

- Moo Papercraft Instructions -

Thanks for having downloaded my papercraft!

You need these tools to build this model correctly. From left to right:

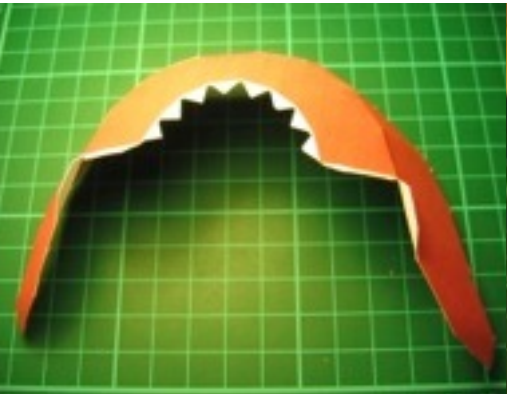

- The printed papercraft (obviously)
- Scissors
- Scoring tools (you can fold by hand too)
- Glue

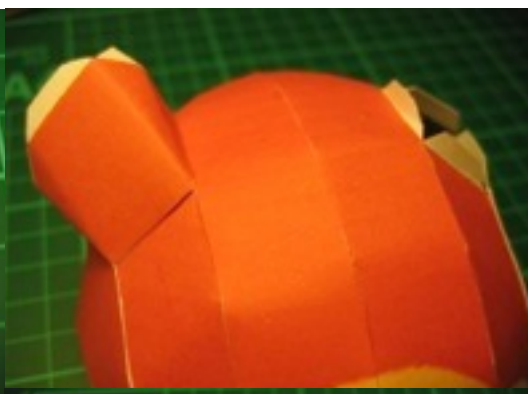

Red colored tabs glue on ears
Blue colored tabs glue on spikes
I suggest to use the instructions
for easier building

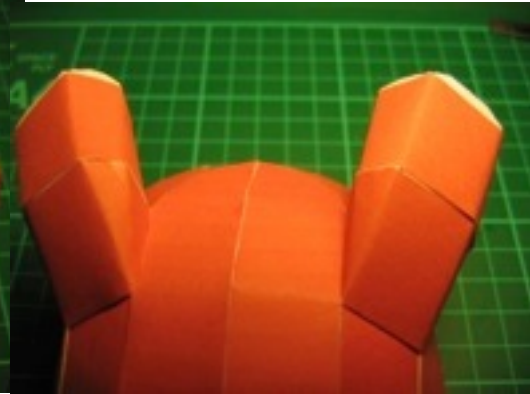

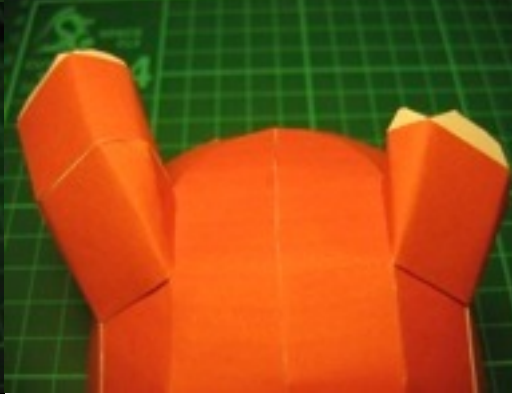

Start by scoring A1, cut it and glue the parts together, cut A2 and glue it on A1.

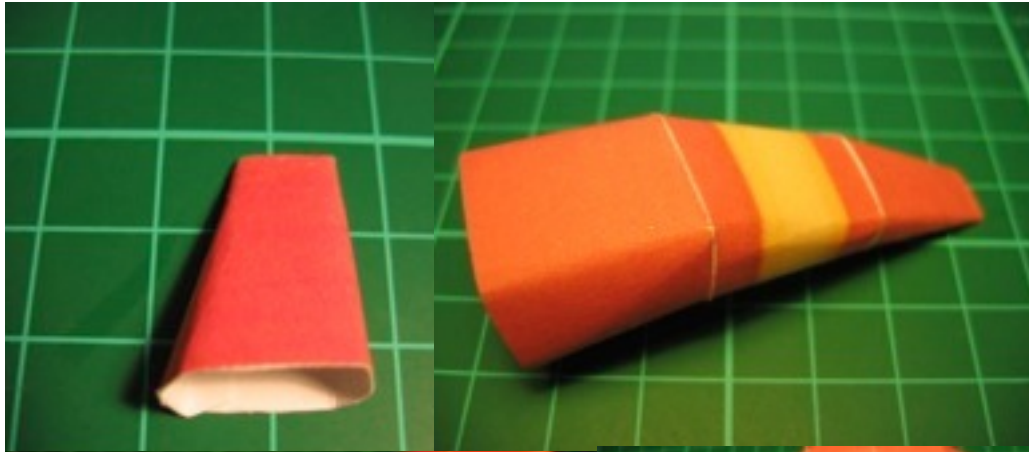

Cut A3 and glue it together, then glue it with A1 (take note that the red border tabs are for ears).

