

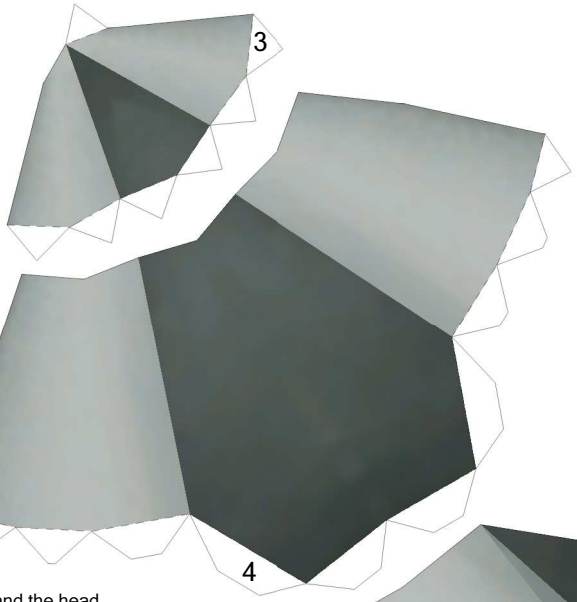
Excadrill

By Brandon

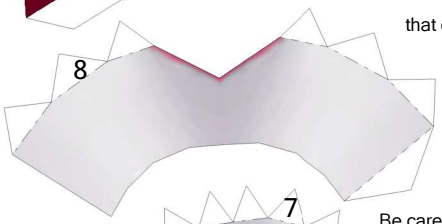
Build by LuIS

PaPerPoKéS
www.pokemonpapercraft.com

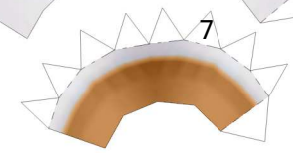
This is a pretty straigh-forward model, if you pass the join of the head to the top drill and the open hand you'll be fine. The rest of the model is pretty easy, just follow the instructions and you'll be fine.



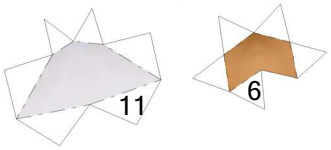
Make sure to fold the tabs of piece 11 and start gluing it by the big ones that connect to 10.

