

# Slowbro

By PODragon

Build by Luis

**Paper Pokés**  
[www.pokemonpapercraft.net](http://www.pokemonpapercraft.net)

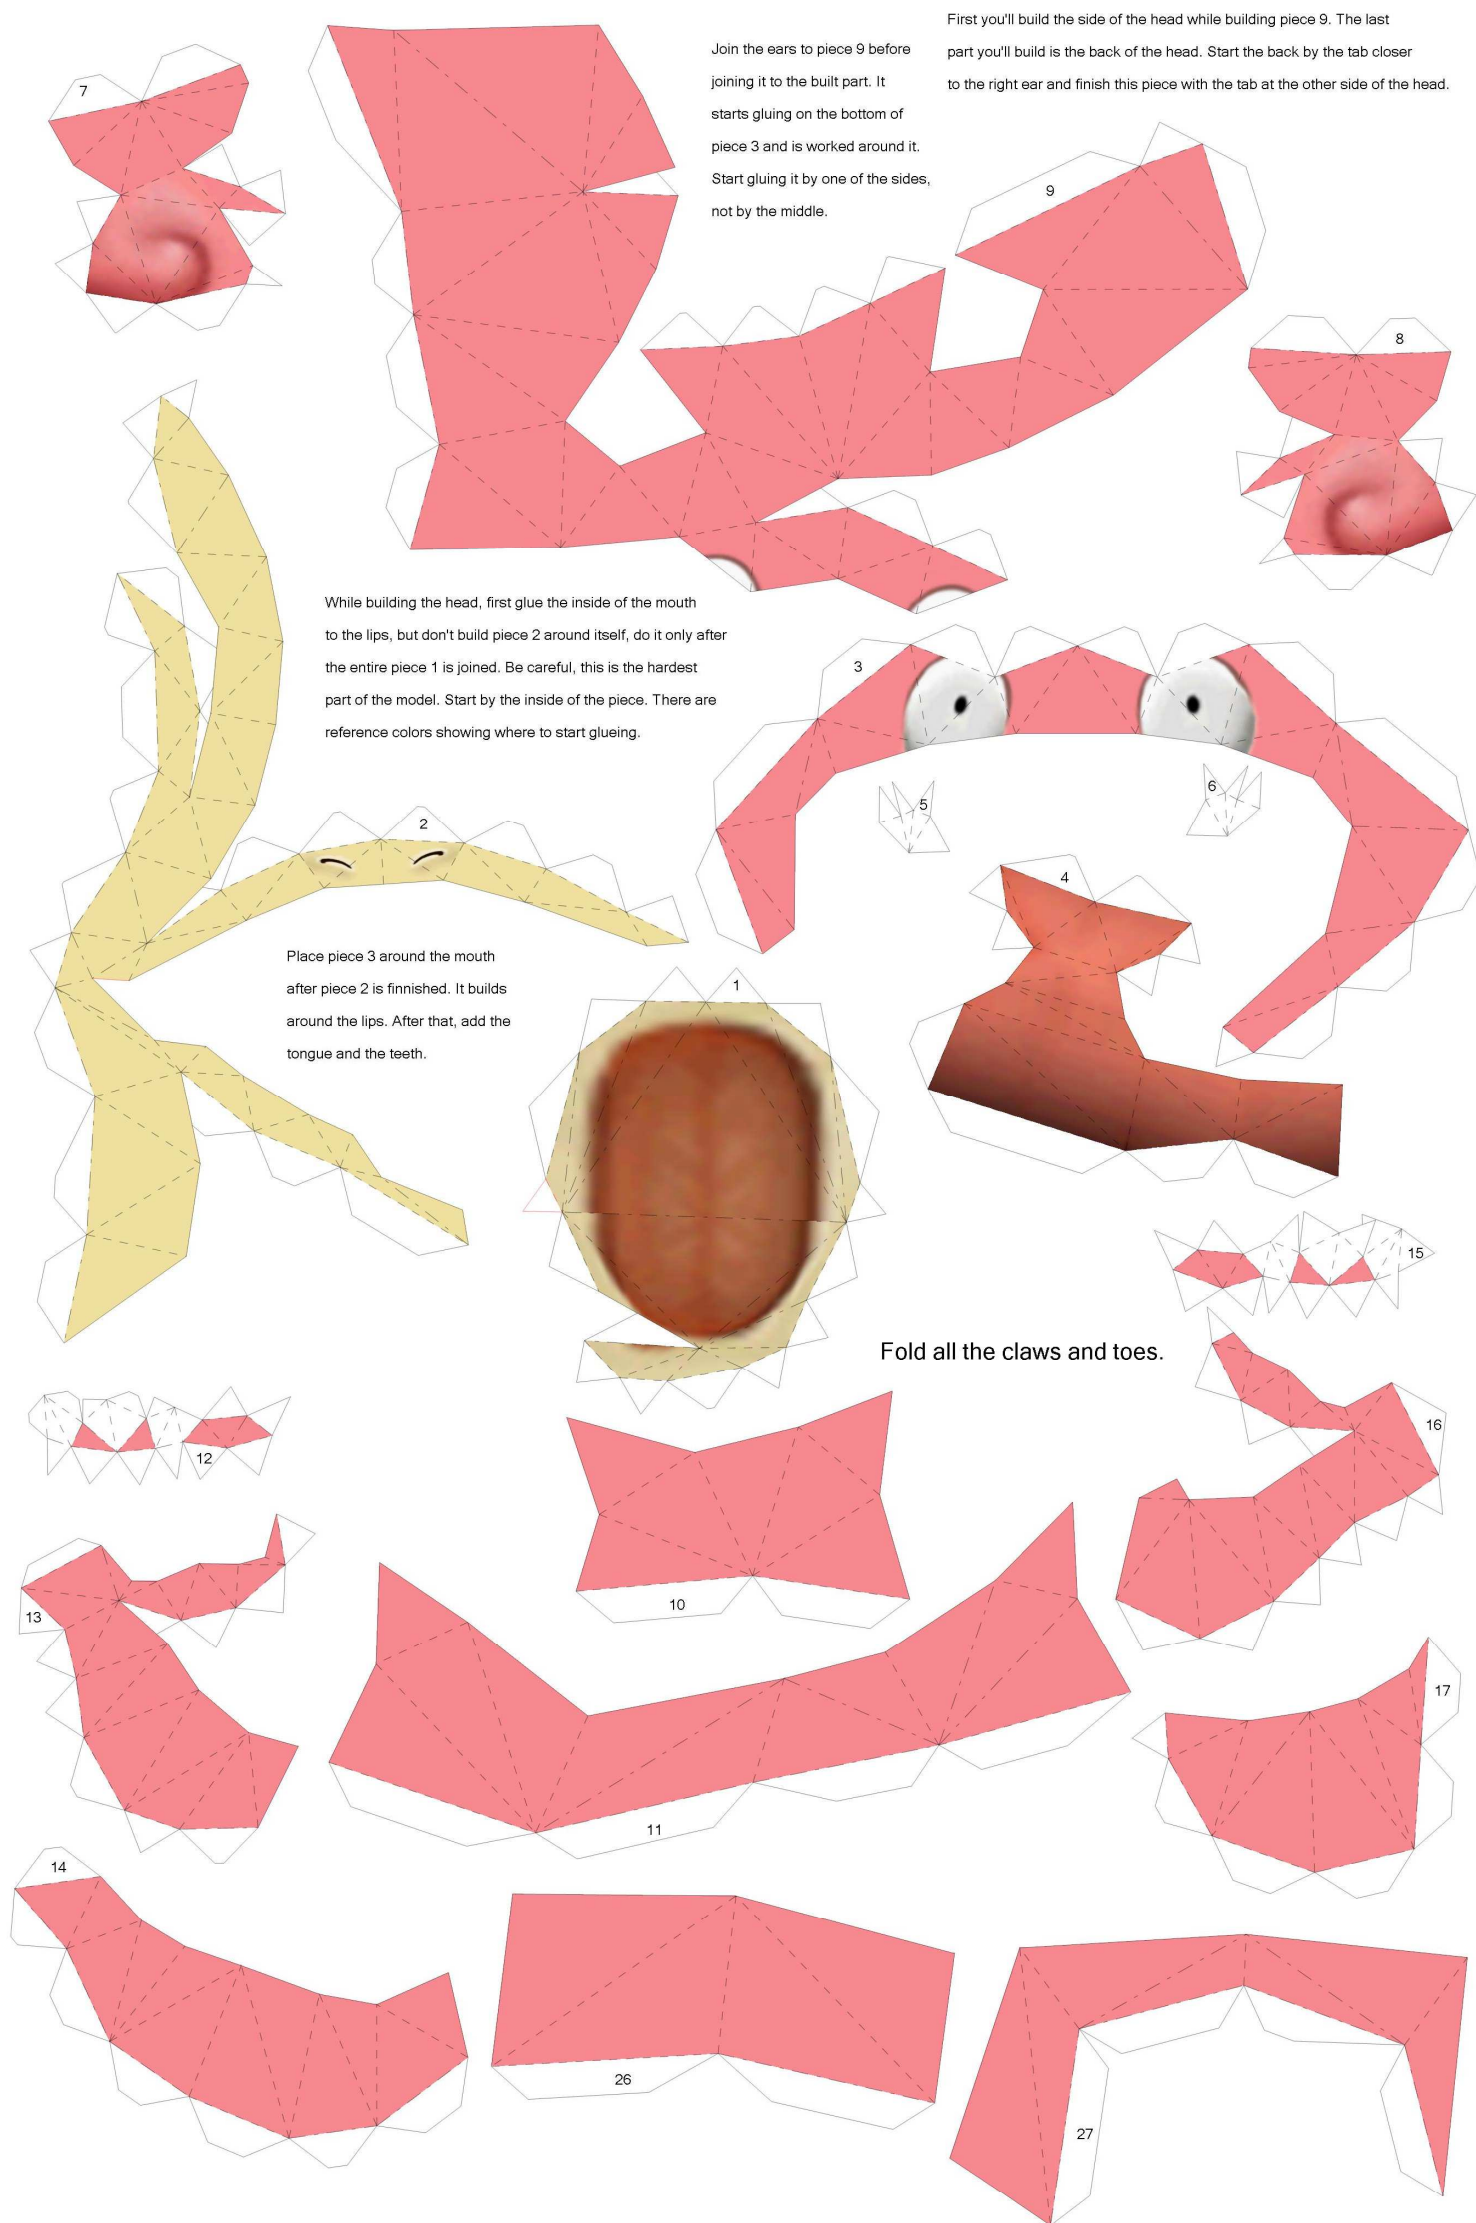

First you'll build the side of the head while building piece 9. The last part you'll build is the back of the head. Start the back by the tab closer to the right ear and finish this piece with the tab at the other side of the head.

Join the ears to piece 9 before joining it to the built part. It starts gluing on the bottom of piece 3 and is worked around it. Start gluing it by one of the sides, not by the middle.

While building the head, first glue the inside of the mouth to the lips, but don't build piece 2 around itself, do it only after the entire piece 1 is joined. Be careful, this is the hardest part of the model. Start by the inside of the piece. There are reference colors showing where to start glueing.

Place piece 3 around the mouth after piece 2 is finished. It builds around the lips. After that, add the tongue and the teeth.

Fold all the claws and toes.