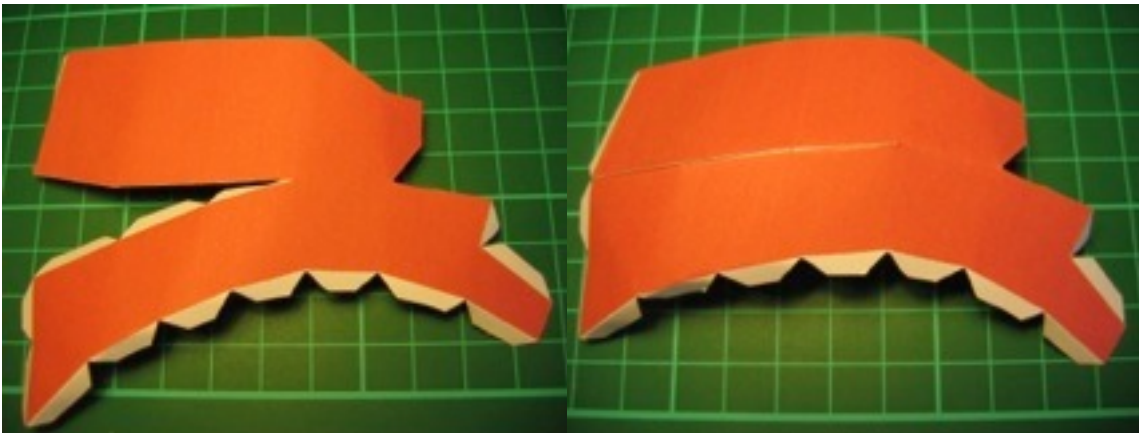

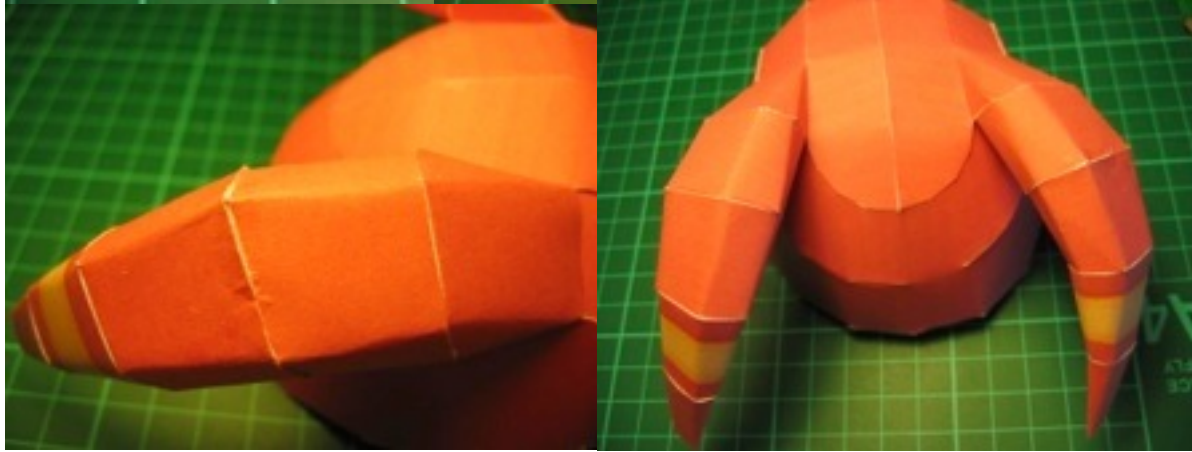

Cut B1 and glue it on the head like in the picture, do the same with C1, then cut B2 and glue it on B1, do the same with C2 and C1.

