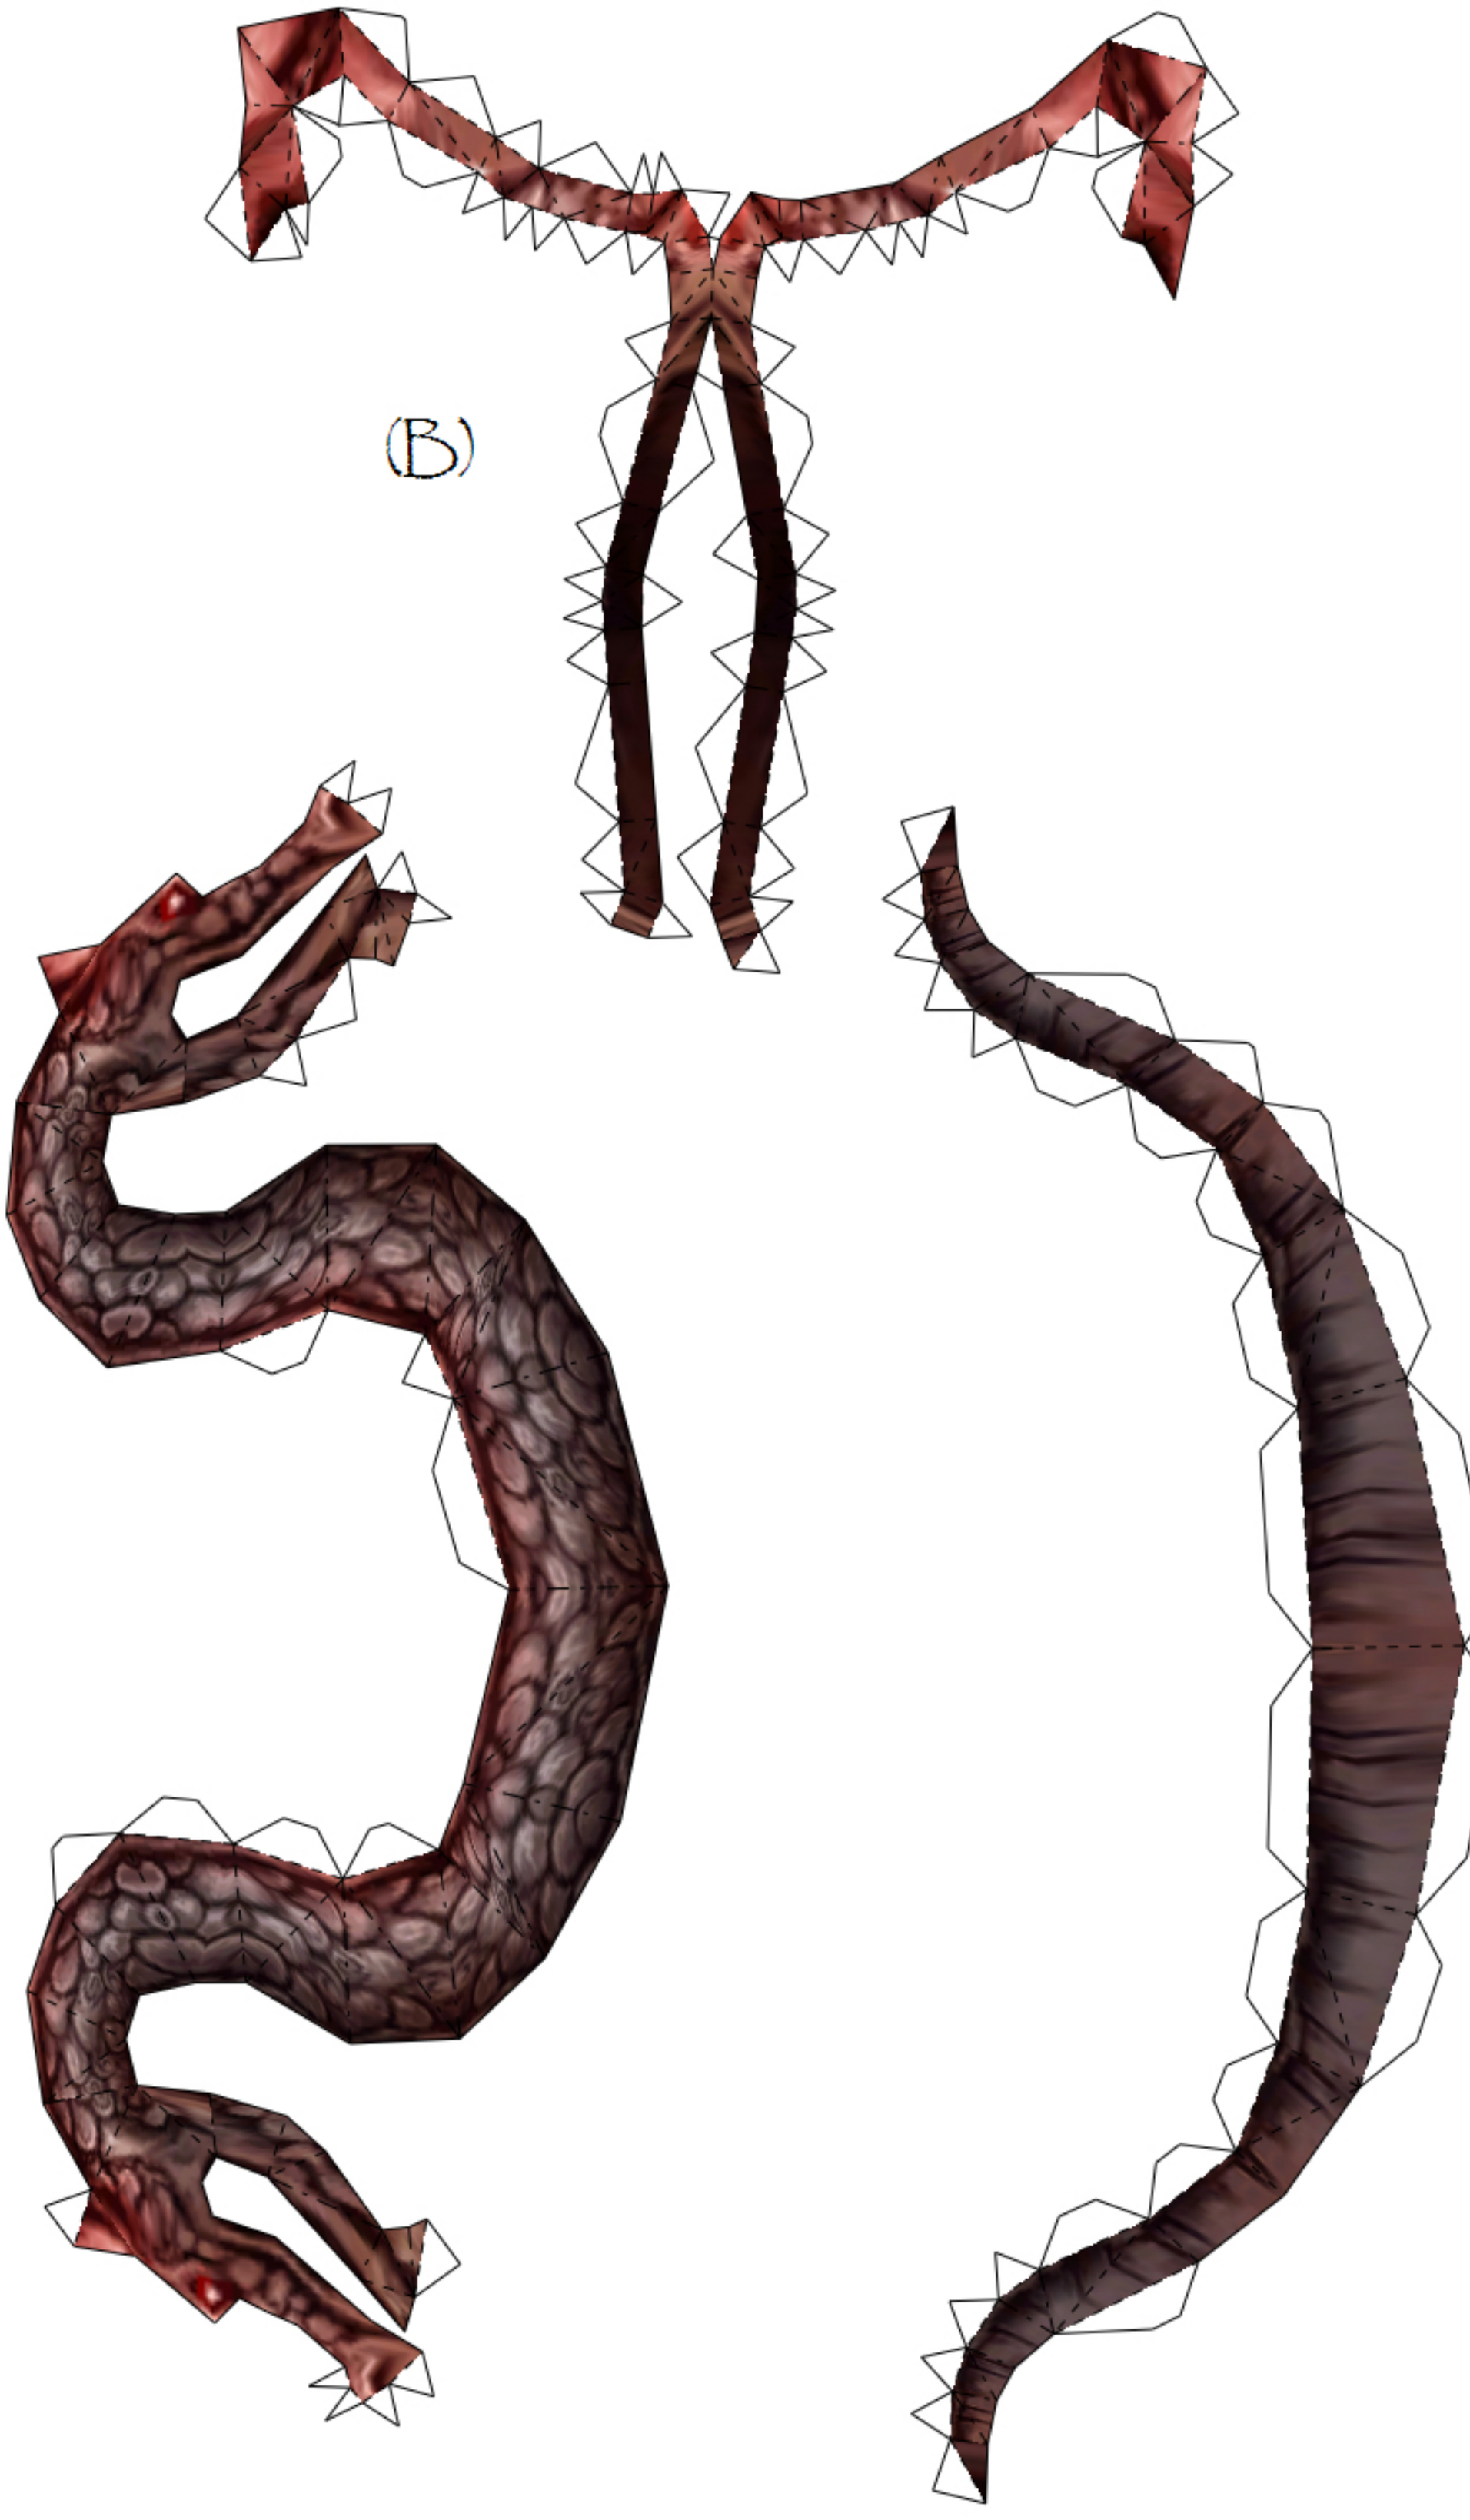
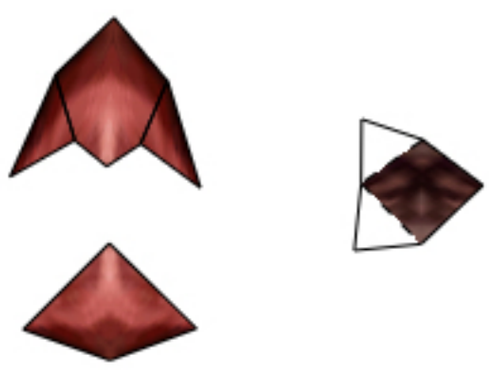
(A)



