

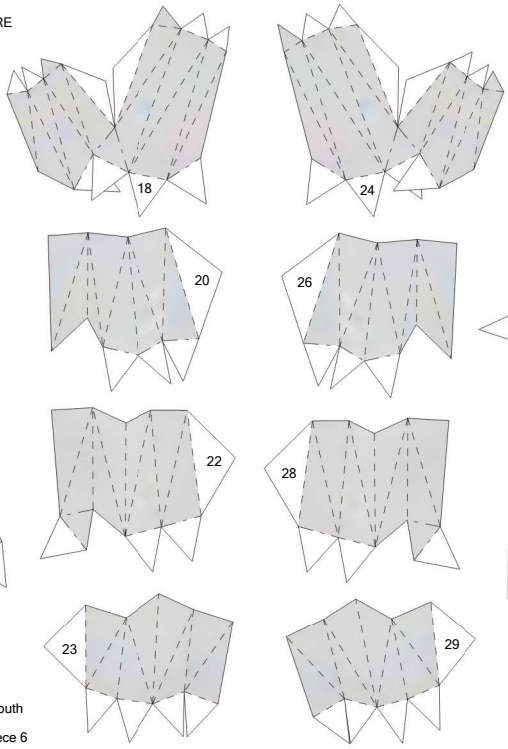
Sawsbuck W

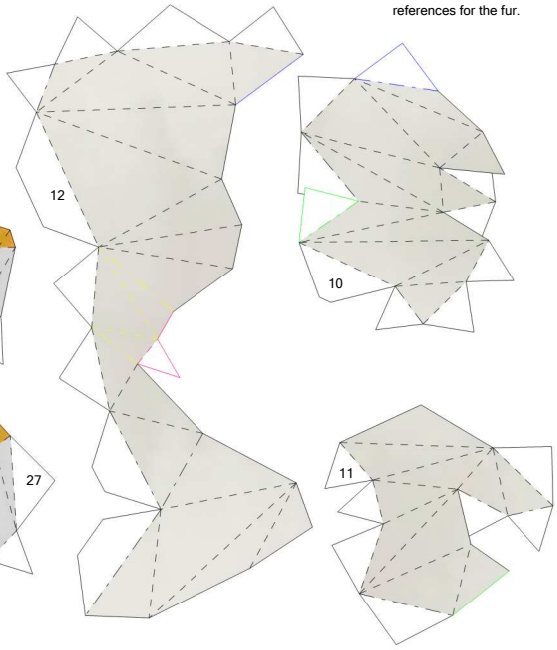
Build by LuIS

PaperPokés
www.pokemonpapercraft.net

Join piece 19 to 20, 21 to 22, 25 to 26 and 27 to 28 BEFORE gluing them to pieces 18, 20, 24 and 26.

