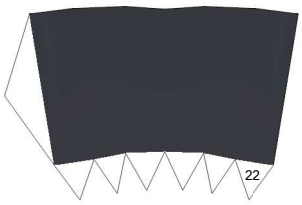
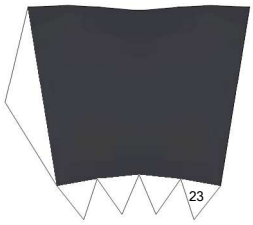
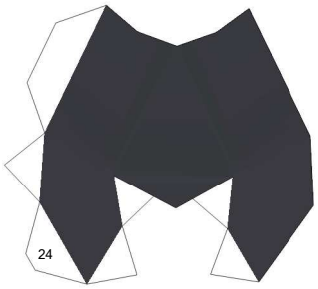
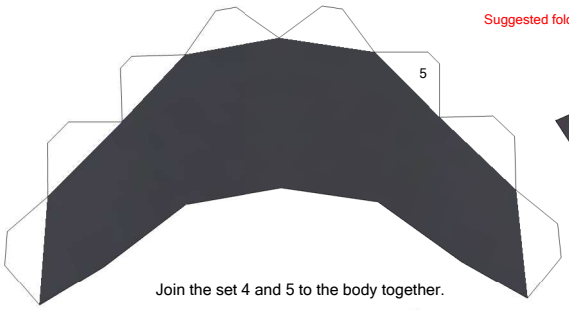
Suggested fold lines in red

TAIL

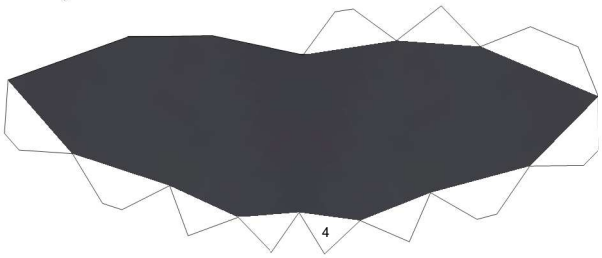


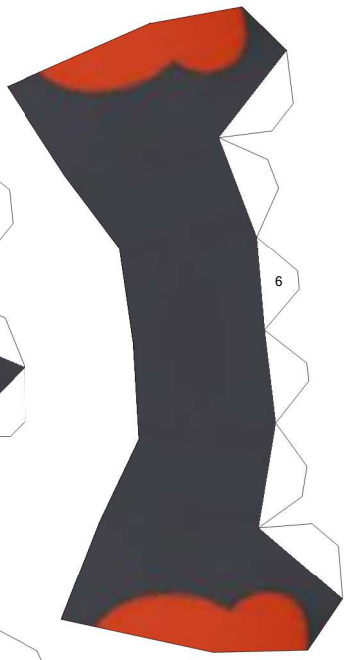






Join the set 4 and 5 to the body together.



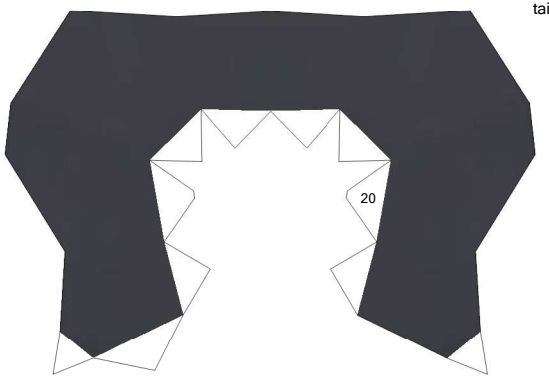


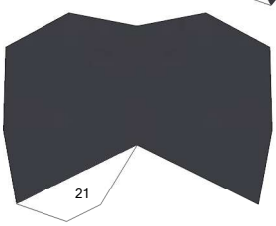
HEAD

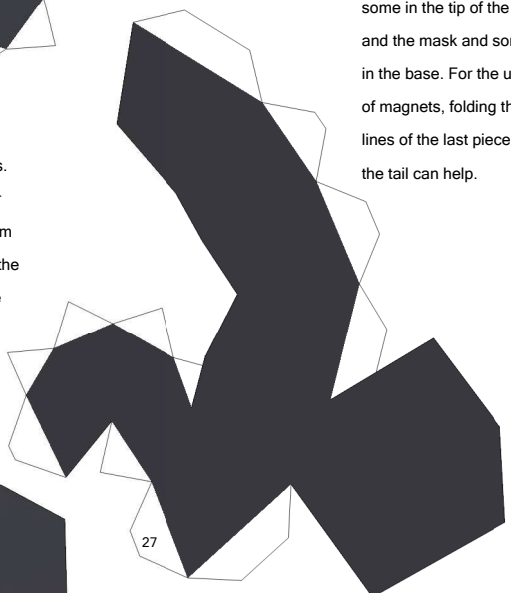
The connection between the body and the first piece of the tail can be tricky, take your time there.

