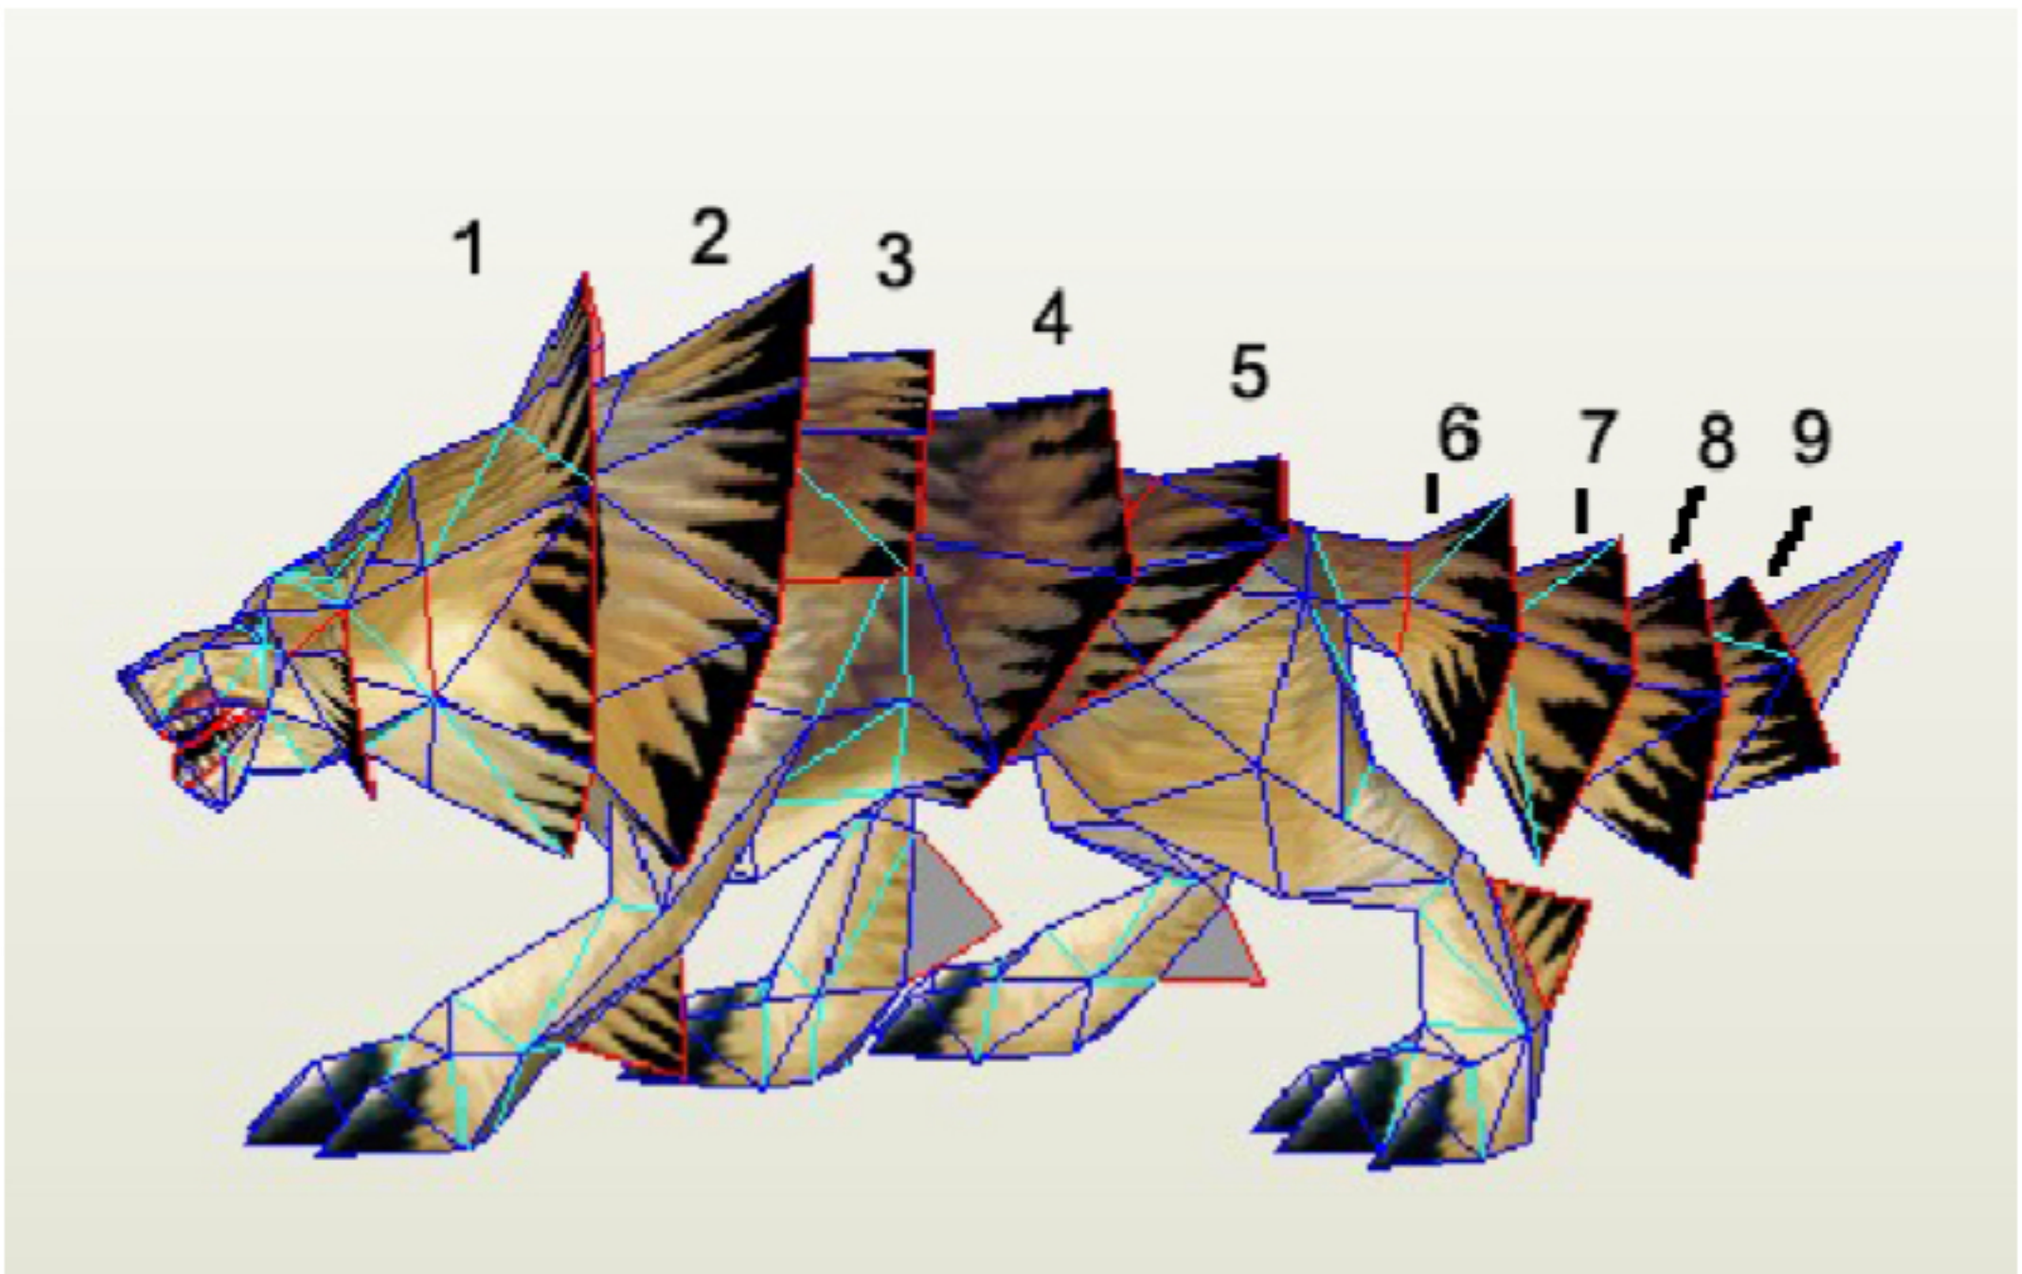
TIPS:

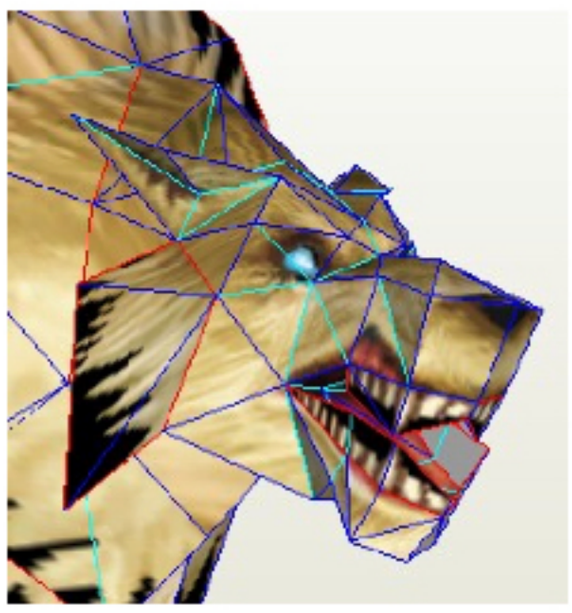
Follow the page sequence to build, except the neck (page 5)
that must be built just after the head.

The mane parts must be glued over the body according to its position on the 3D window. They are numbered as following:



The black (or white for the black skin) spaces must be cut out after the parts were glued. Same for the legs hair as you see above.

Teeth: Cut the black spaces out and glue them to the mouth, according to its position on the 3D window (example below).



Textures are named in the same manner as mats in the texture window:
0 is for the body and 1 is for the manes.
