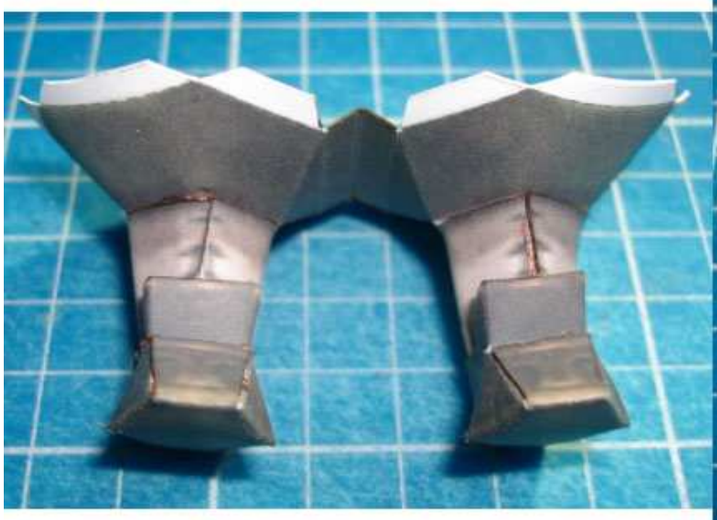
Reference Manual

Cut out parts 1-3 and then assemble as pictured above. Part 3 tabs are glued on top of Part 2 tabs, creating this “Layered Tabs” or “Double Tabs” if you prefer. Simply follow the marked tabs on how to glue them together. Repeat the process on the other foot. You may wish to color the edges with a marker of your choice; as usual I colored the edges with a Brown Crayola Marker, giving the model a slightly rusty/dirty look.



Follow that up, by attaching the feet onto part 7 (left picture), the tab orientation on your build is slightly different from mine, so rest assured it’ll be easier for you to attach the foot onto part 7.

Afterwards, simply attach parts 8 and 9 onto the assembled bottom parts (right picture).

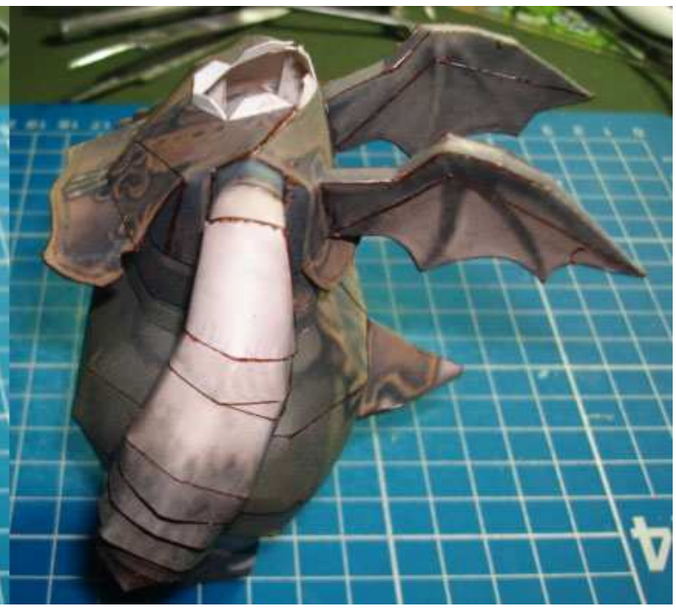
Continue by building the tail, part 10, and simply attach to the hole between parts 8+9 (left picture). Follow that up by attaching parts 11 and 12 (right picture)

Next will be parts 13-18. First start off with part 13, followed by 14. Notice the marked tabs? Glue part 15 onto part 14 creating that Layered effect once more, followed by part 16 to finish up on the front chest piece. Now simply attach on part 17 to finish things up here. (upper left, lower left and lower right pictures). Part 18, is glued onto the marked tabs located on part 13, follow the numbers indicated on these tabs. (upper right picture)

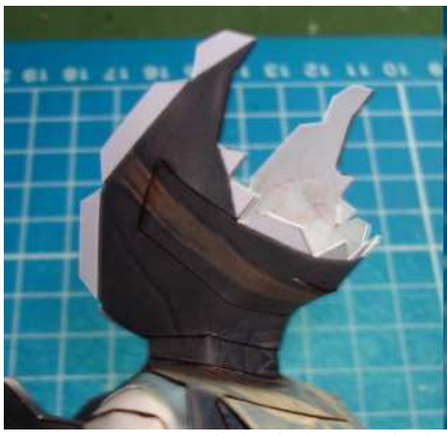
Cut out part 19, and then simply build the wings, parts 21-26. Work on 1 wing at a time to avoid mis-matching parts. Assemble part 21; notice there are additional tabs on it? That's where you glue on parts 22+23. These wing parts are back to back, so once you have the first wing assemble, just cut out the excess textures to give it a more "bat like" wing appearance. Repeat on the 2nd wing. DO NOT attach this completed back assembly onto the model just yet, finish the arms first before doing so.