Close the base at the bottom. You can either glue the model to it or use magnets to make it stand there. Just put some in the tip of the tail and the mask and some in the base. For the use of magnets, folding the lines of the last piece of the tail can help.

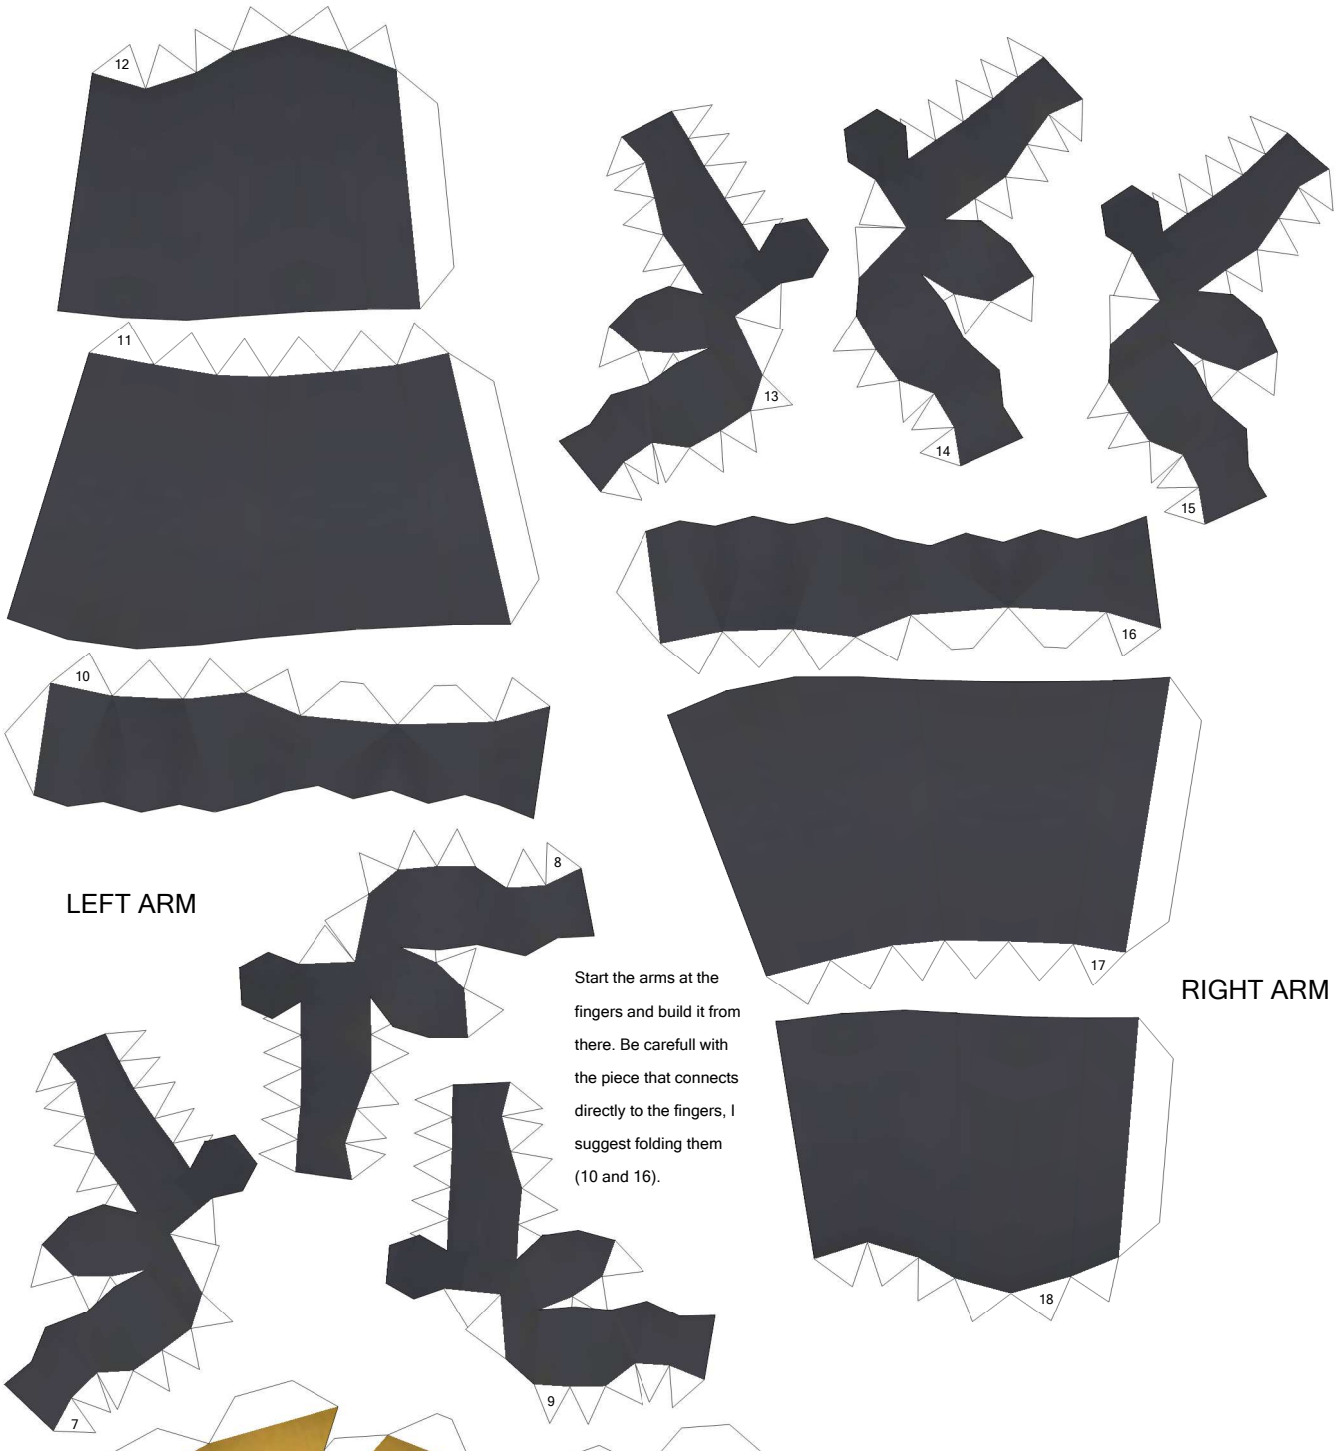
Start at the nose and follow the numbers. Stop at piece 6 and build the arms. After they are glued to the body, reinforce them from the connection between them and the body. Also, it's important to reinforce the tail connection and the inside of the tail.