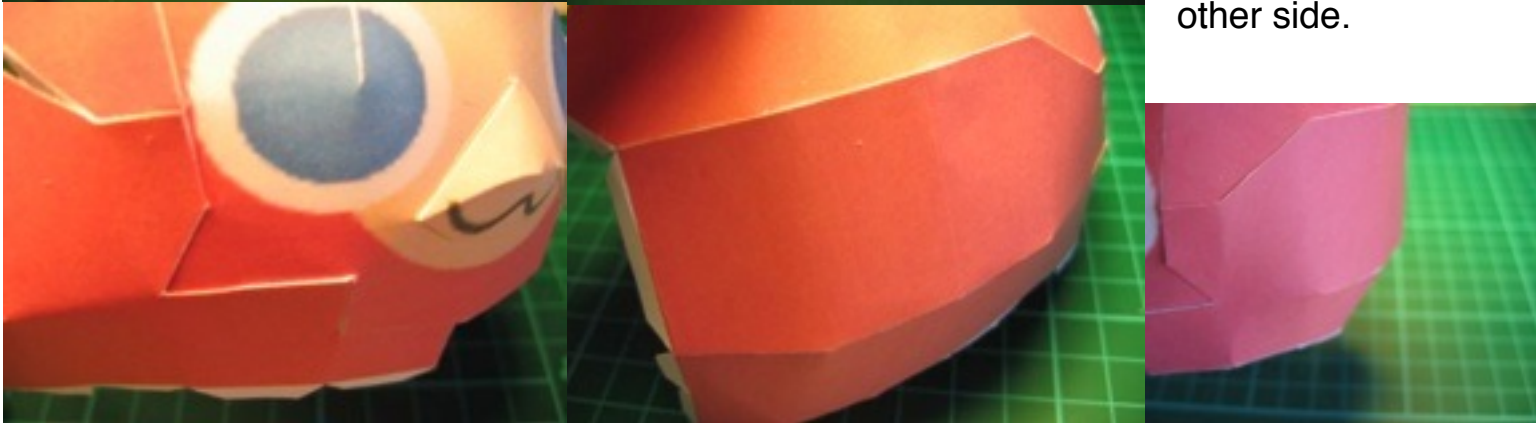

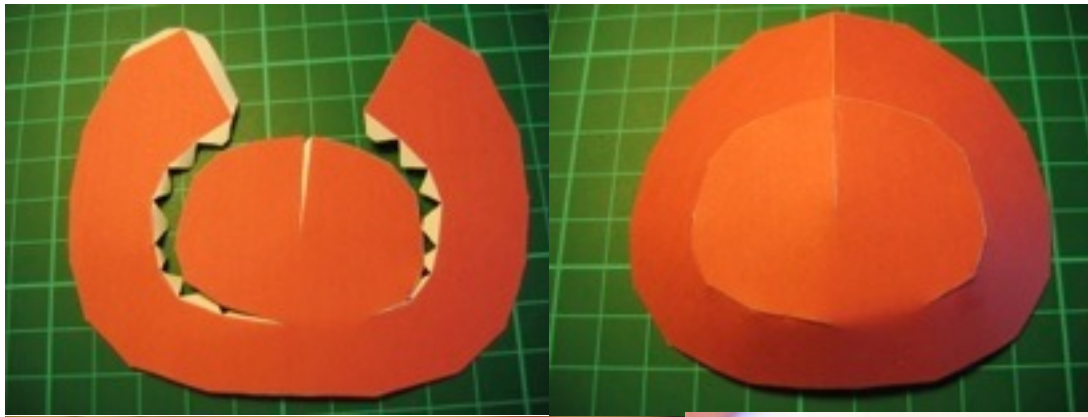

Cut B5, B4 and B3 and glue them together, then glue these on B2, do the same with C5, C4 and C3.

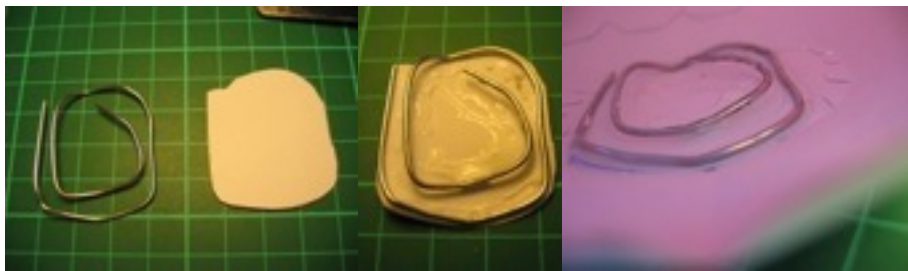

Cut D1 and glue it together, then glue only the parts in the picture on the body, then glue all the rest, do the same with the other side.

Cut D3, glue it together then glue it on a back tab like in the picture, after it glue it with all the other tabs.

