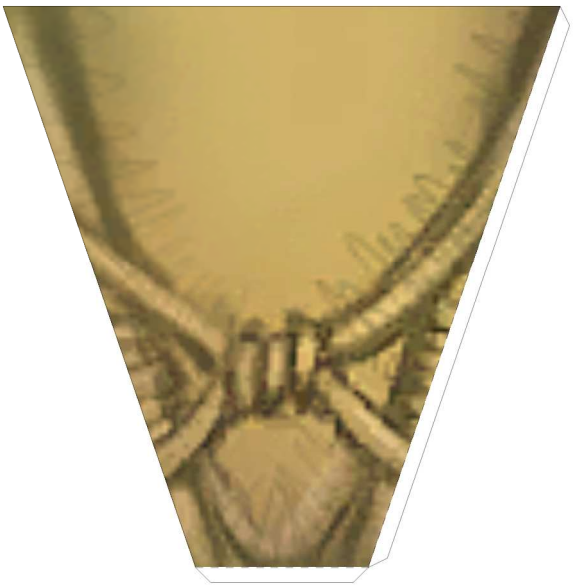
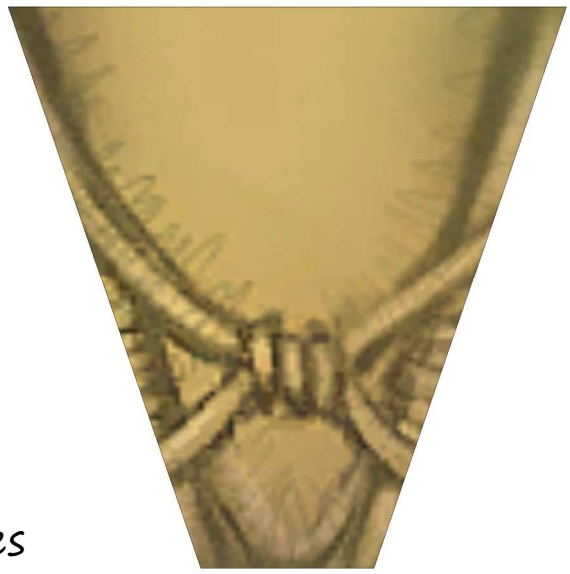
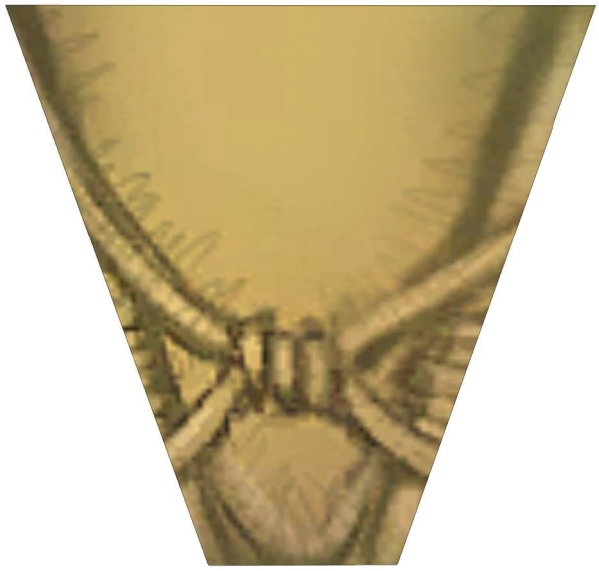
Inside Basket





