

# Dragonite V2

By POdragon

Build by LuIS

**Paper Pokés**  
*www.pokemonpapercraft.net*

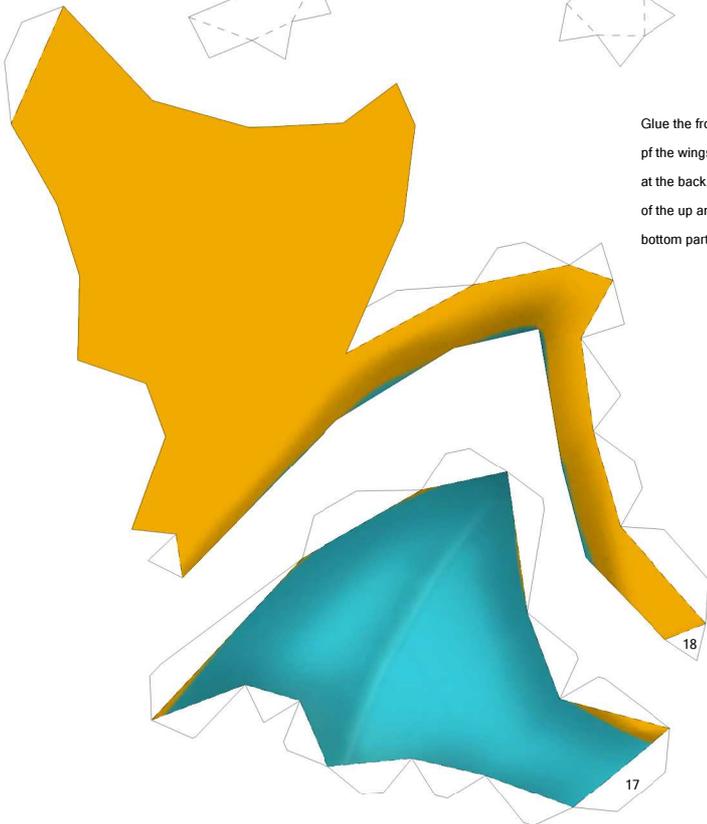

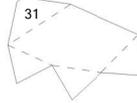

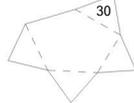

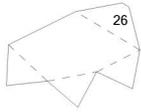

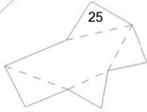

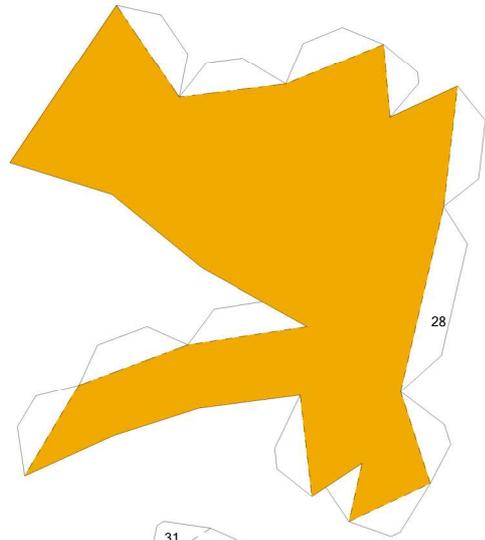

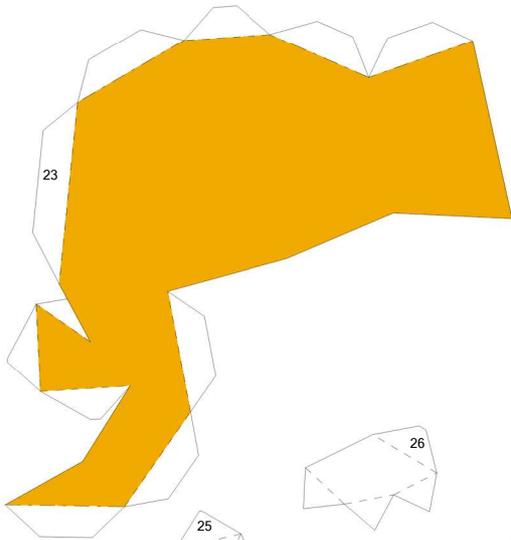

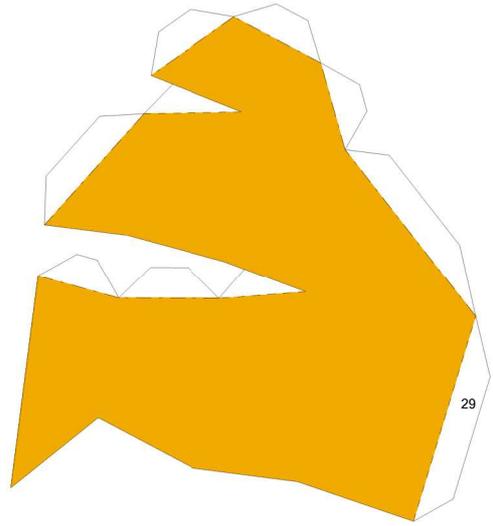