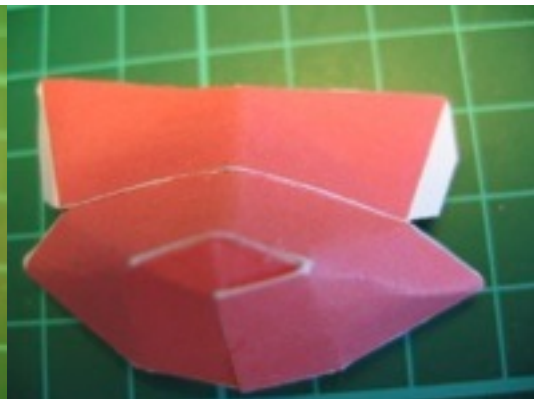

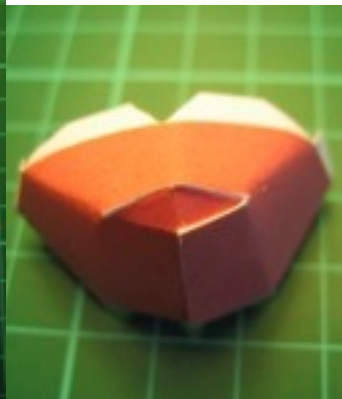

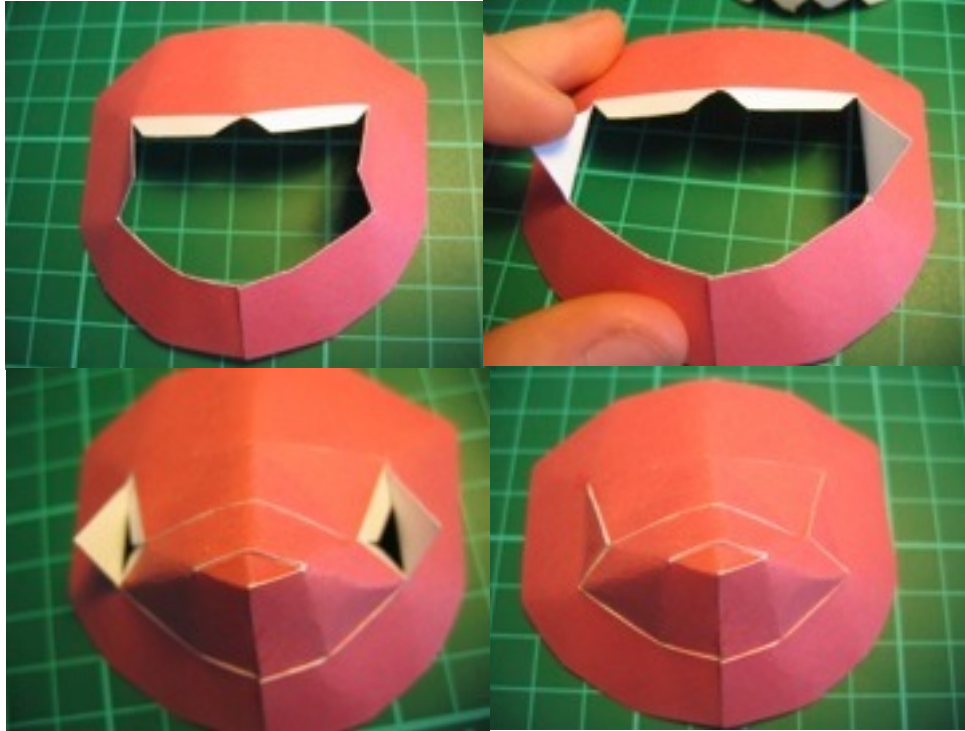

(Optional Step)

Since Moo's ears are big, the model might unbalance, so get a clip, shape it like the bottom, cut its shape on paper, glue them together and glue them inside moo's bottom

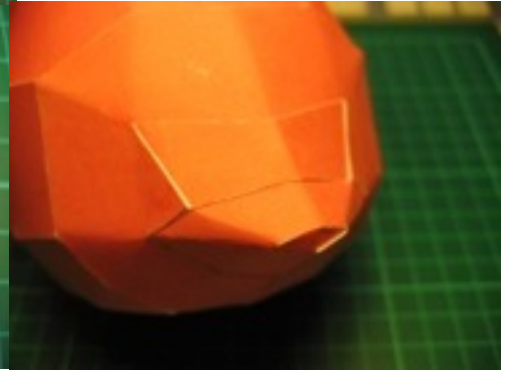

Cut E1, E2 and E3. Glue E1 together and glue E2 on E1.