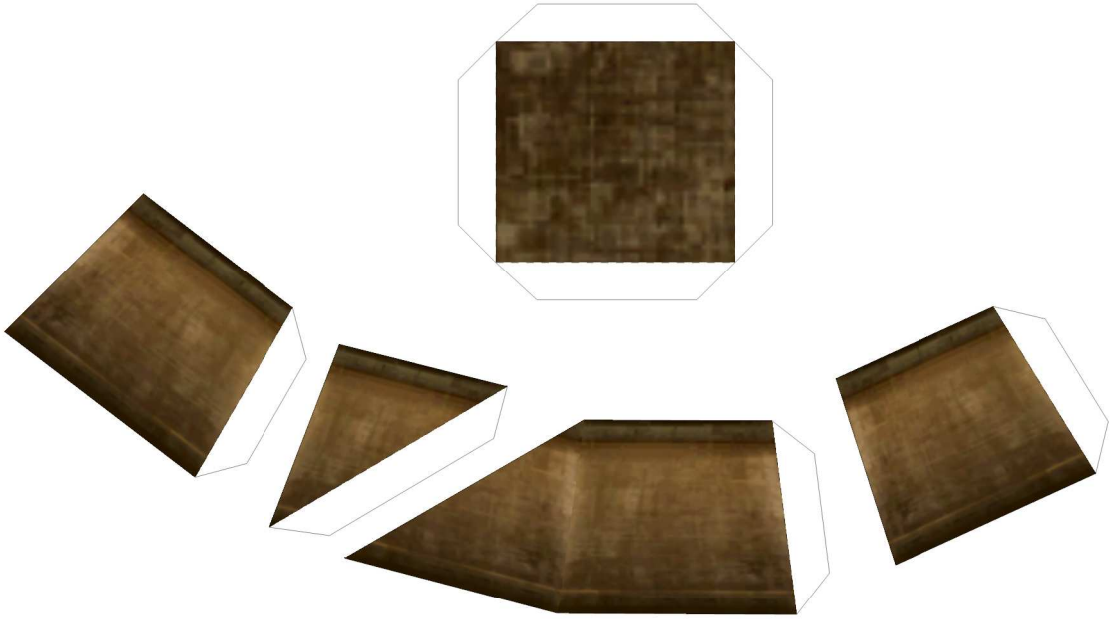
Ropes

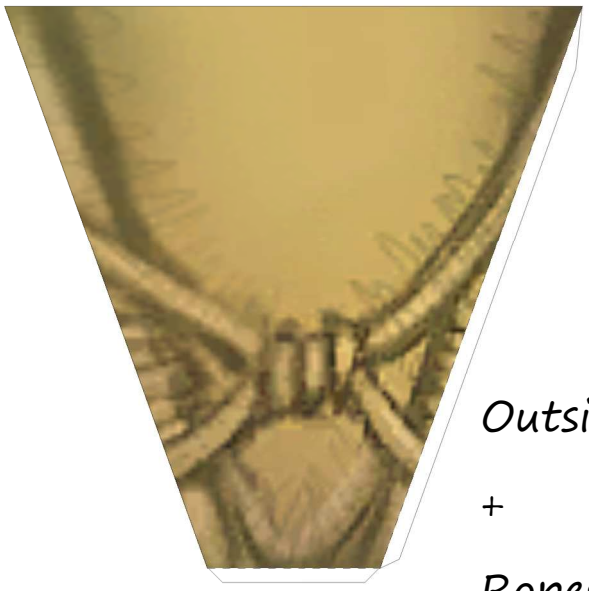


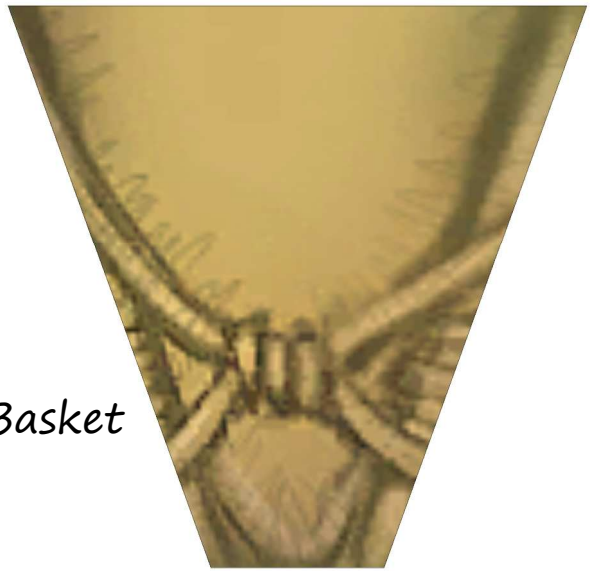
Before adding the outside of the basket onto the inside of the basket, be sure to add the ropes onto the inside of the basket first. This way you do not see gluetabs.

Cut the inside of the ropes away AFTER gluing the inside rope to the outer rope.

The top of the ropes go onto the ballon itself,
for the positions, check the other pdo file included.