Start at the head and work down.  
 Be carefull with the antenaes, they are small and will need tweezers.  
 Glue them with good glue after the entire head is built. Add the horn at the same time.

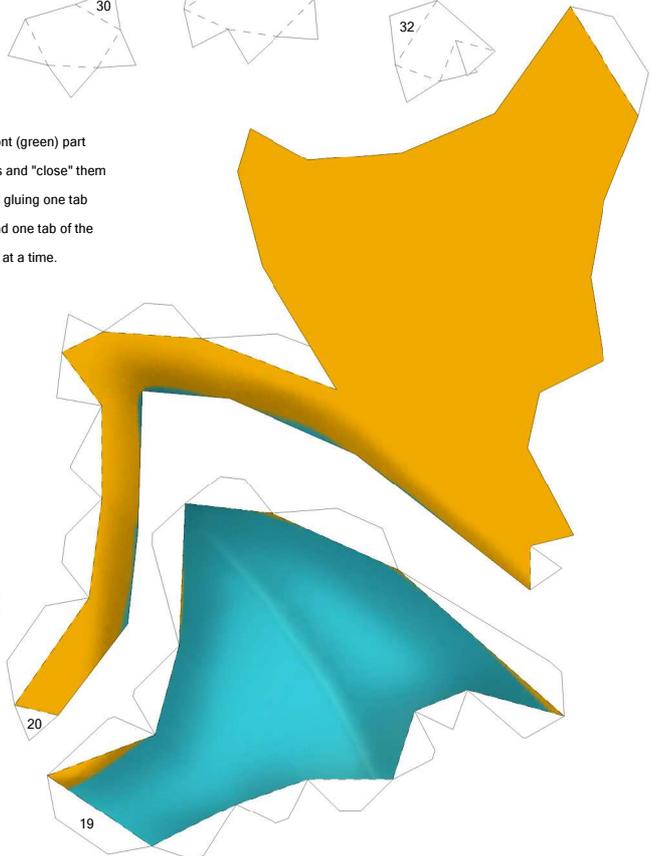

Glue the wings to piece 21 before gluing piece 21 to 16.

Place the arms at the body before gluing the claws and glue the claws of the first arm before gluing the second arm to the body.