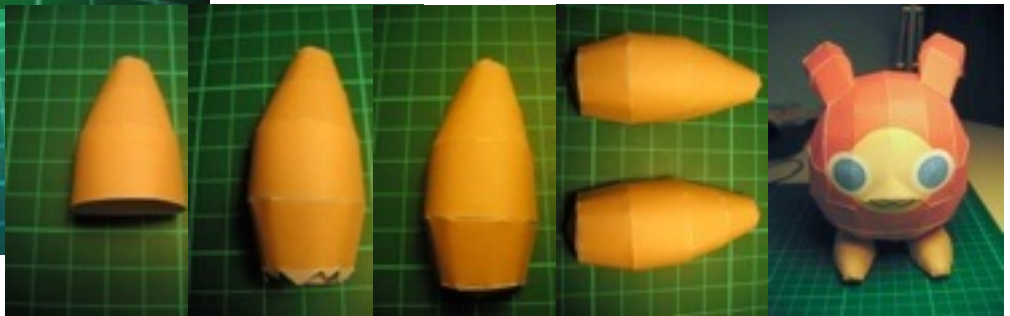

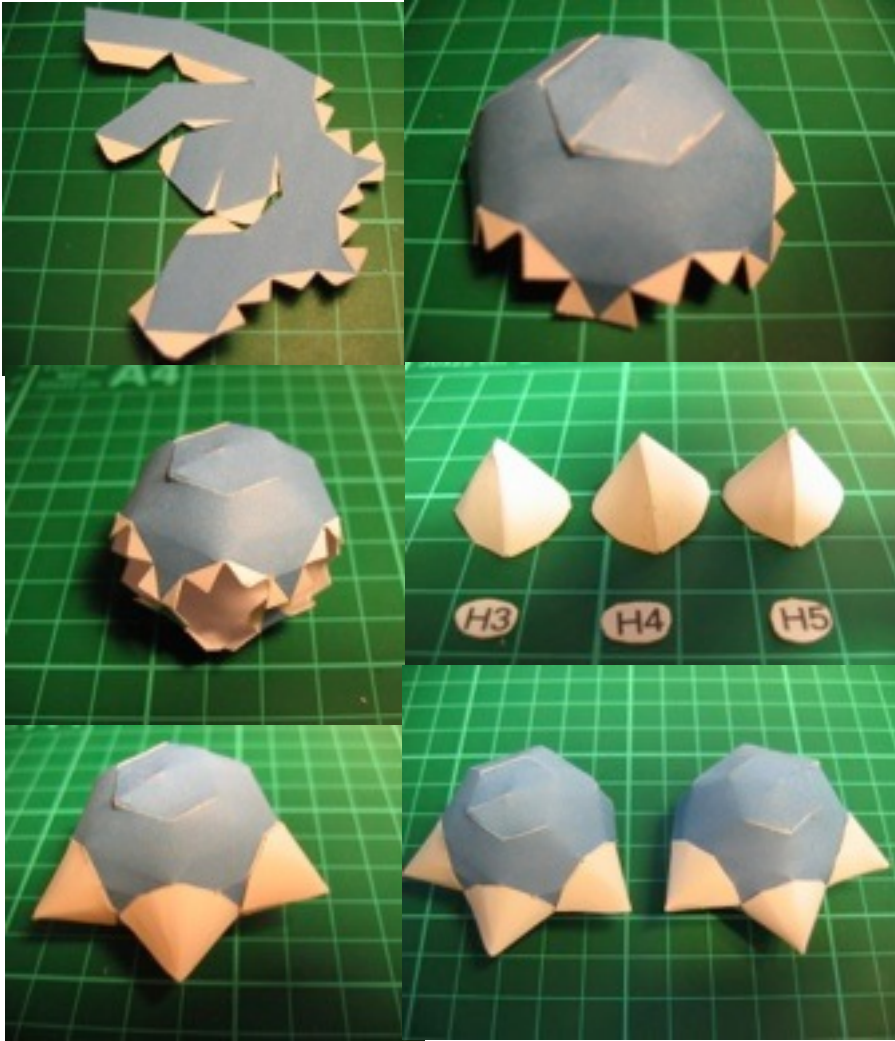

Glue E3 together and fold the triangular parts a bit back to glue easily E1-E2 on it, then glue the folded back parts on E1-E2. Glue the done tail on the body.

Cut F1 and F2, glue F1 together and F2 together then glue both together. Continue glueing the other pieces until you close with F6. Do the same with the other foot then glue them on the body.

Cut H1 and glue it together.

Cut H2, Glue it together then glue it with H1. Cut and glue H3, H4 and H5, H3 glues on the right tabs, H4 on the left and H5 on the center (same for i3, i4 and i5 on the other hand). Cut the other hand and glue it together. Now glue the hands on the body.

You're Done!

Thanks for building another of my papercrafts!