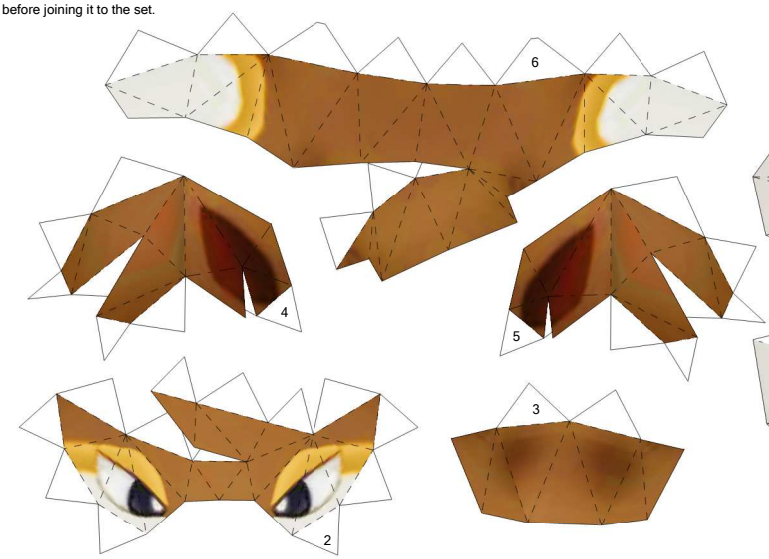


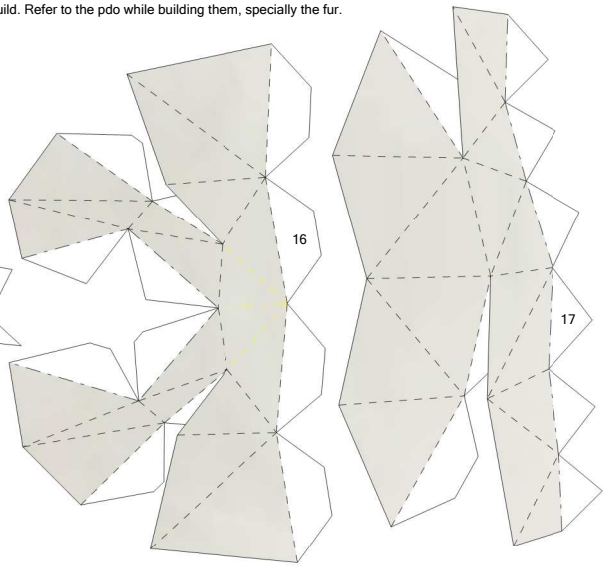
Follow the colored references for the fur.



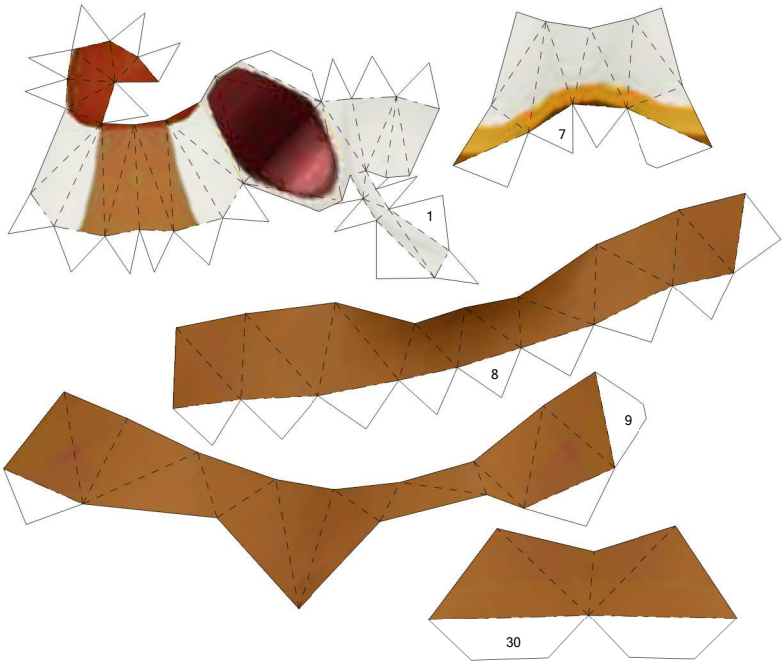
Glue the antlers when the numbers get to them, this beeing after the fur is placed. These two parts (antlers and fur) are the hardest parts to build. Refer to the pdo while building them, specially the fur.

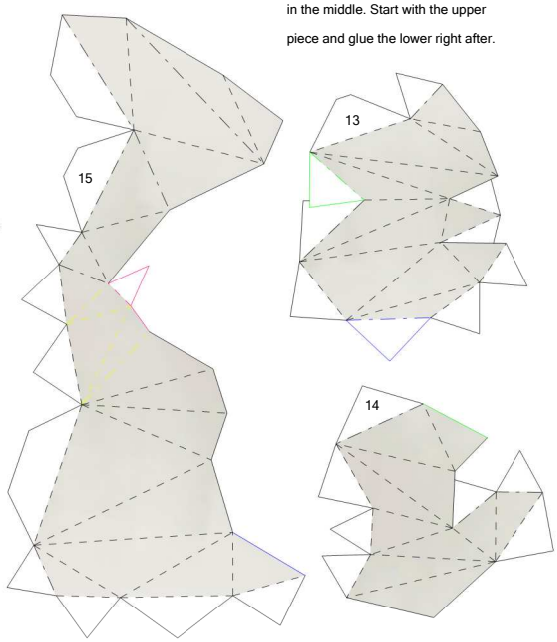
Start at the nose, build the mouth around it. Glue the ears to piece 6 before joining it to the set.

