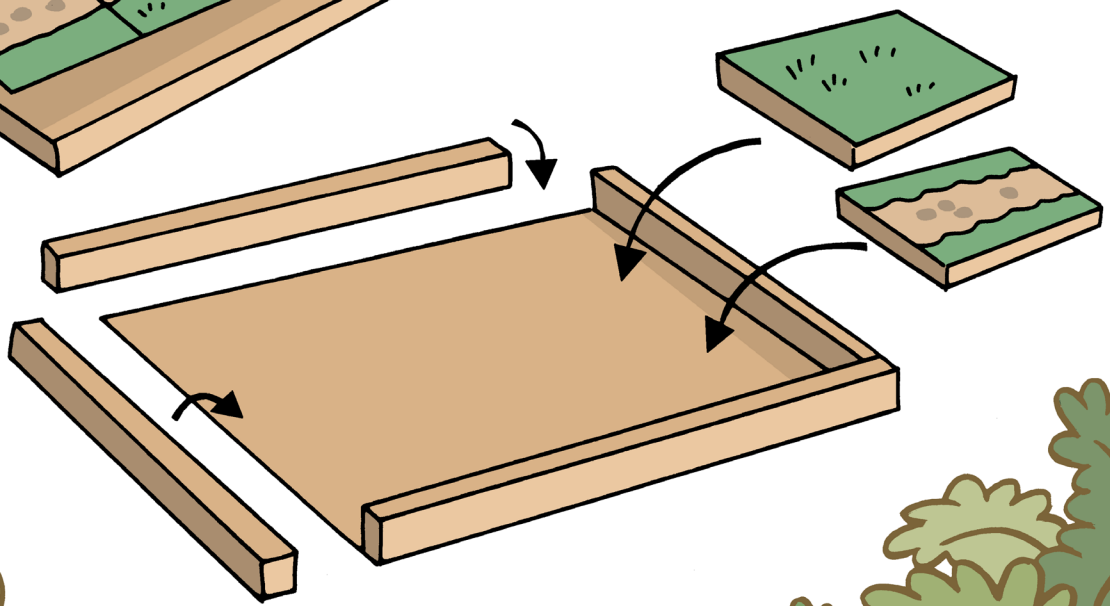
Then you can simple attach them together with a piece of tape on the back. That way, if you like to change their order in the future, it will be easy to cut them apart and re-arrange them .



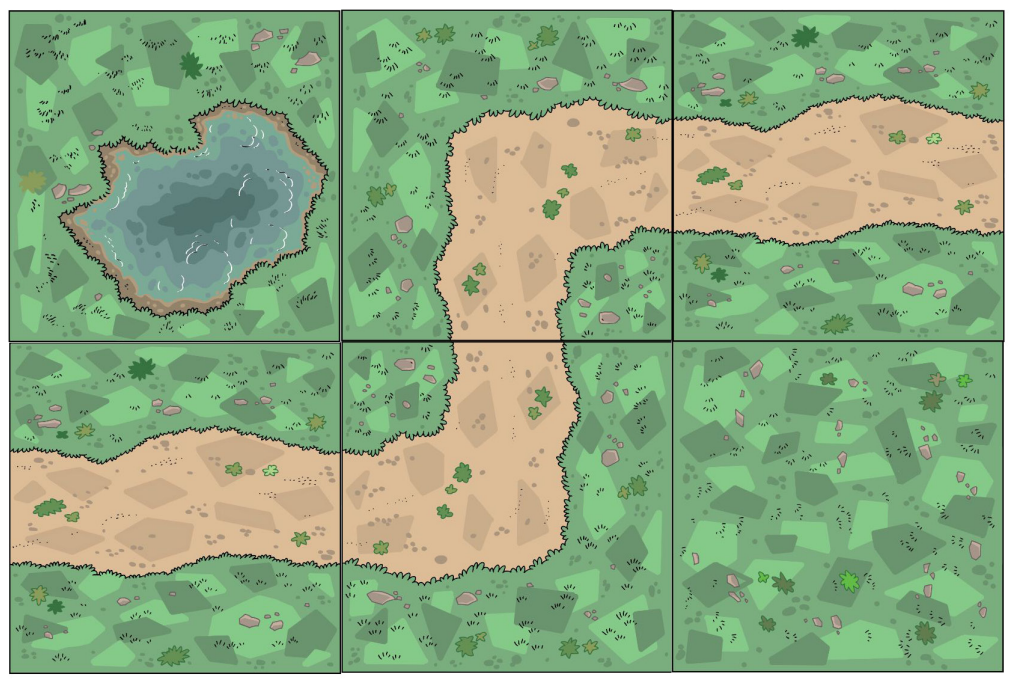
Or you can glue them all together.



