paper model

# Welcome to the Sea Base papermodel!

I originally created this model by hand from scratch using trial and error and wasting ALOT of blue printed paper. (i'm sorry trees, and ink trees). I aimed to style it in the cartoon graphic style of the Wind Waker game, as you can tell by the swirls I designed and the ripple texture. Since I was just making it for myself at home to place my *King of Red Lions* model in, I hadn't planned on it going any further than there. But now I'm happy to be able to finally share this model with others. In this new version, I have also included a optional set of extra bow waves (parts 11B & 12B) which match closer to the original game's bow waves.

This papermodel was created without modelling or 3D software, so it may not be absolutely perfect. I hope you enjoy making the model and I know your king will love having the watery home. If you have any questions or troubles with the papermodel, feel free to send me an email at: [paperjoz@hotmail.com](mailto:paperjoz@hotmail.com) and i'll endeavor to get back to you. And please feel free to email me any photos of your finished *Sea Base*, i'd love to see them.

Thanks,  
paperjoz, 2009

## Important! - Printing Note:

Since the Ninjatoes *King of Red Lions* model needs to fit inside the *Sea Base*, it must be printed to the correct scale. To do this, you must print the *Sea Base* papermodel at **100% scaling** on your printer. Make sure that the option to 'shrink to fit page' is **NOT** selected. This shrink to fit option can make a difference of around 2cm in sizing of the final print. If you do find that you've accidentally printed it to the wrong sizing, you should be able to trim the King's hull hole (part 8) to be a little larger.