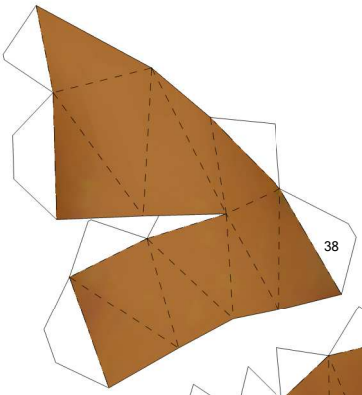


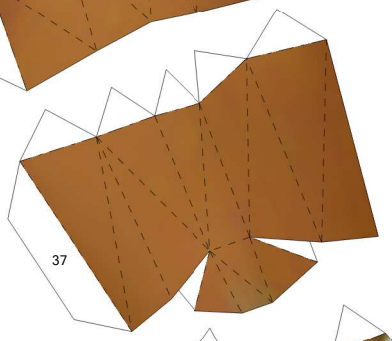


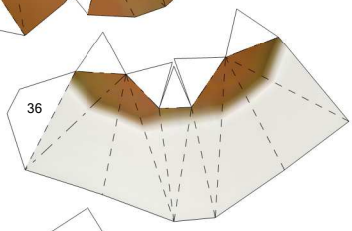
Join both of the sides of the fur in the middle. Start with the upper piece and glue the lower right after.

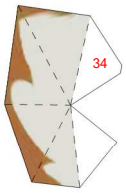


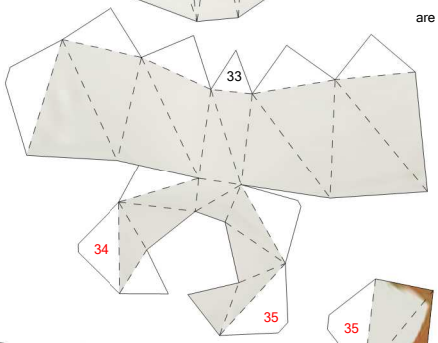


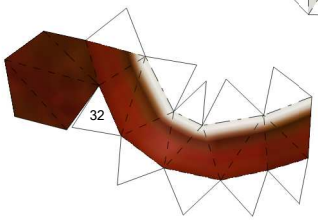


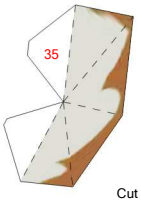


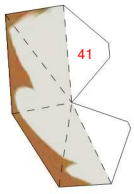






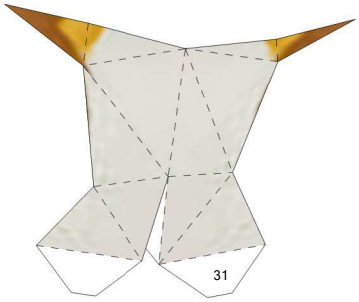






Glue piece 31

BEFORE gluing the legs.



Use the red numbers as references

for gluing the cufs to the legs. Glue

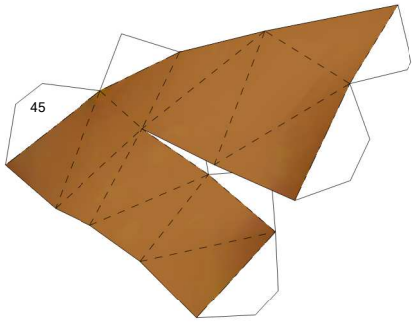
them to the tabs AFTER the hoofs

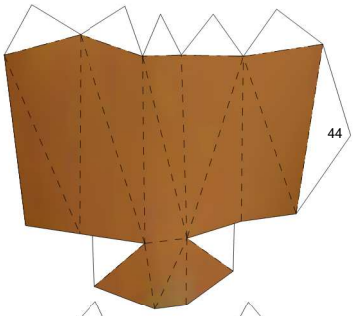
are glued to the first piece of the legs.