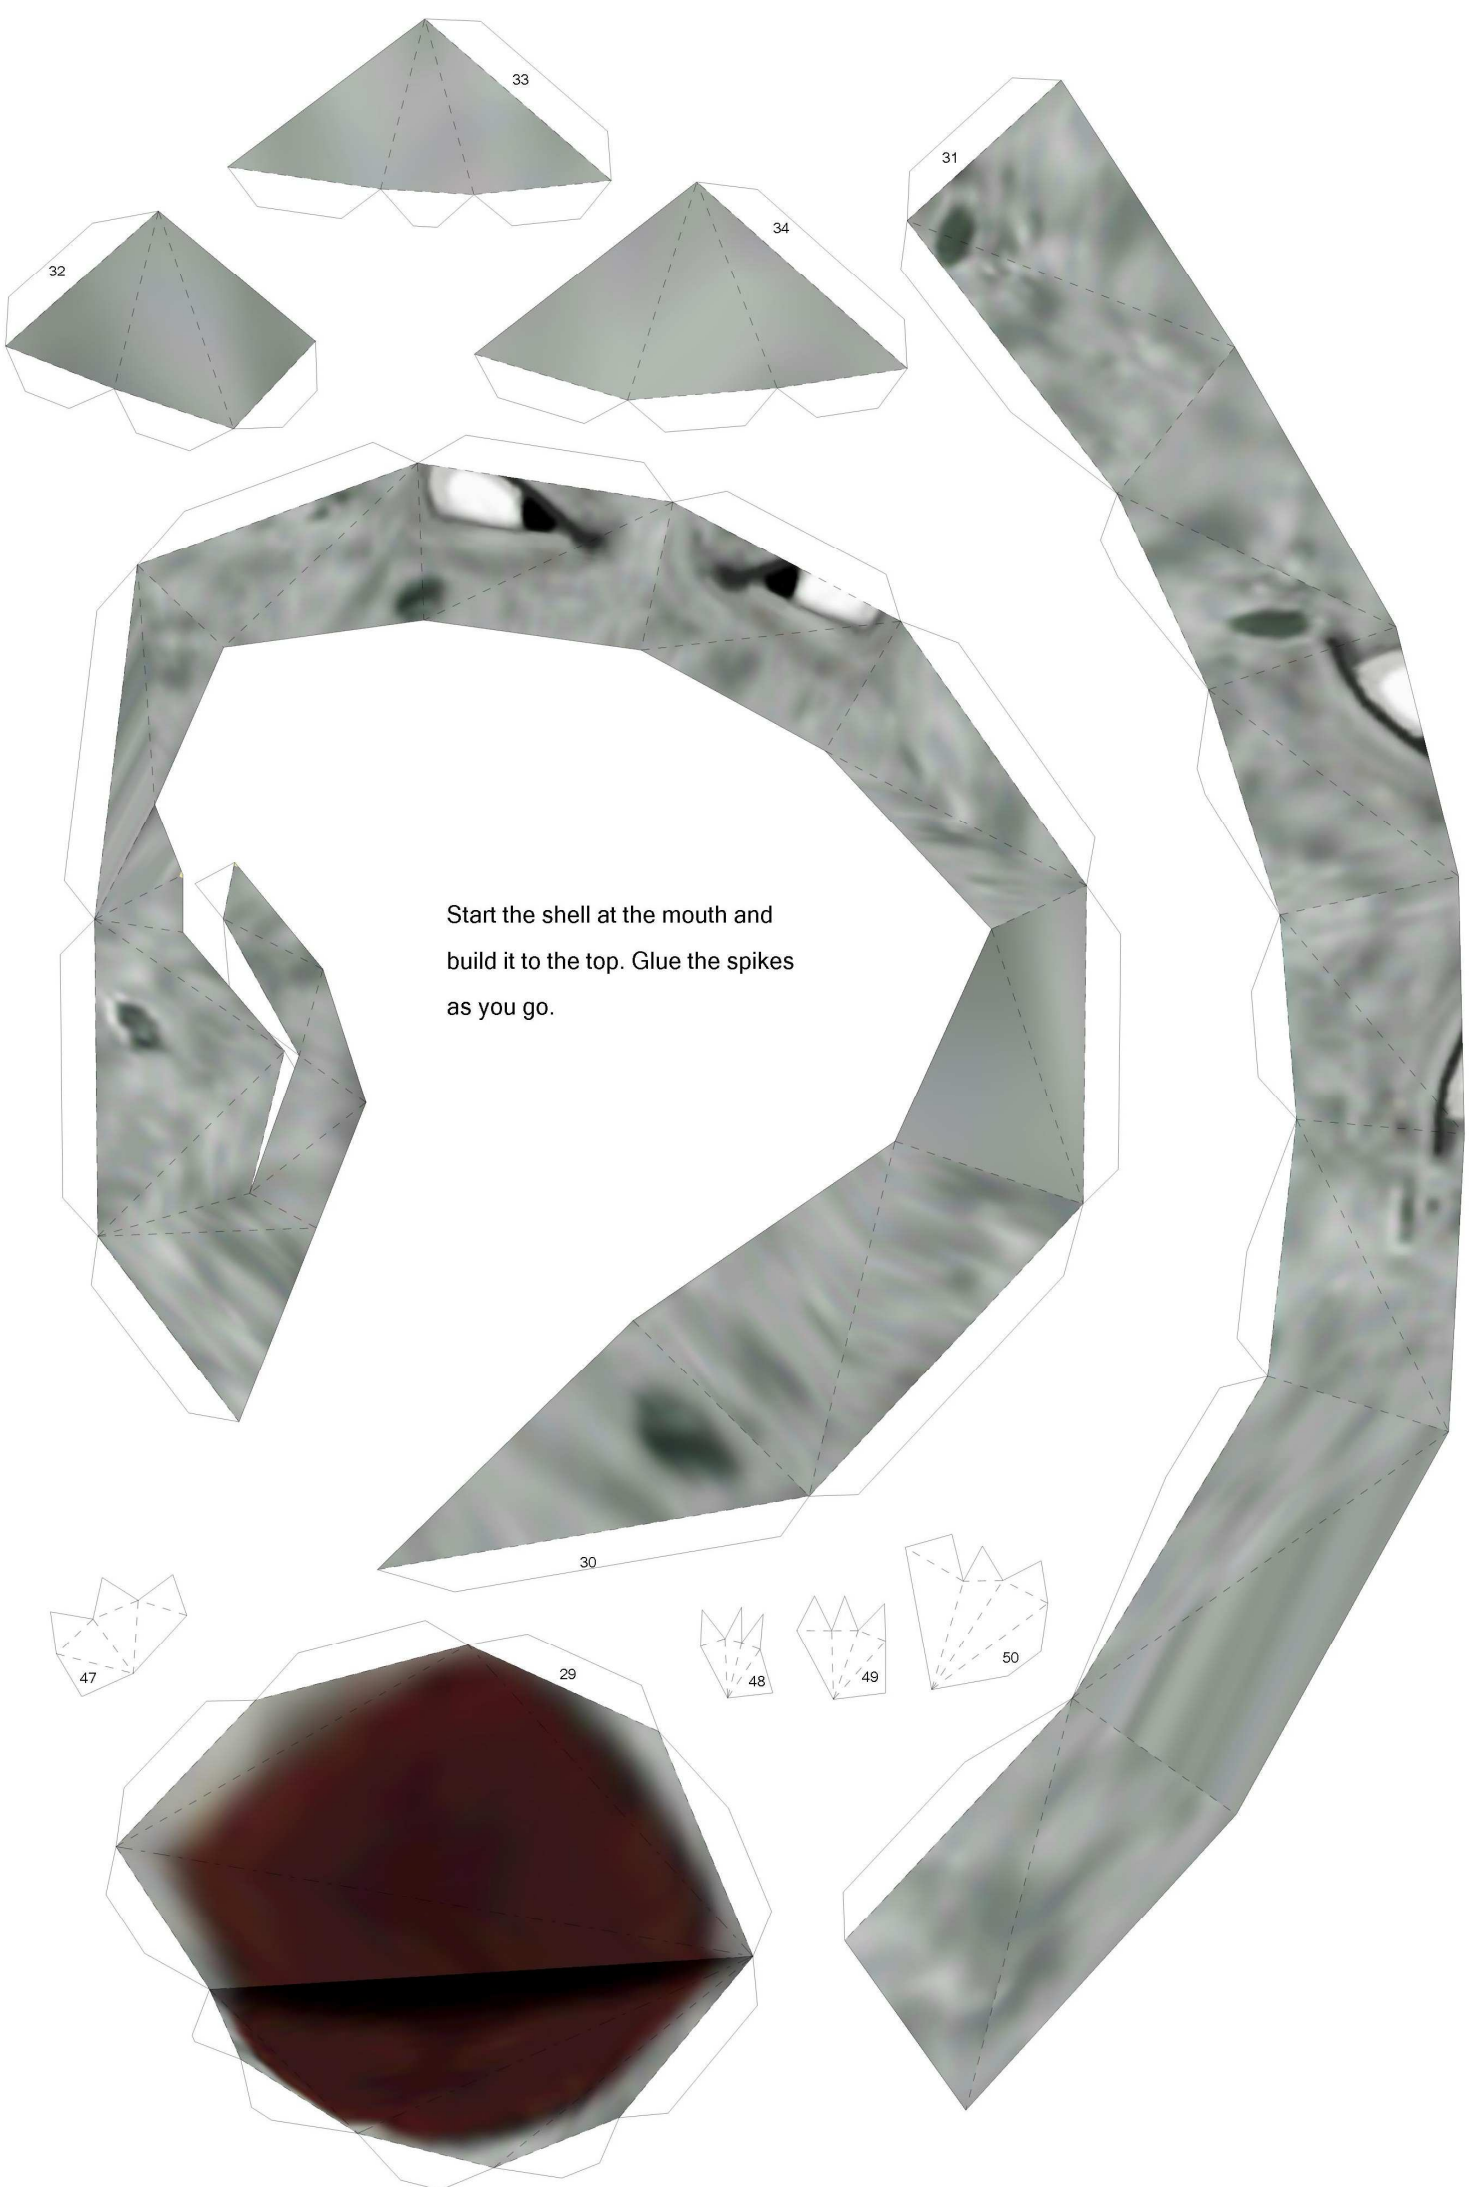

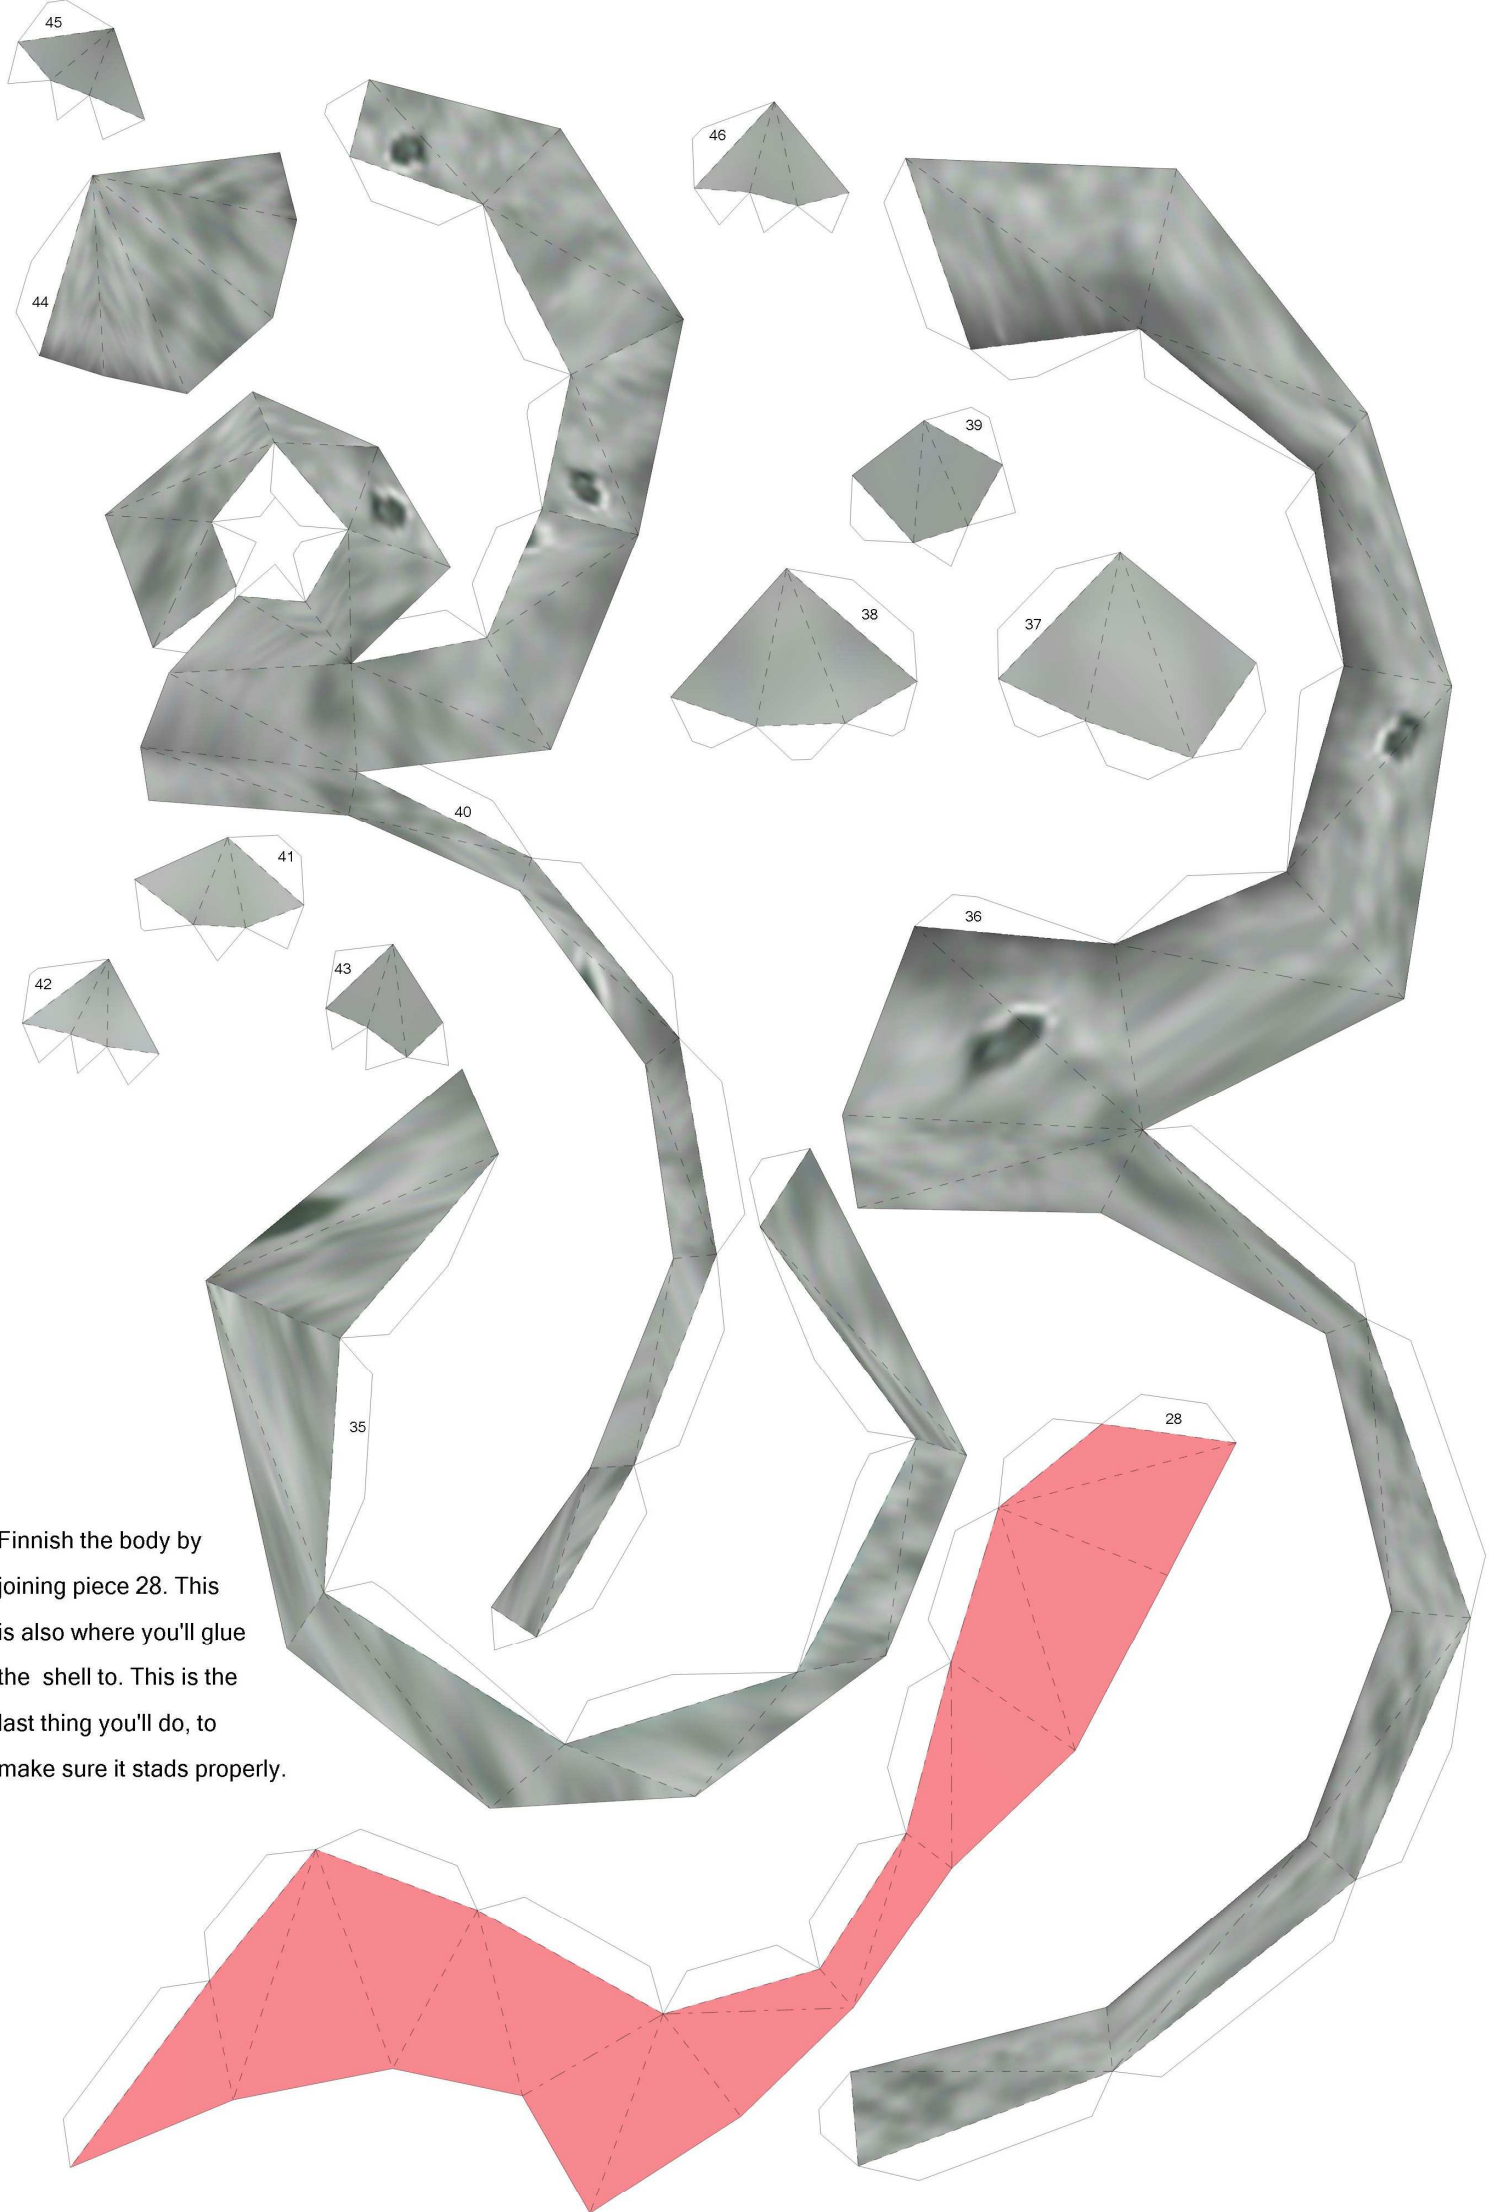

If you want it to keep the pose of the picture, make it stand on a small object.

Start the legs at the toes and build them up. Glue them to the rest of the body as the numbers get to them

Finnish the body by joining piece 28. This is also where you'll glue the shell to. This is the last thing you'll do, to make sure it stads properly.