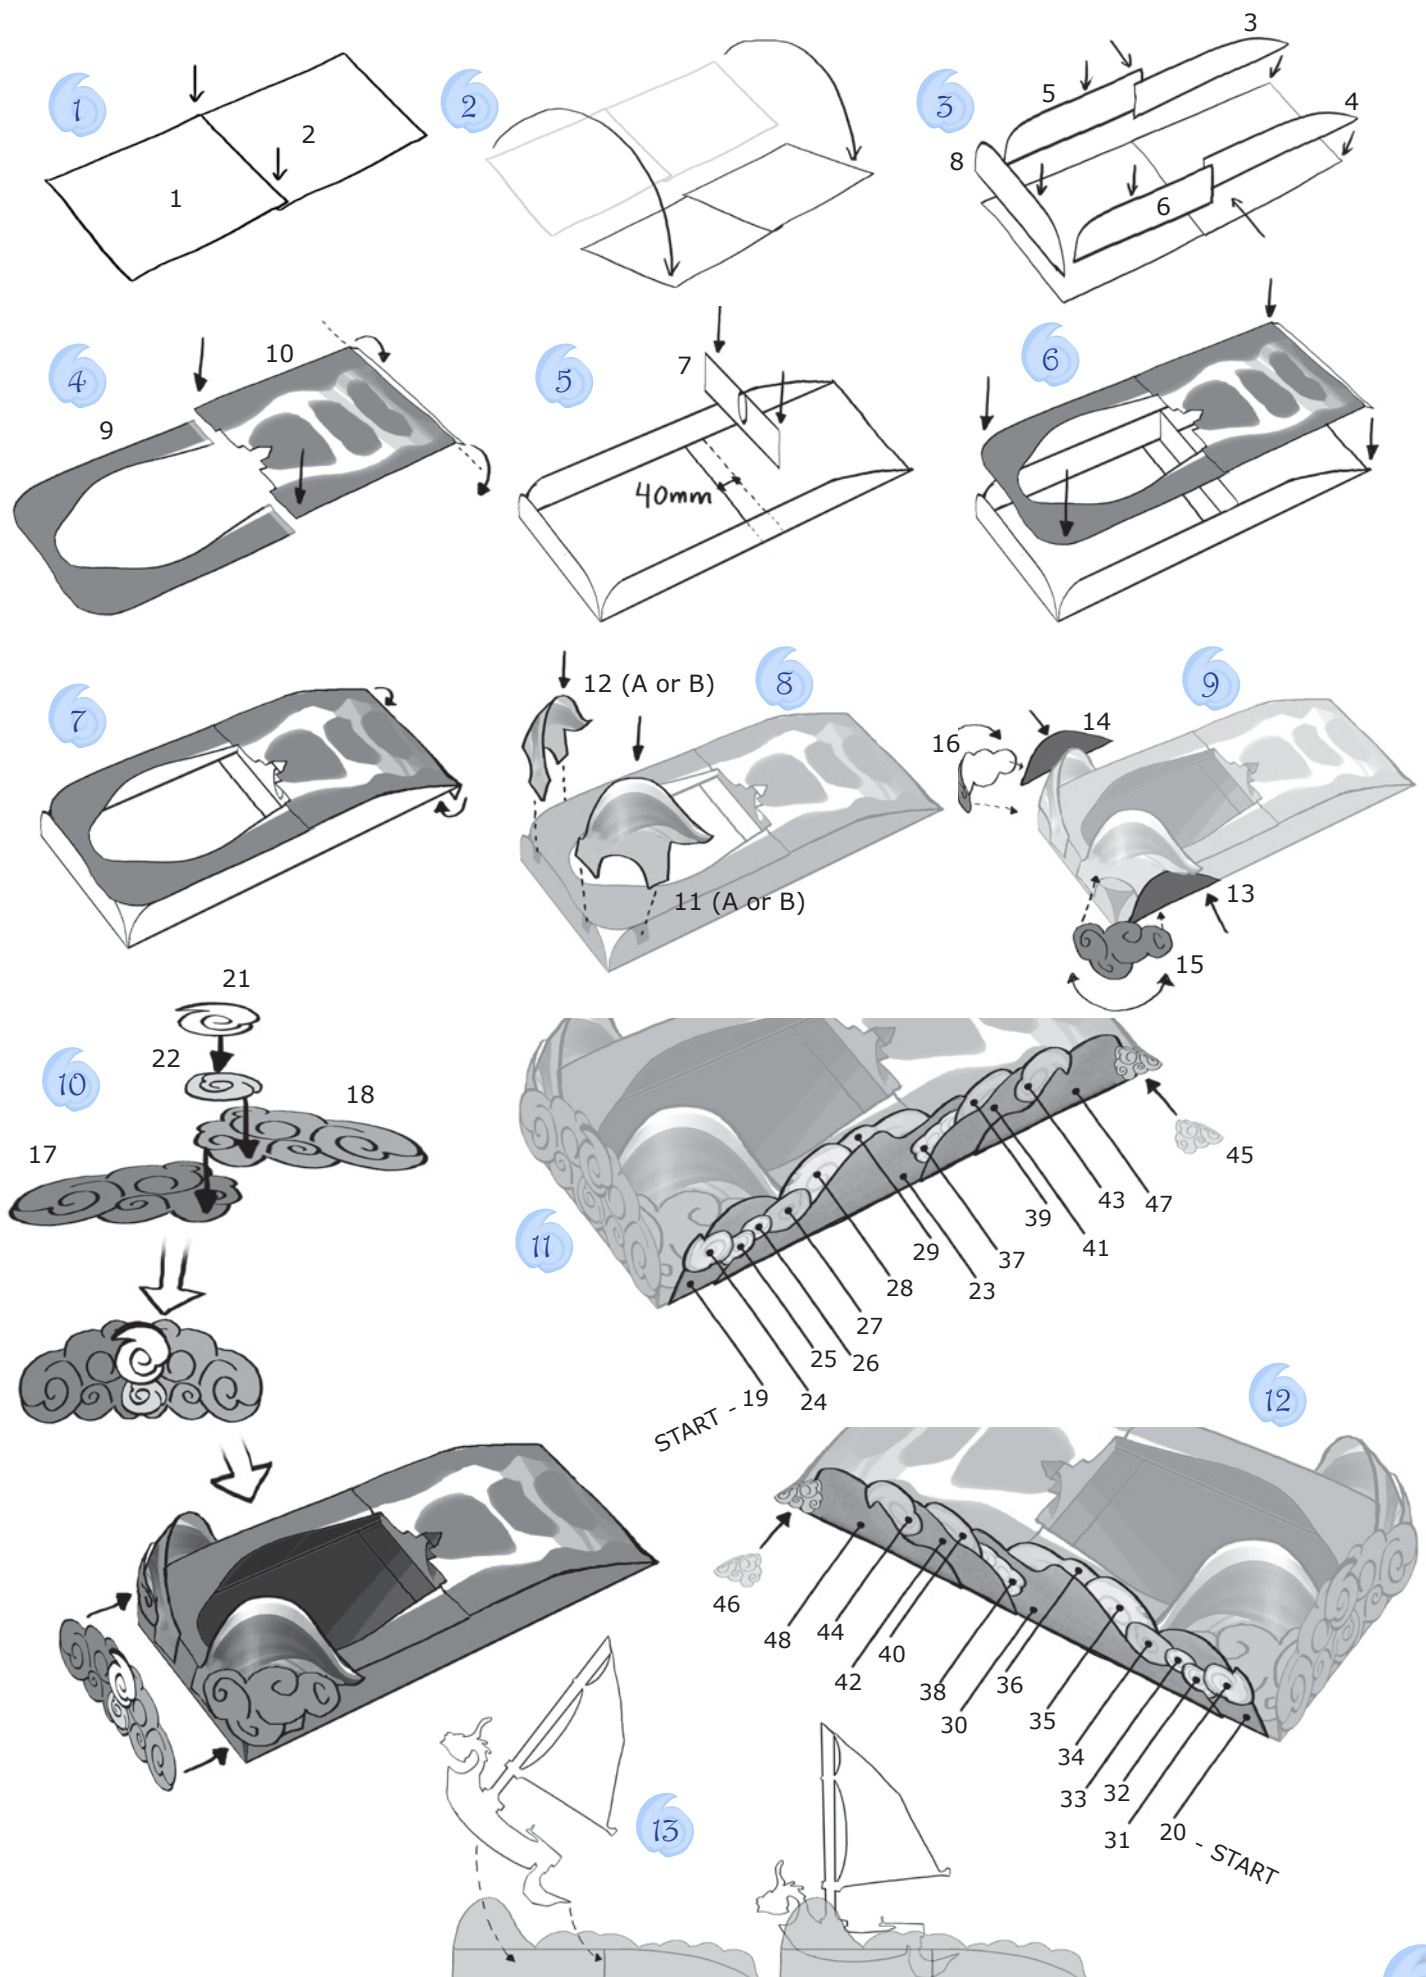

Also, I highly recommend printing the *Sea Base* papermodel on cardstock or paper around the 175gsm -200gsm weight. This provides good strength to support the King model's weight. As a second option, I have created the *Sea Base* model to be able to accomodate the Ninjatoes *King of Red Lions Stand* papermodel inside. If you're worried about paper strength, simply make the Ninjatoes King **Display Stand** Model and place it inside the *Sea Base* model to give extra support to King's hull.

## Link modified papermodel

There is also available a modified Wind Waker *Link* papermodel available that is created to be in scale with the *King of Red Lions* papermodel, as well as have a hand grab King's rudder handle and finally some mods to *Link's* face. As it is a copyrighted papermodel, it cannot be downloaded. However it can be sent via email to those who request it. Please email me at [paperjoz@hotmail.com](mailto:paperjoz@hotmail.com) if you would like a copy of the Link Model.