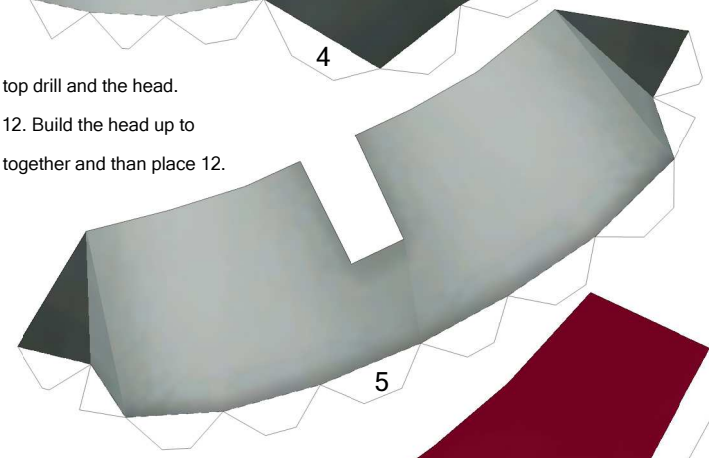


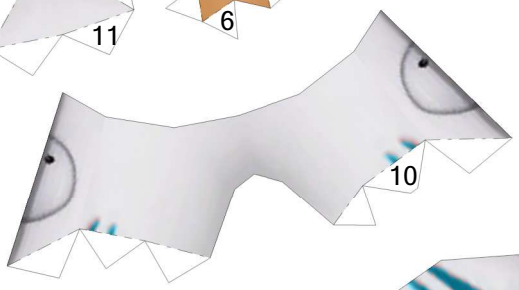
Head

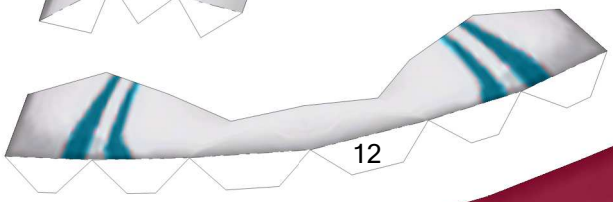


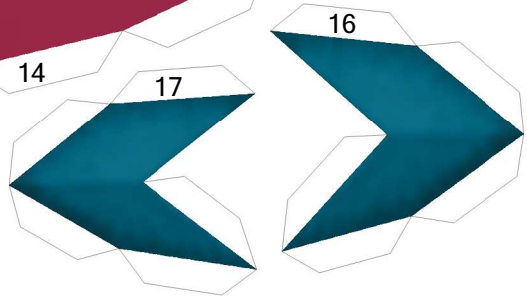
Be carefull when joining the top drill and the head. Do it before attaching piece 12. Build the head up to piece 11, join both the parts together and than place 12.