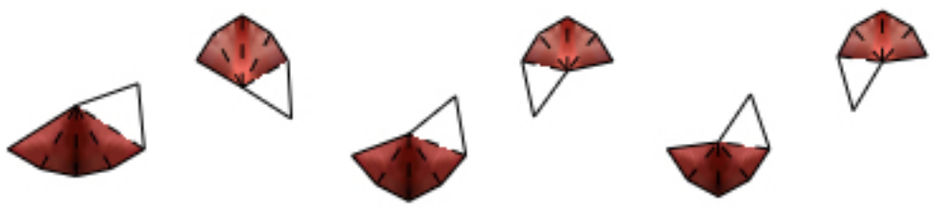
(B)

Upper head spikes (in order)

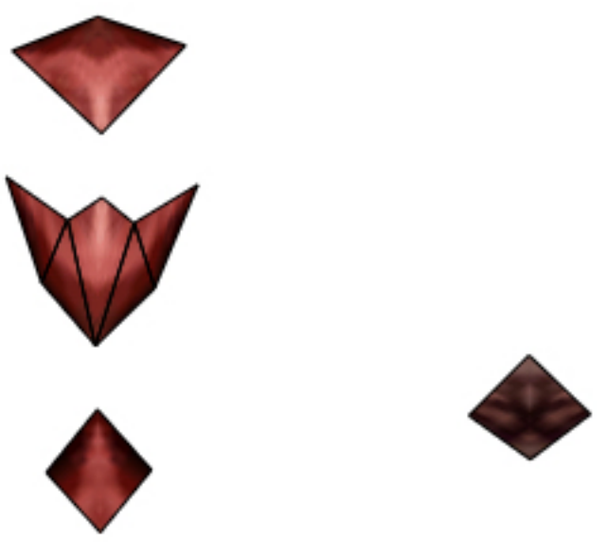


chin spike

Upper head teeth (in order)

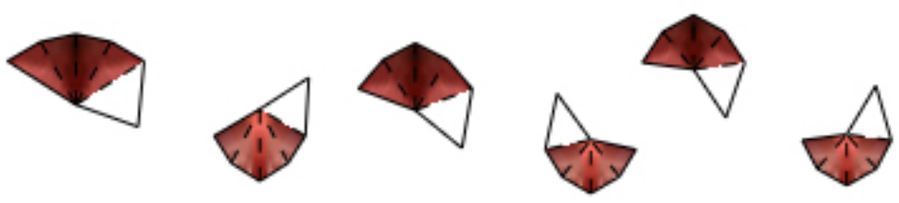


Lower head spikes (in order)



chin spike

Lower head teeth (in order)



BUILDING TIPS:

The blade has no connection with the handguard/hilt.
You'll have to tresspass a rigid wire or wooden stick through the blade and hilt to join the sword parts together.

The spikes on the heads must be glued by their bases - the folding line.

The eye in the center of the blade's top is also not connected.
Cut a hole in it to attach the blade before running a stick through it.

You better build pieces marked as (A) and (B)
BEFORE building the handguard (the dragon heads)...

Use thick paper (120 gr.)