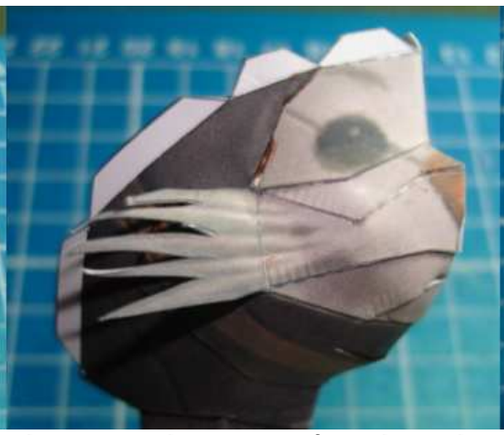
I jumped the gun and just built the arms right away, so I don't have step by step pictures of these parts. However, simply follow the part numbers, Right Arm parts 27-37, Left arm 38-48. Since you've already seen what Double tabs are, then attaching those parts for the arms would be easy to do now. Refer to the .PDO or the pictures above to help you out.

It's relative easy, just take your time, dry fit the parts if you're unsure how it goes. If all things fail, refer to the .PDO, that's what it's used for, so use it wisely.



Once you managed to assemble and attach the arms, it's time to close the body by attaching the back part that you previously assembled (the one with the wings). Start off by gluing one side of the arms onto the back piece, working your way to the opposite side by gluing the bottom tabs onto the back part. To make this easier, don't glue the upper tabs that connect to part 17, leave those tabs for last once you have all the bottom tabs, and the side tabs glued on securely onto the body and arms.

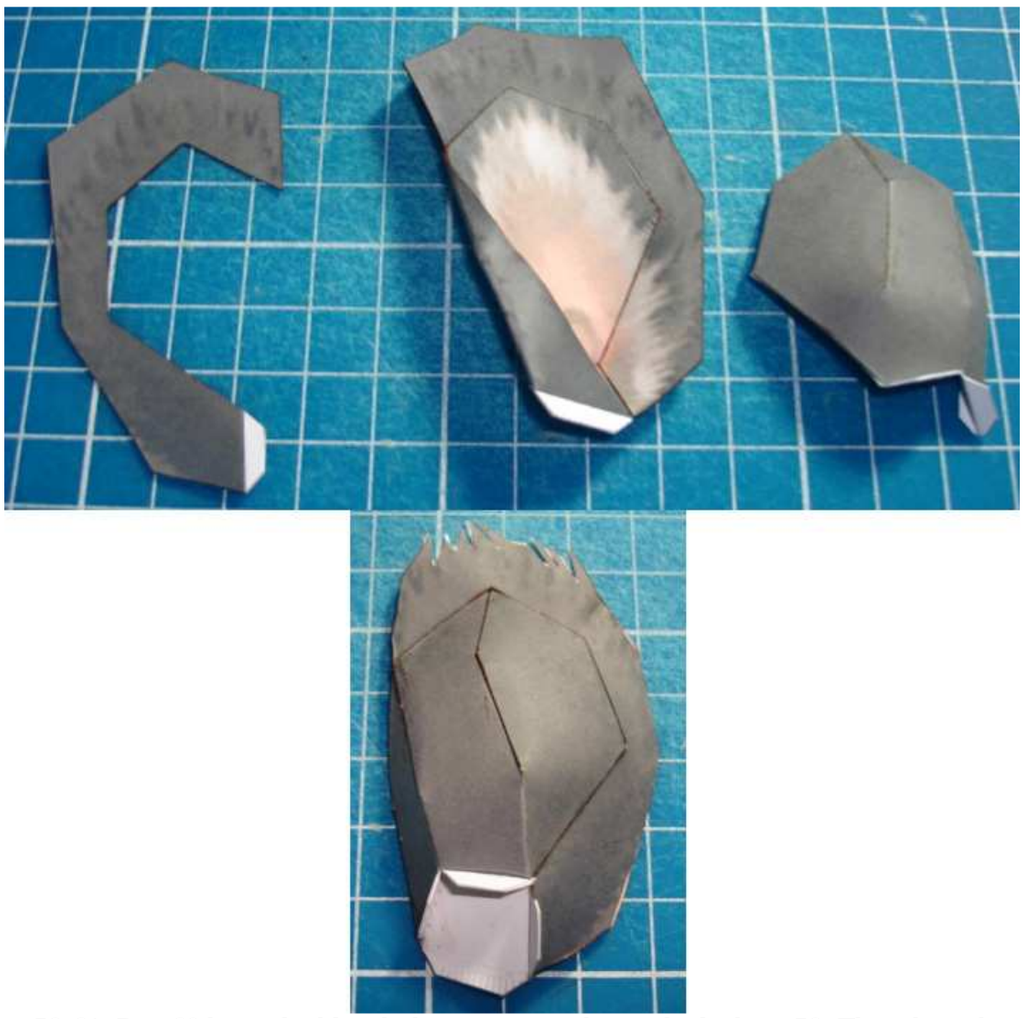




Once you accomplished closing the body, just attach part 20 to form the neck. Follow this up by attaching parts 49+50 (left picture).