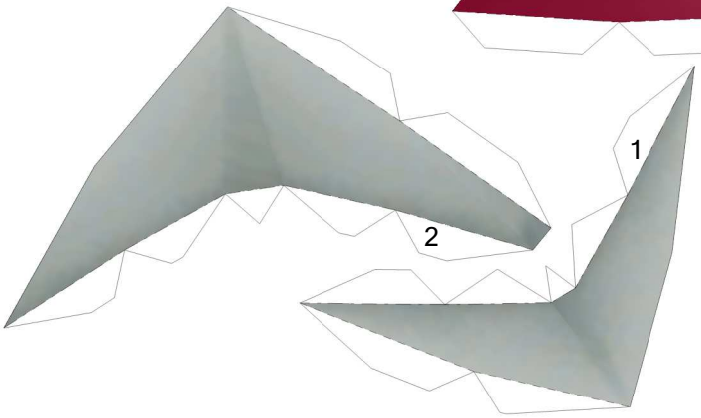






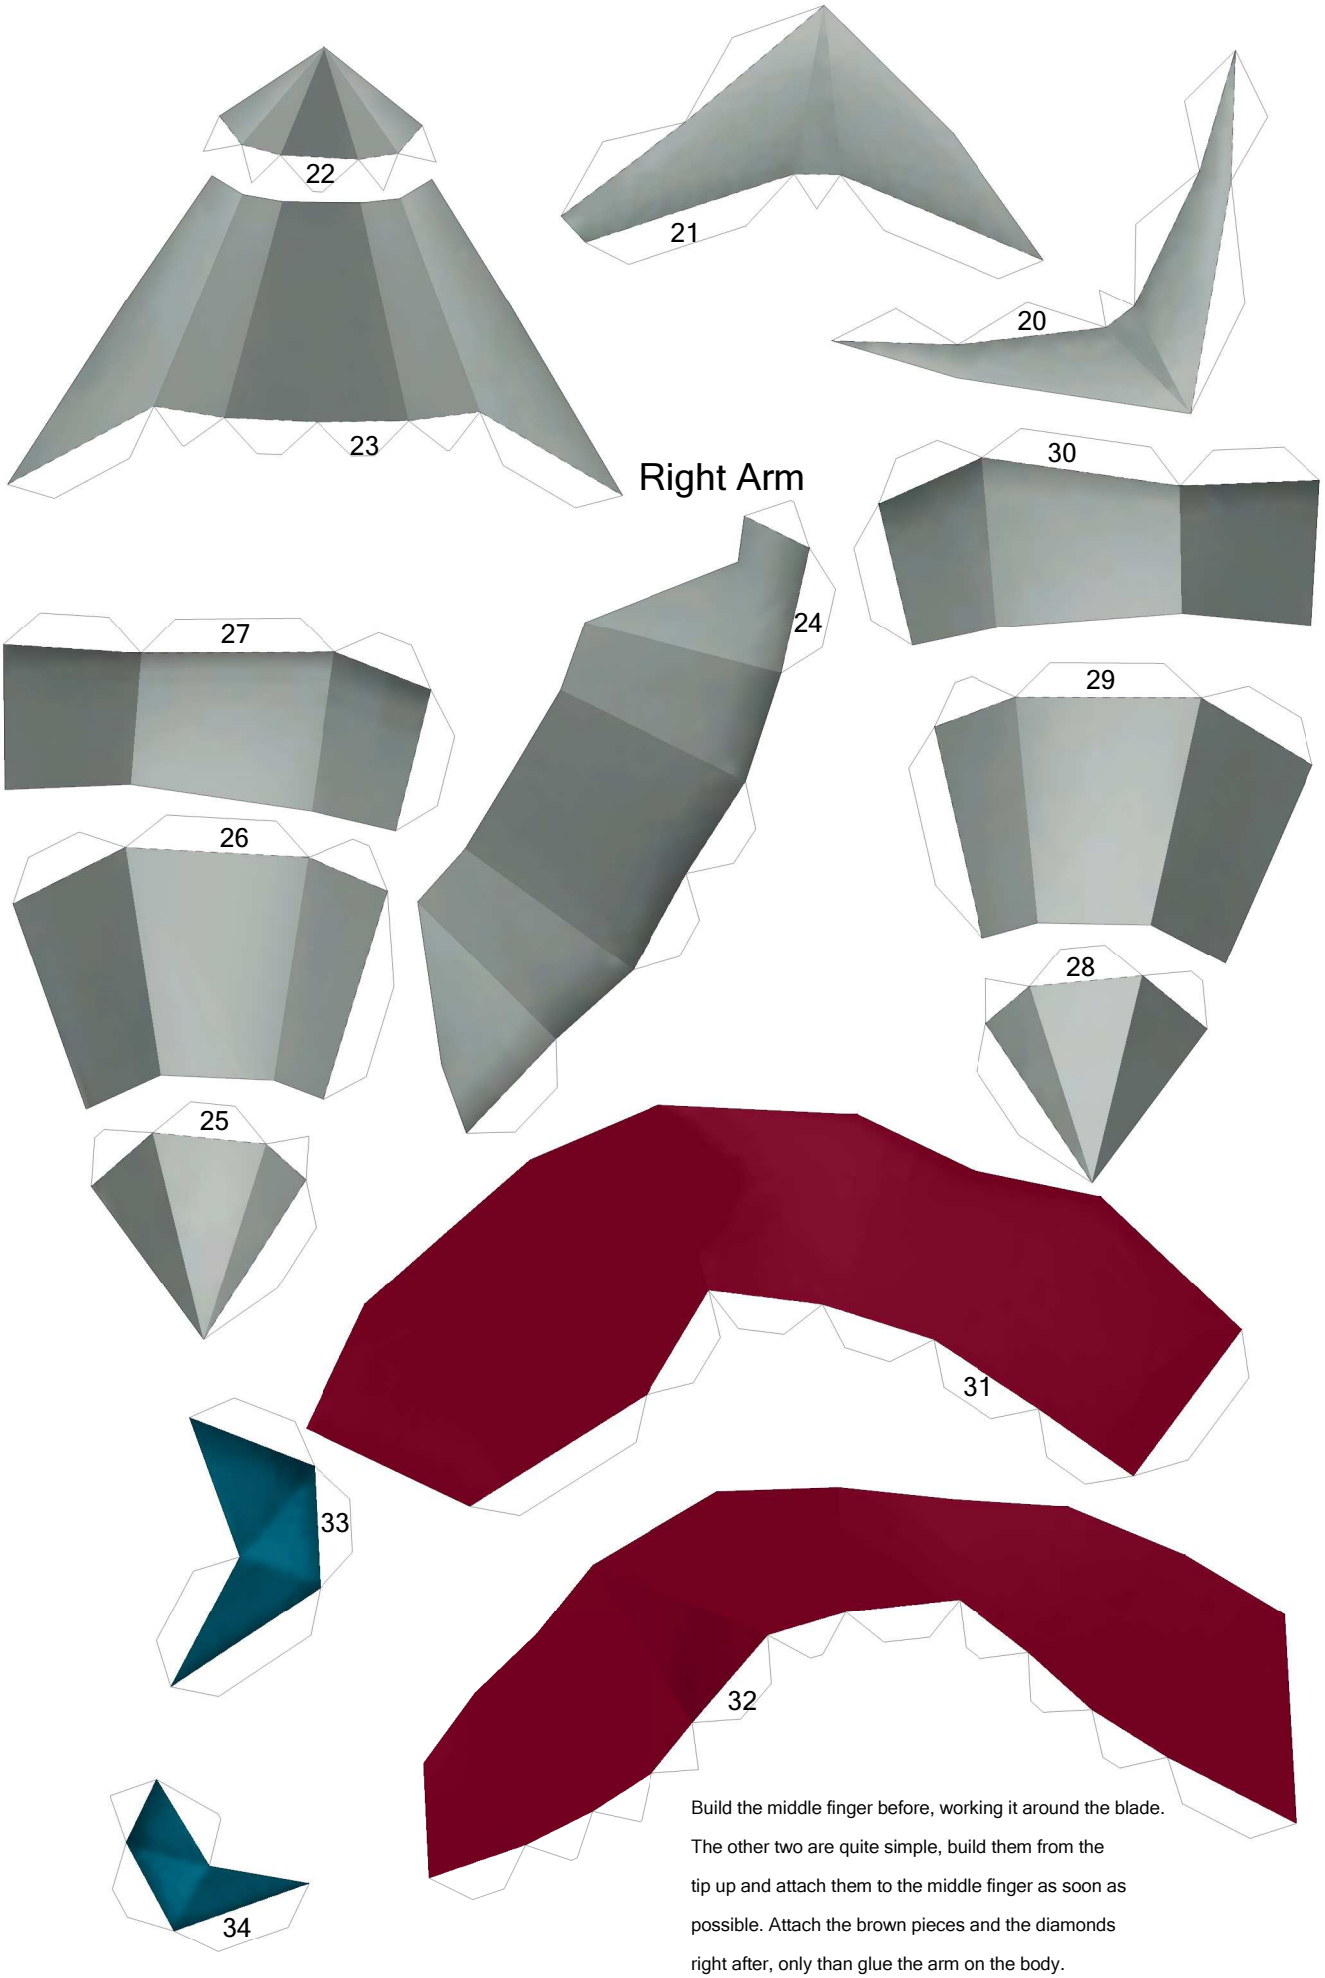






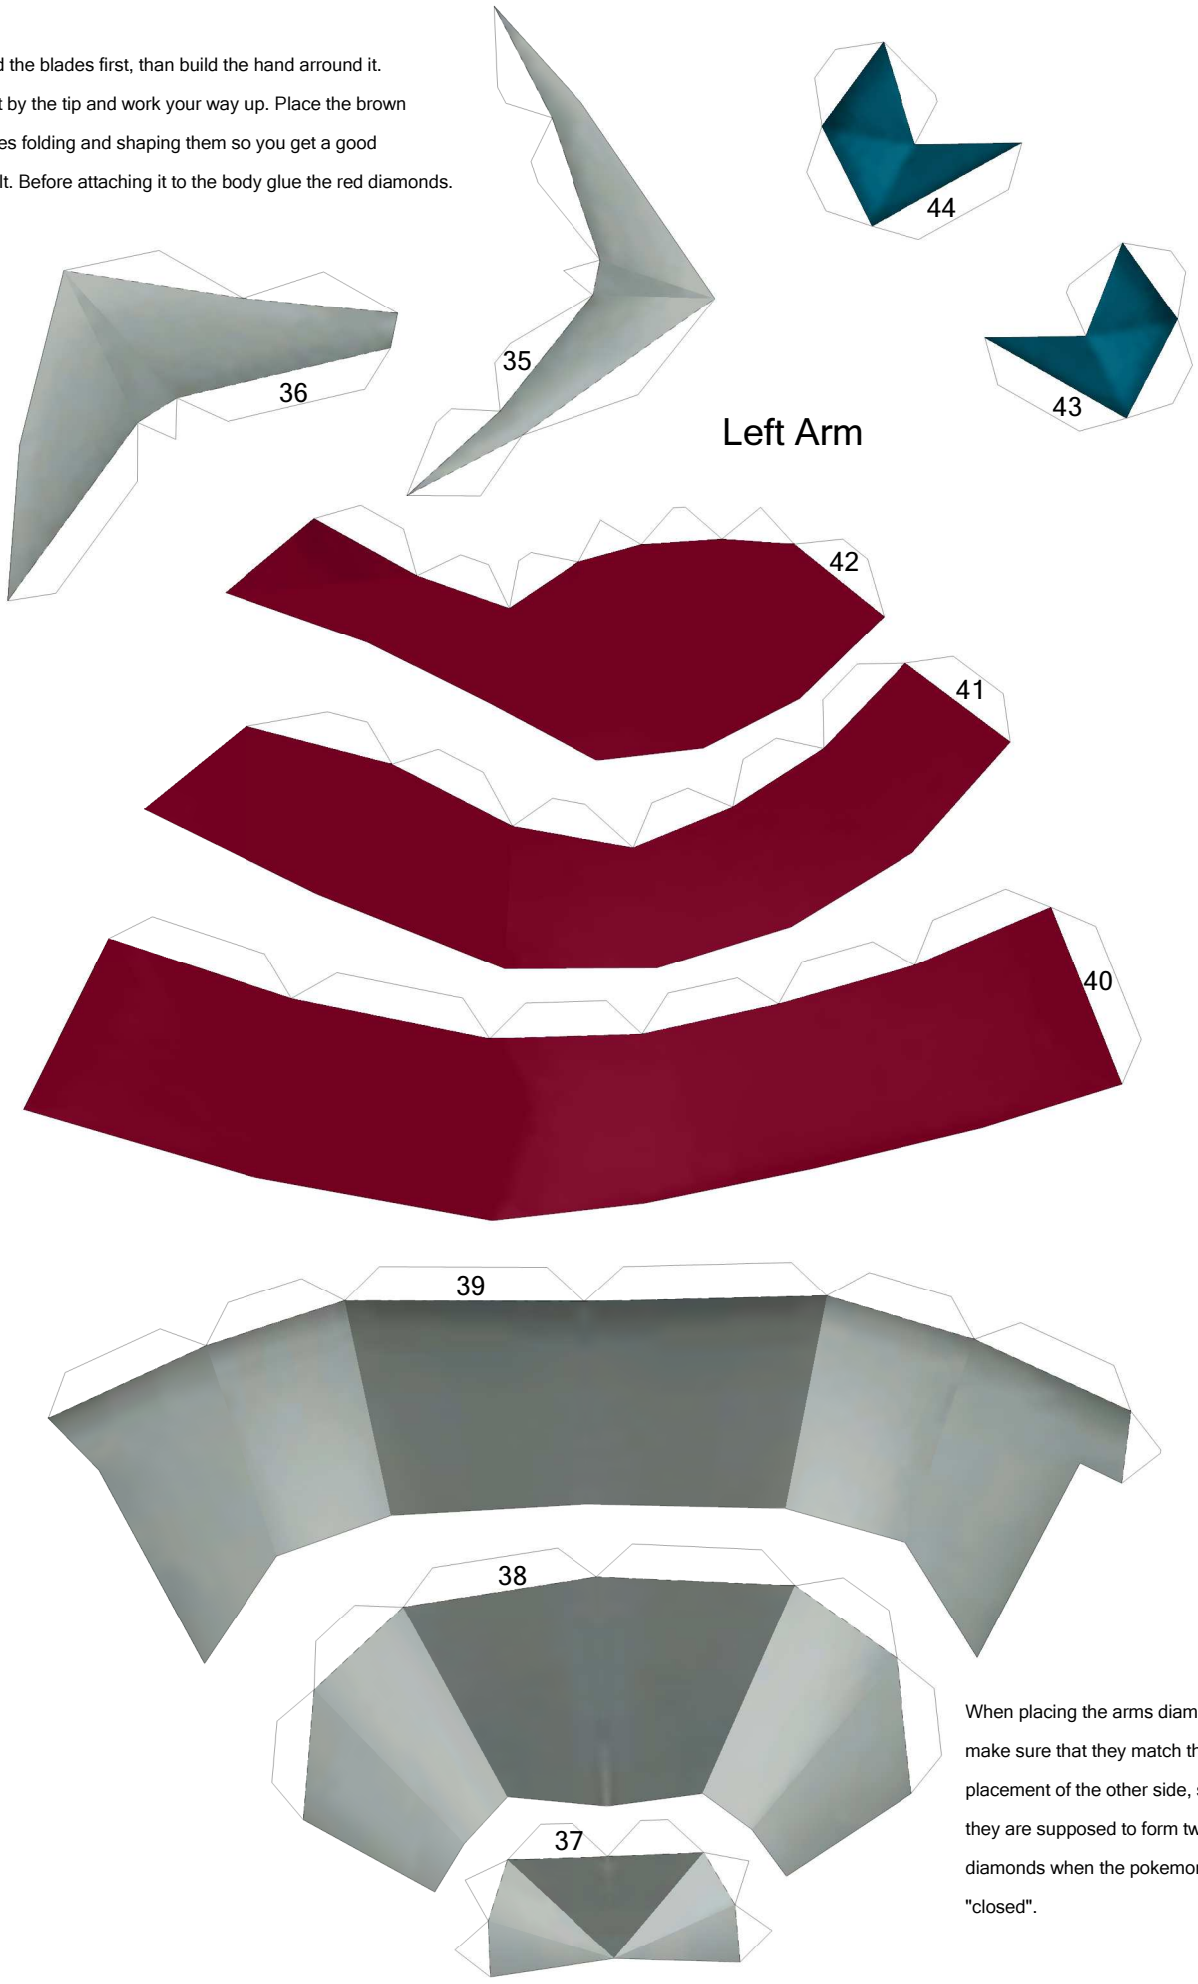
There are texture reference where the diamonds go. Follow them and you'll be fine. It's a good idea to follow the numbers when gluing, but, if you plan on gluing them after closing the model (I don't suggest it), you may need superglue.