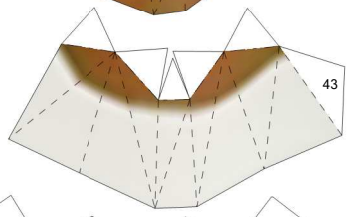
Cut the brown part of

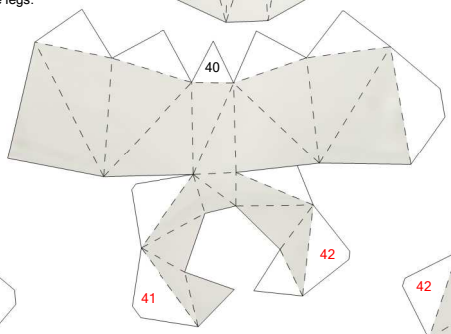
the cufs BEFORE

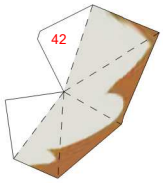
gluing them.

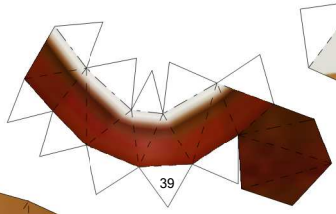


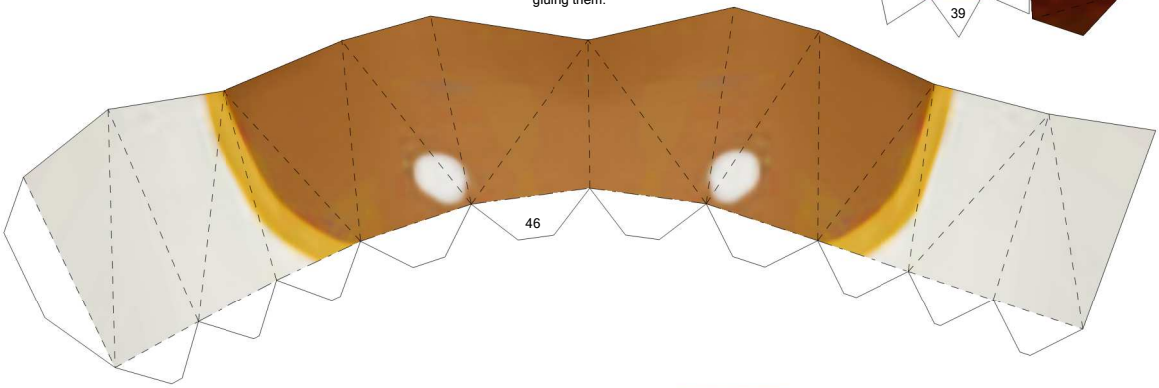


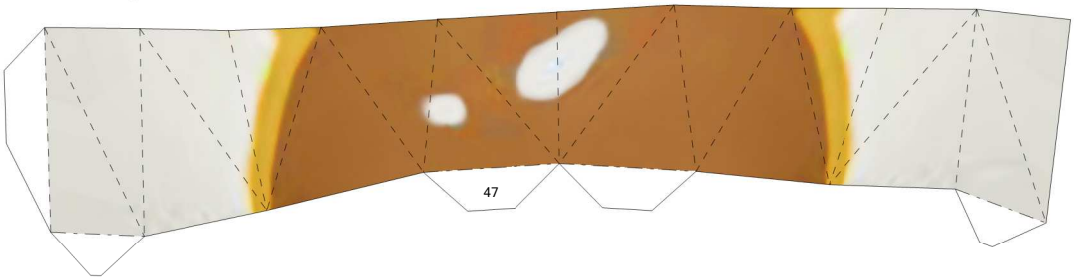


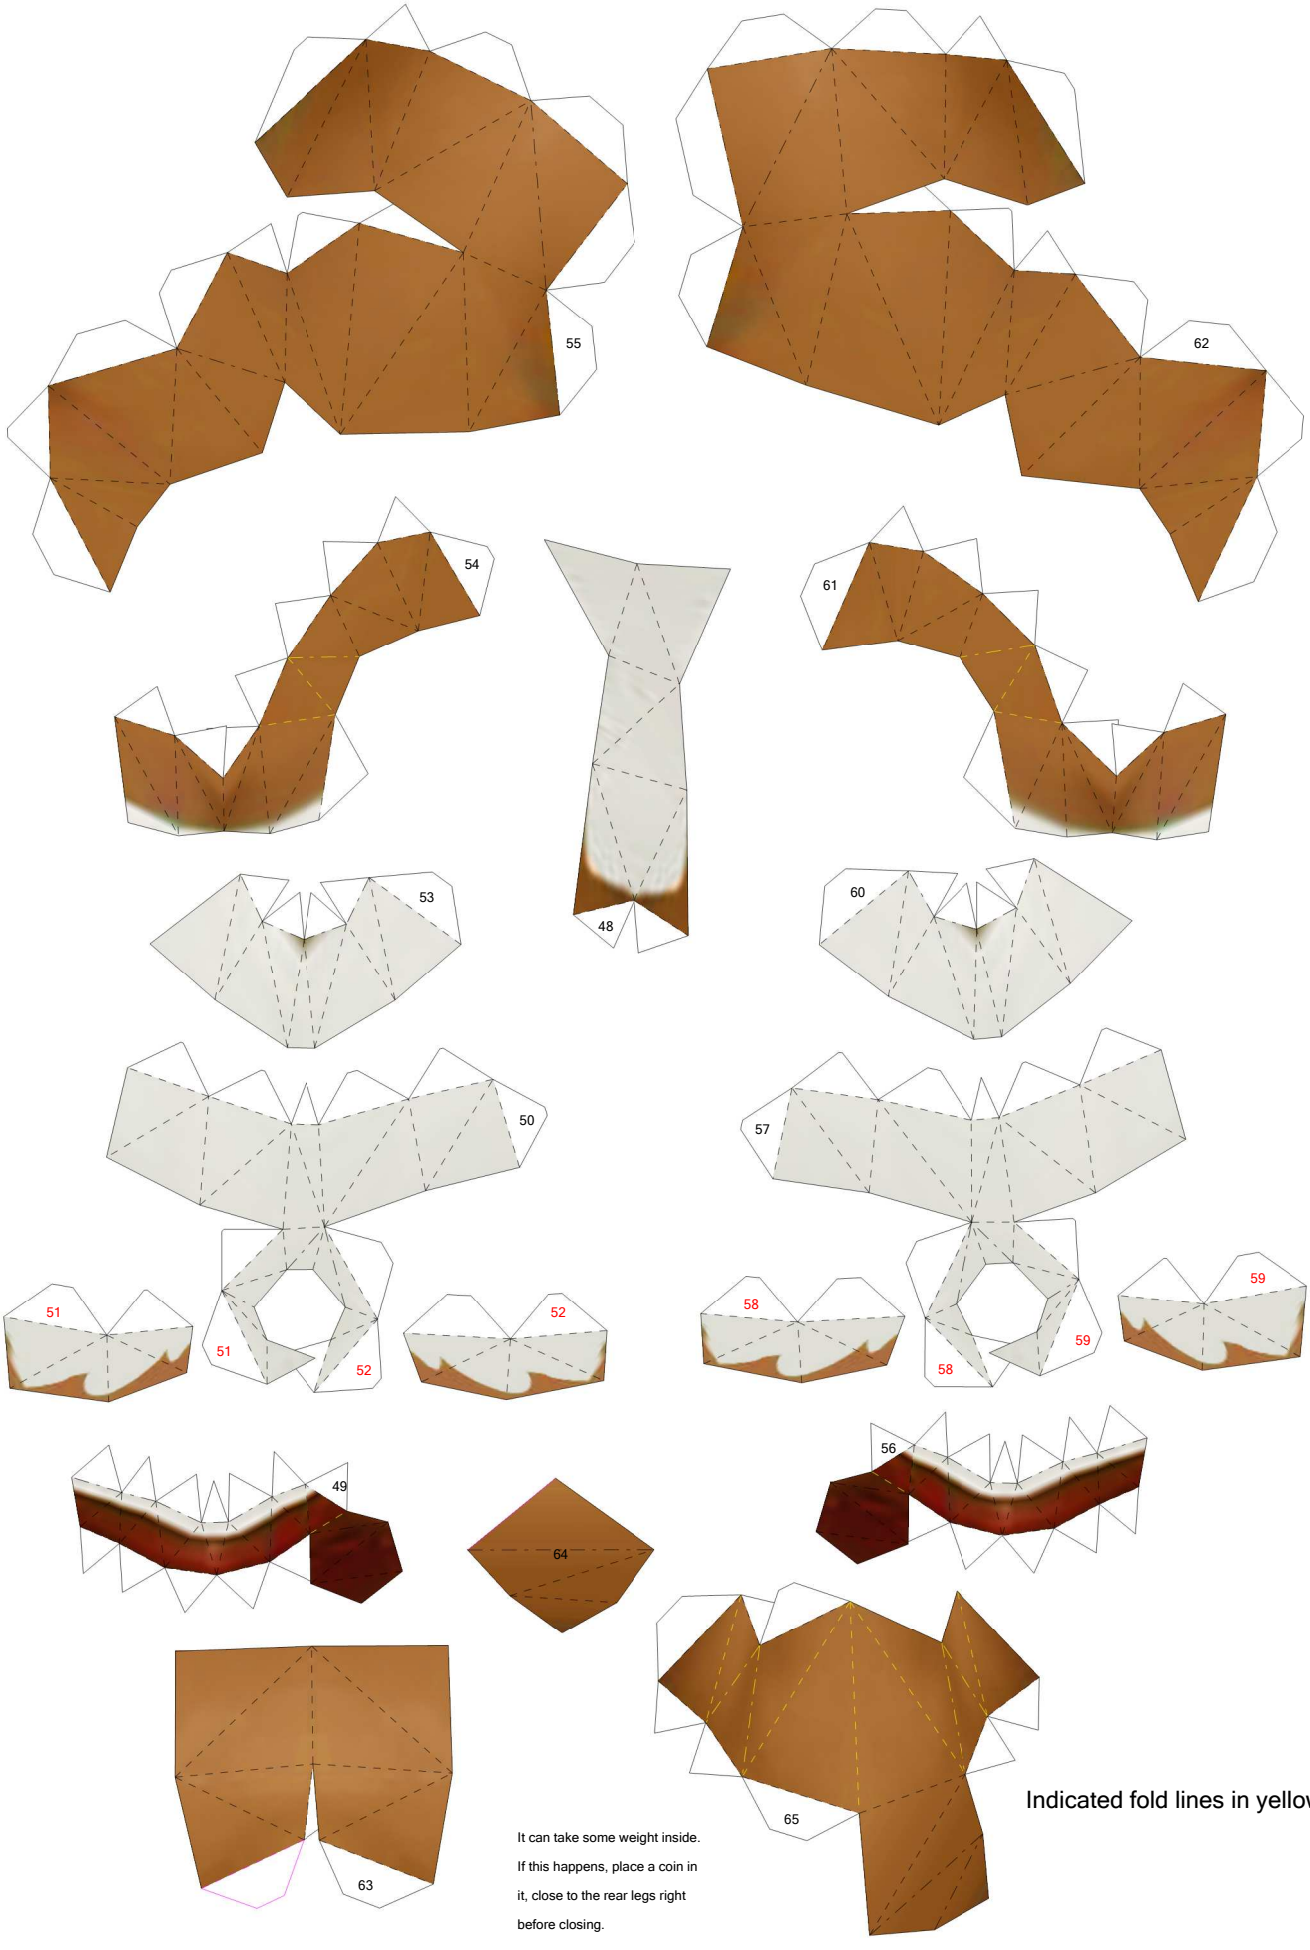












It can take some weight inside. If this happens, place a coin in it, close to the rear legs right before closing.

Indicated fold lines in yellow

Close at piece 64 and glue the tail to it after.