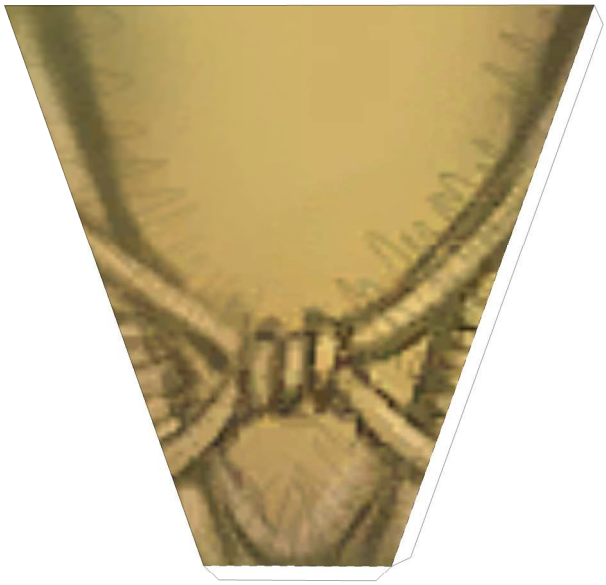


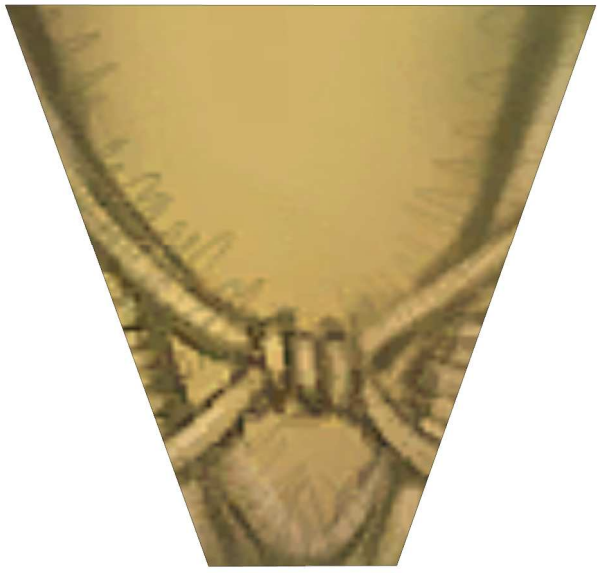


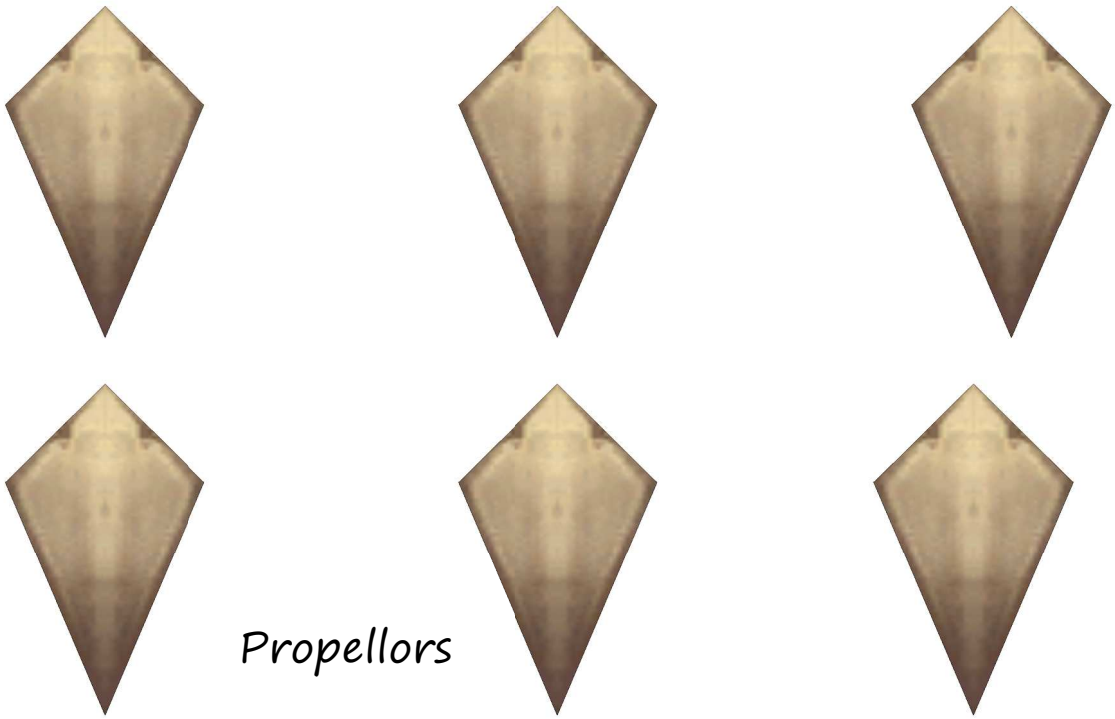
Outside Basket

+

Ropes







Propellors

The next parts are optional. If you want the propellors to be able to move on the wind, add the next three parts. You will have to cut out the middle of the middle part so that the smallest part can fit inside it. The middle part is were the propellors should be added onto. You might have to make the left part smaller, but that depends on how loose you want them to turn.
The right part goes on last so the propellor part won't spin off.