Be carefull with piece 45 around the arms, it can get kinda hard to glue the tabs there. Nothing patience and a good glue don't solve.

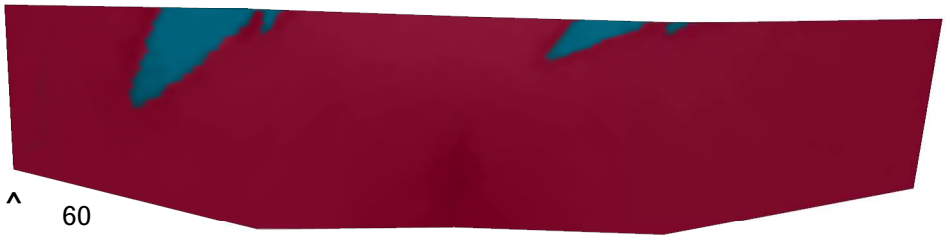


Build the middle finger before, working it around the blade. The other two are quite simple, build them from the tip up and attach them to the middle finger as soon as possible. Attach the brown pieces and the diamonds right after, only than glue the arm on the body.

Build the blades first, than build the hand arround it. Start by the tip and work your way up. Place the brown pieces folding and shaping them so you get a good result. Before attaching it to the body glue the red diamonds.



When placing the arms diamonds, make sure that they match the placement of the other side, since they are supposed to form two big diamonds when the pokemon is "closed".



^ 60

Close here

Close the model at the indicate place. Before gluing the last tab, glue piece 61 and place some weight inside it, since it's kinda unstable, deppending on the paper you're using you will need a different weight, I needed two coins and it's still kinda unstable.