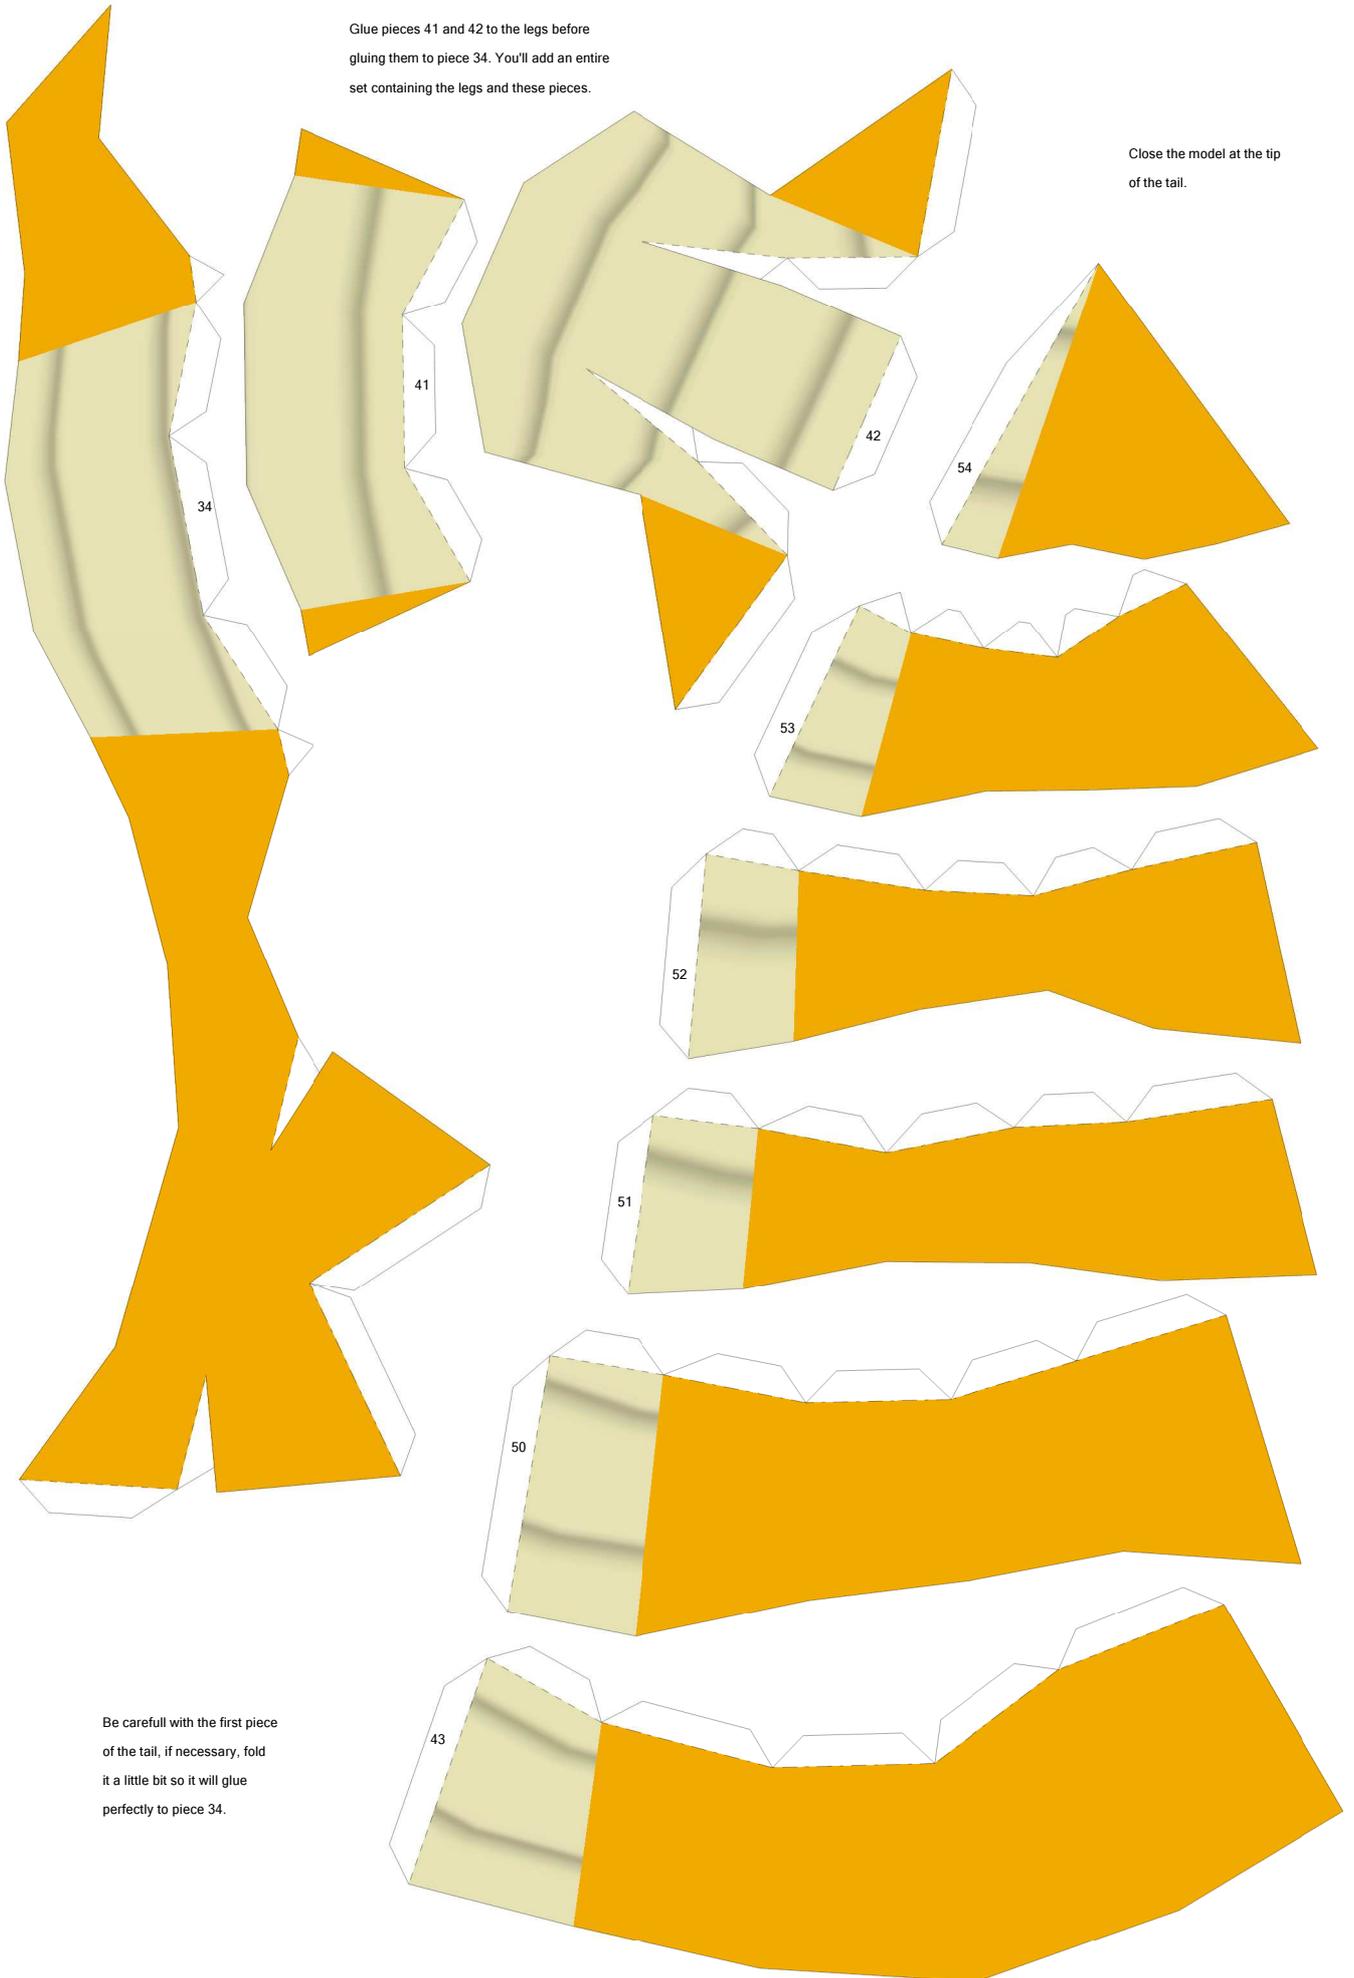

Glue the front (green) part of the wings and "close" them at the back, gluing one tab of the up and one tab of the bottom part at a time.

Glue pieces 41 and 42 to the legs before  
gluing them to piece 34. You'll add an entire  
set containing the legs and these pieces.

Close the model at the tip  
of the tail.

Be careful with the first piece  
of the tail, if necessary, fold  
it a little bit so it will glue  
perfectly to piece 34.