Another option is to glue them as above, and to make a short of frame board with cardboard or foam core and set your floor tile inside without gluing them, it will be easy to move them around

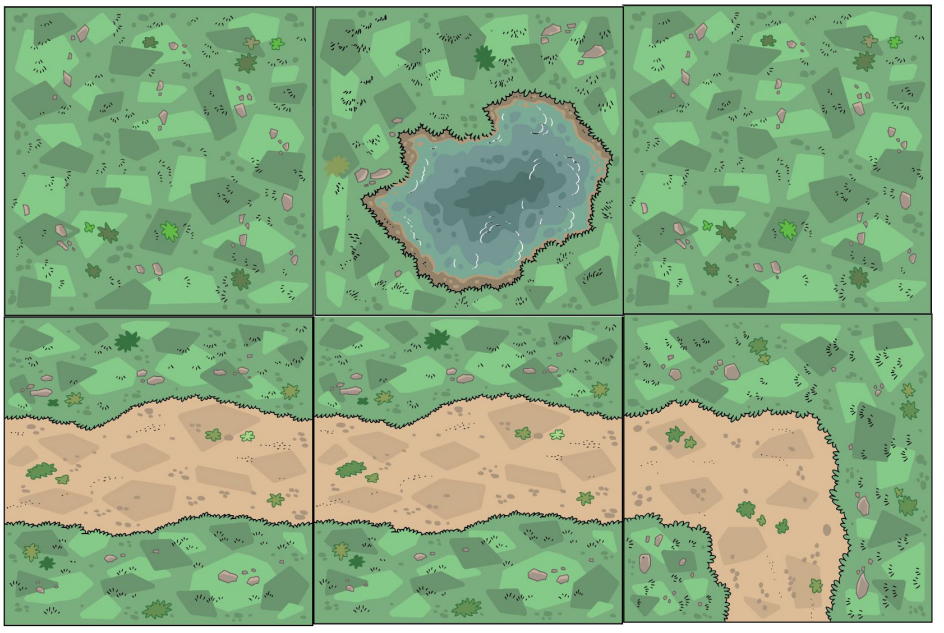


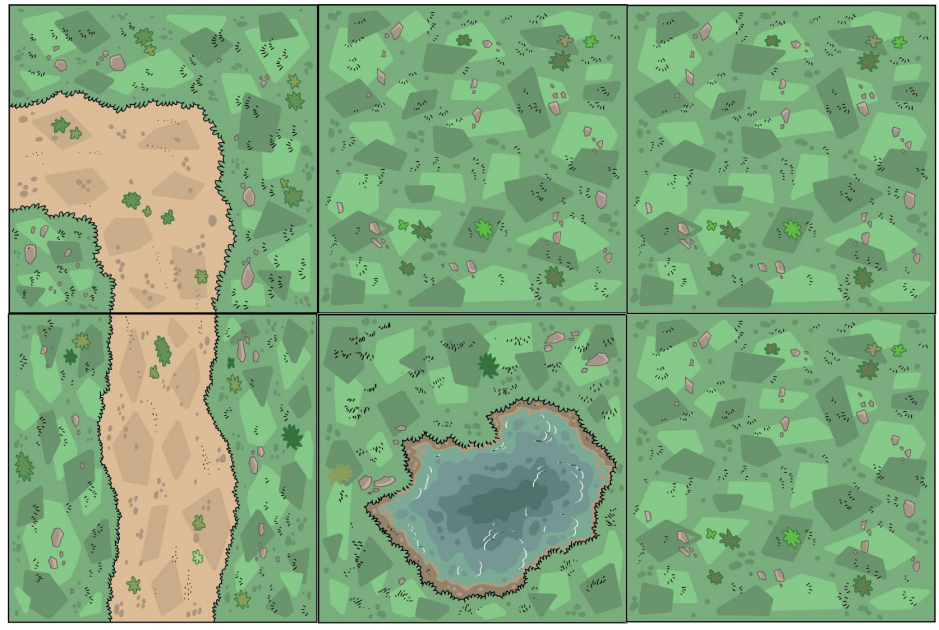
These are just some ideas to try.



Sample ideas for arranging the floor tiles.

There are many other patterns you can create. Simply experiment and try out different ideas. And don't limit yourself to only to six, but print as many as you like.





More floor tiles to come.