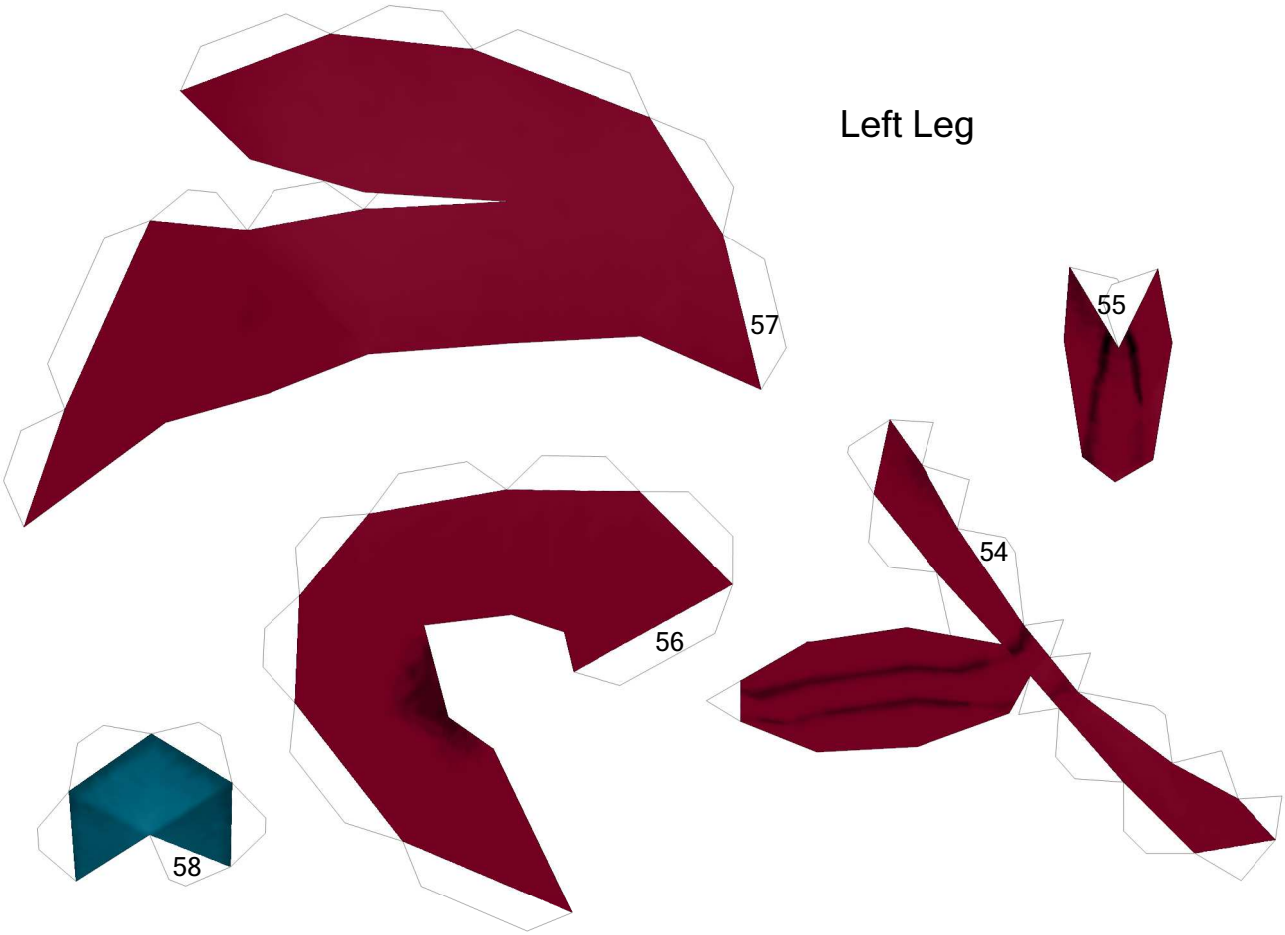
Right Leg

Build the legs from the feet up. Start piece 50 and 55 by the front of the feet and work one tab at each side untill it's totally glued.Glue the red diamonds before attaching the legs.

If you're building the lineless, I colored the tabs I think must be folded. They are the red lines on the reference pdf.



Left Leg