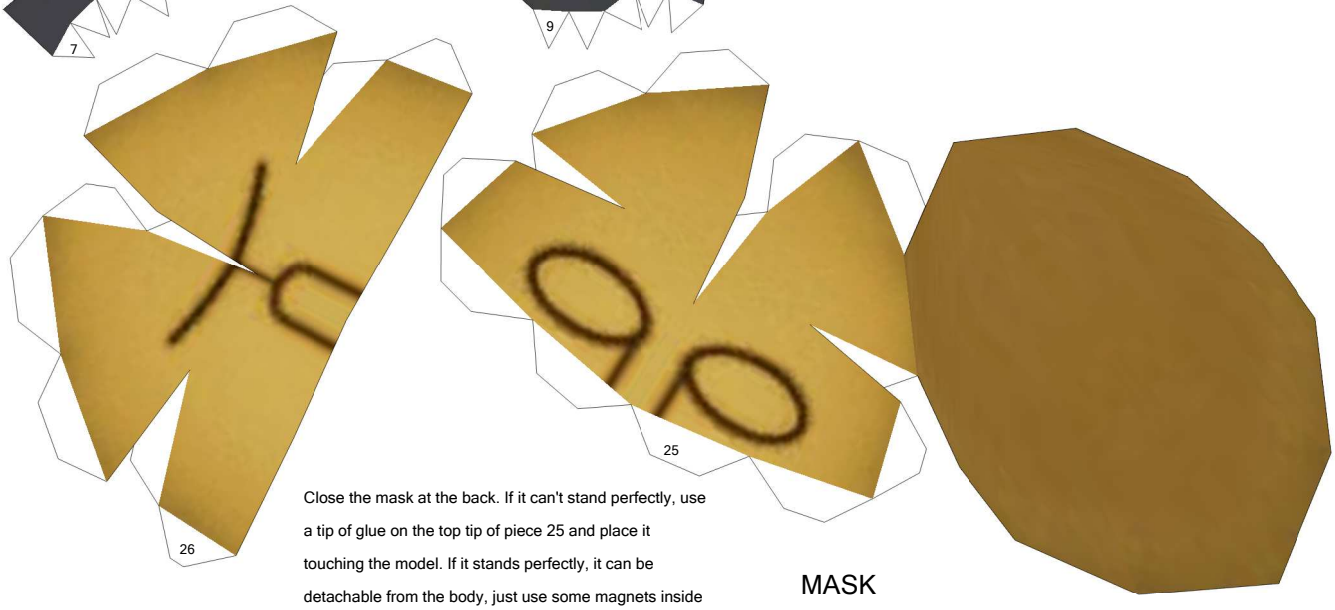




BASE



Start the arms at the fingers and build it from there. Be carefull with the piece that connects directly to the fingers, I suggest folding them (10 and 16).



Close the mask at the back. If it can't stand perfectly, use a tip of glue on the top tip of piece 25 and place it touching the model. If it stands perfectly, it can be detachable from the body, just use some magnets inside it and inside the tip of the tail.

MASK
