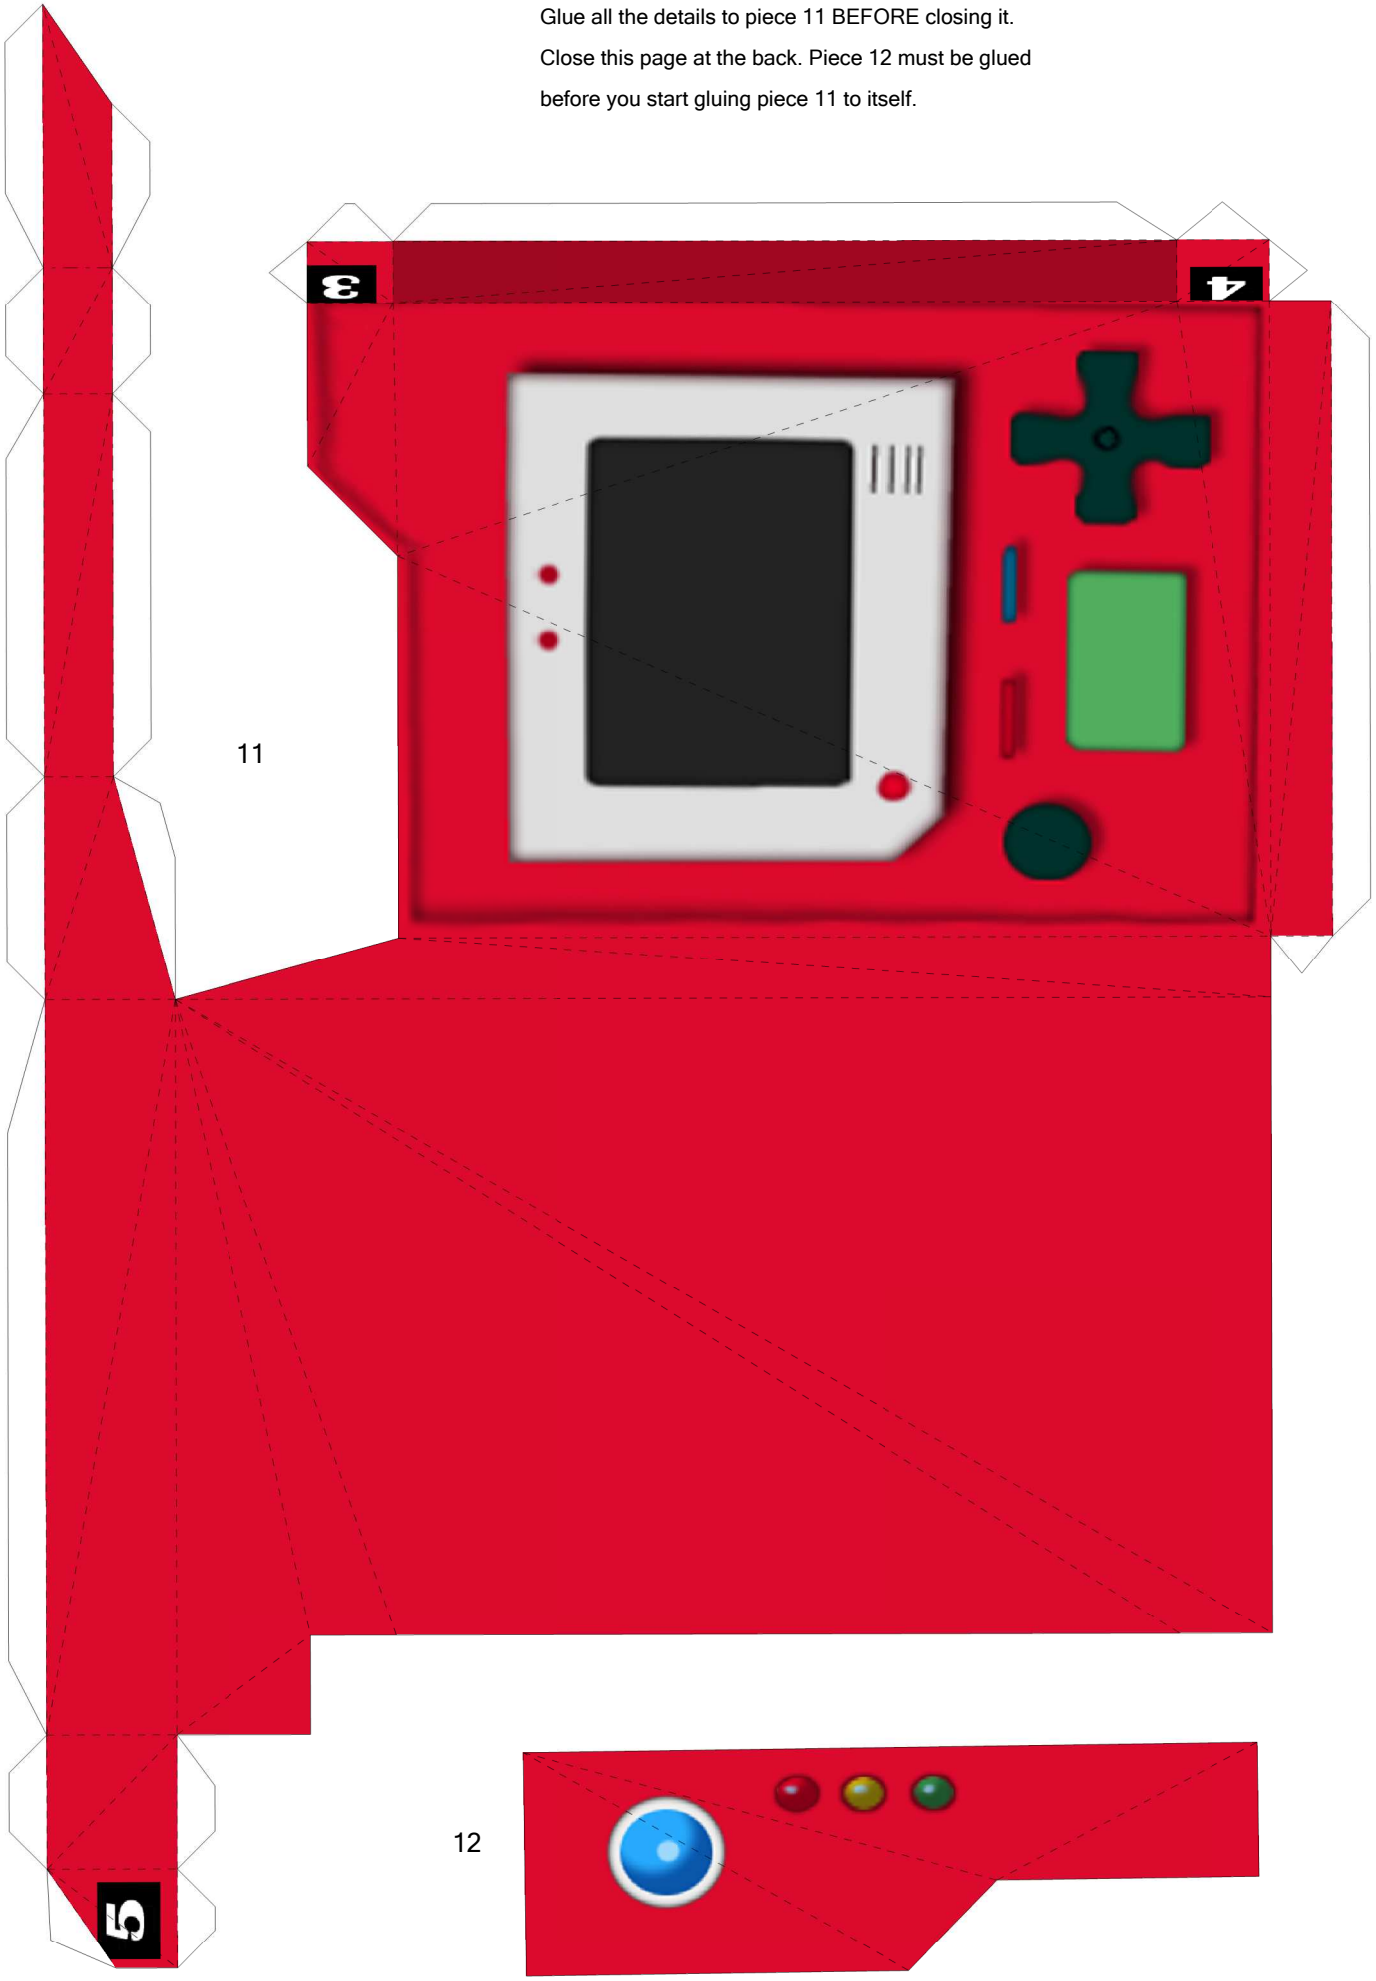
Glue all the details to piece 11 BEFORE closing it.

Close this page at the back. Piece 12 must be glued before you start gluing piece 11 to itself.



Close this page at the inside, on the tabless part.

You can either use one of them or cut two slits on the sides of the blank one and cut the entries, leaving wings and just slot them on top of the blank one.

First build the middle tube. The inside of the main tube MUST be built BEFORE the outside. After the inside is built, glue it to the top and bottom of the outside and glue the bigger part, one tab of the top and one of the bottom at a time. Glue the main tube to piece 13 before doing anything with it. After the other page is built, glue piece 4 to piece 11, making sure to follow the reference. Place the middle tube inside the main tube and glue the middle to piece 4, following the reference. Be careful not to glue the main tube. After that, glue piece 5 to piece 11, starting by the reference with the number 4, only after that glue the middle tube to it. If done correctly, it should rotate well.
