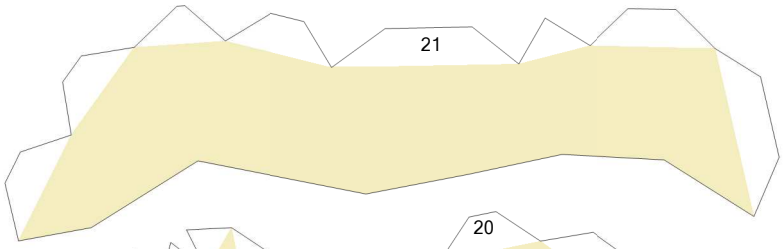
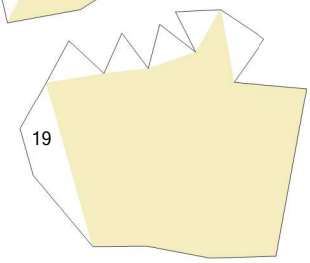
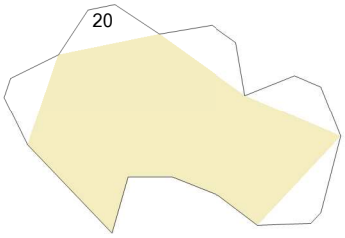
Left front leg flame

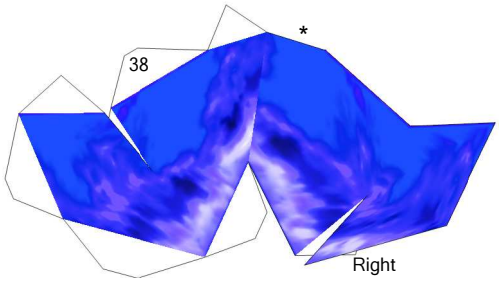




Left

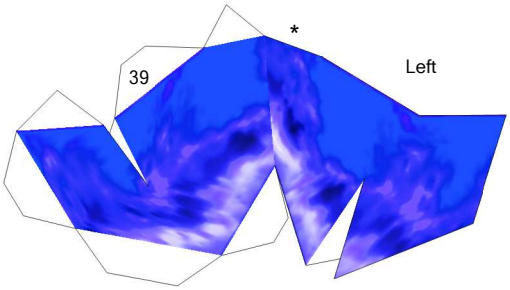


Close the back leg flames on the places with the *

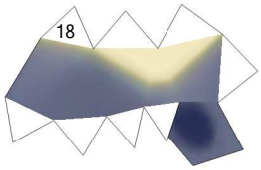


Right

Back Leg Flames

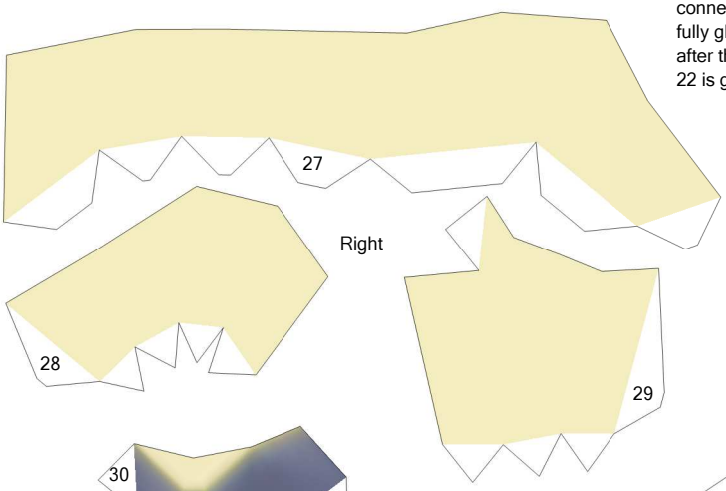


Left



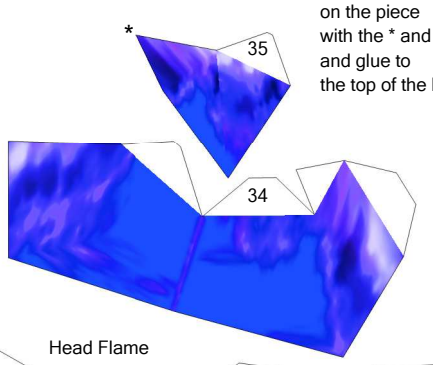
Rear Legs

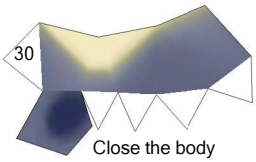
When glueing the fire of the rear legs and the back, it's suggesting using superglue. Place the glue on the part that connects to the body and wait untill it's fully glued. The rear flames must be placed after the body is closed and the back after piece 22 is glued, so you can apply presure from inside.



Right

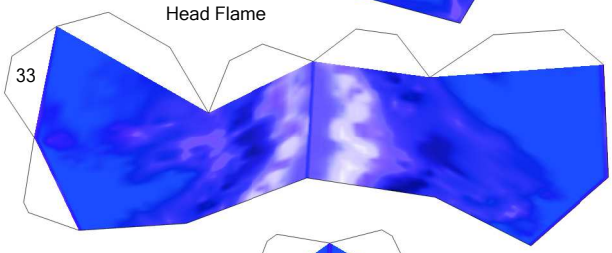
Place glue on the piece with the * and and glue to the top of the head.

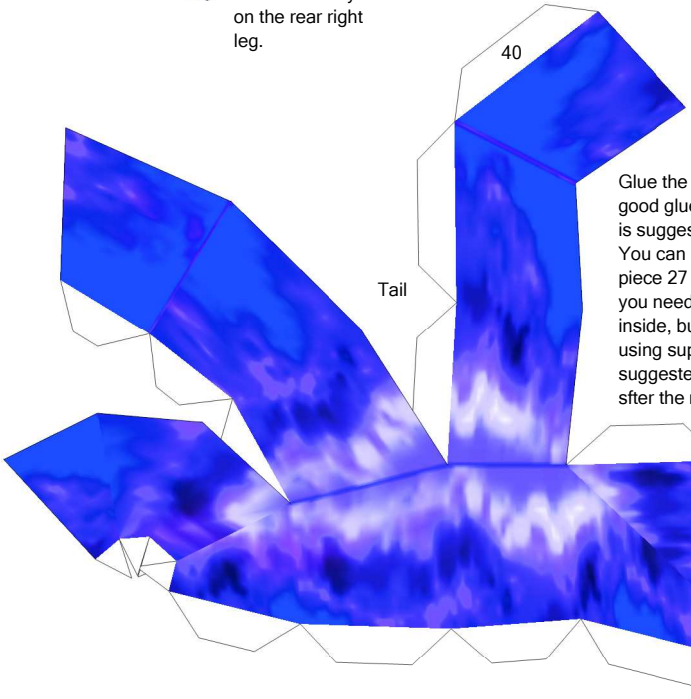




Close the body on the rear right leg.

Head Flame





Glue the tail using good glue, superglue is suggested here. You can attach after piece 27 is placed if you need presure from inside, but if you're using superglue, it's suggested to glue only sfter the model is closed.