Now that you have the basic shape of the head, simply assemble the face SEPERATELY, from the head. It's easier this way than fiddling with the entire body anyway. Start with part 51 and continue on till part 55. Attach the whiskers, parts 56 and 57 onto part 53. Once done, you can cut out the excess textures and give the Moogle some whiskers. Attach the assembled face onto the head. It's that easy. (middle picture)

Follow this up, by attaching parts 58, 69 and 70 (right picture) Notice that gap between 69+70? That's where you attach the ears.

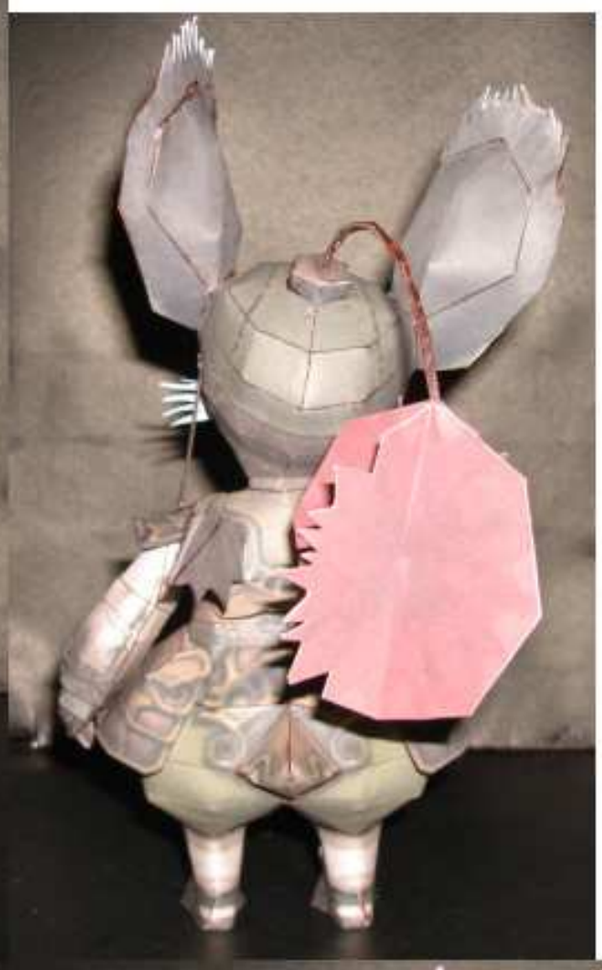


Start off with parts 59-61. Part 60 has a double tab that goes onto the marked tab on 59. The other tabs on part 60 are glued onto part 59 as well. Part 61 is just glued around part 59. You have the basic ear shape now. Follow this up by assembling parts 62+63 and then just glue it onto the back of the ear. You'll end up with 4 tabs remaining that should be glued onto the head.

Simply repeat the same process on the left ear, parts 64-68

Now that you attached the ears, time to complete the head. Just attach parts 71-72. To close this portion of the build, it's best to finish up on the accessories first, since attaching the stalk + pom-poms would be a hassle to have around while holding the model and attaching the other bits and pieces at the same time.

Attach the tassels to the head, the shoulder armor, and the waist armor as well. So now onto the stalk and pom-poms, it's easy and a bit fiddly at the same time. What you can do is use some type of wire, it must be hard and still bendable to a certain degree so it'll be easy to curve the way you want. Once you have that wire, simply super glue it onto part 73 by making a small hole on the top bit, and gluing it from the inside. When you're done with that, attach part 73 onto the head and just close the whole thing up with a piece of wire super glued to it. You now have the stalk ready for the pom-poms. However, if you don't have access to a wire to use, simply cut out at least 2-4 thin strips, glue it back to back and then attach to part 73. The pom-poms itself isn't too hard either, just glue 2 pieces back to back, cut a straight line from one edge, till the middle of it. Do the same on the other set, however this time, leave a single edge not glued; this is where you glue the stalk into, cut a straight line from 1 edge to the middle once more. Once done insert both sides together via the straight cut you made, and then using the single edge that wasn't glued, insert the stalk into this edge, and then finally glue it up. You'll end up with something like this:



Well, that's just about does it… as usual; this is for reference purposes only, not an actual instruction. How you build your model is completely and entirely up to you. The end result will solely depend on your skills and judgment, at least you get to see how I built my model, and how the final product looks like once completed.

Anyway, good luck to you. By the way…. I'm calling this little Moogle, Momo…. Yeah, I suck when it comes to names. I like it though.
