View of completed model

Total length : approx. 7 m ; weight : approx. 3 t ;
taxonomy : order Ornithischia, suborder Thyreophora, family Ankylosauridae
Period : late Cretaceous period (approximately 70 million years ago) ; habitat : North America

Euoplocephalus

Editor :  THE NATIONAL SCIENCE MUSEUM
国立科学博物館

The *Euoplocephalus* is an herbivorous dinosaur that lived in North America during the late Cretaceous period of the Mesozoic era. As implied by its name, which means "well-armed head," one of the *Euoplocephalus* most outstanding characteristics was the hard bony armor that encased its body. Approximately seven meters in length and with a heavy appearance, the *Euoplocephalus* may look like a slow-moving dinosaur. But the lightness of its armor suggests it may have moved with surprising speed. At the tip of its tail was a lump of bone, which the *Euoplocephalus* may have swung like a hammer in self-protection. However, no direct evidence has been found that indicates the tail was used in this way.

* This model was designed for Papercraft and may differ from the original in some respects.

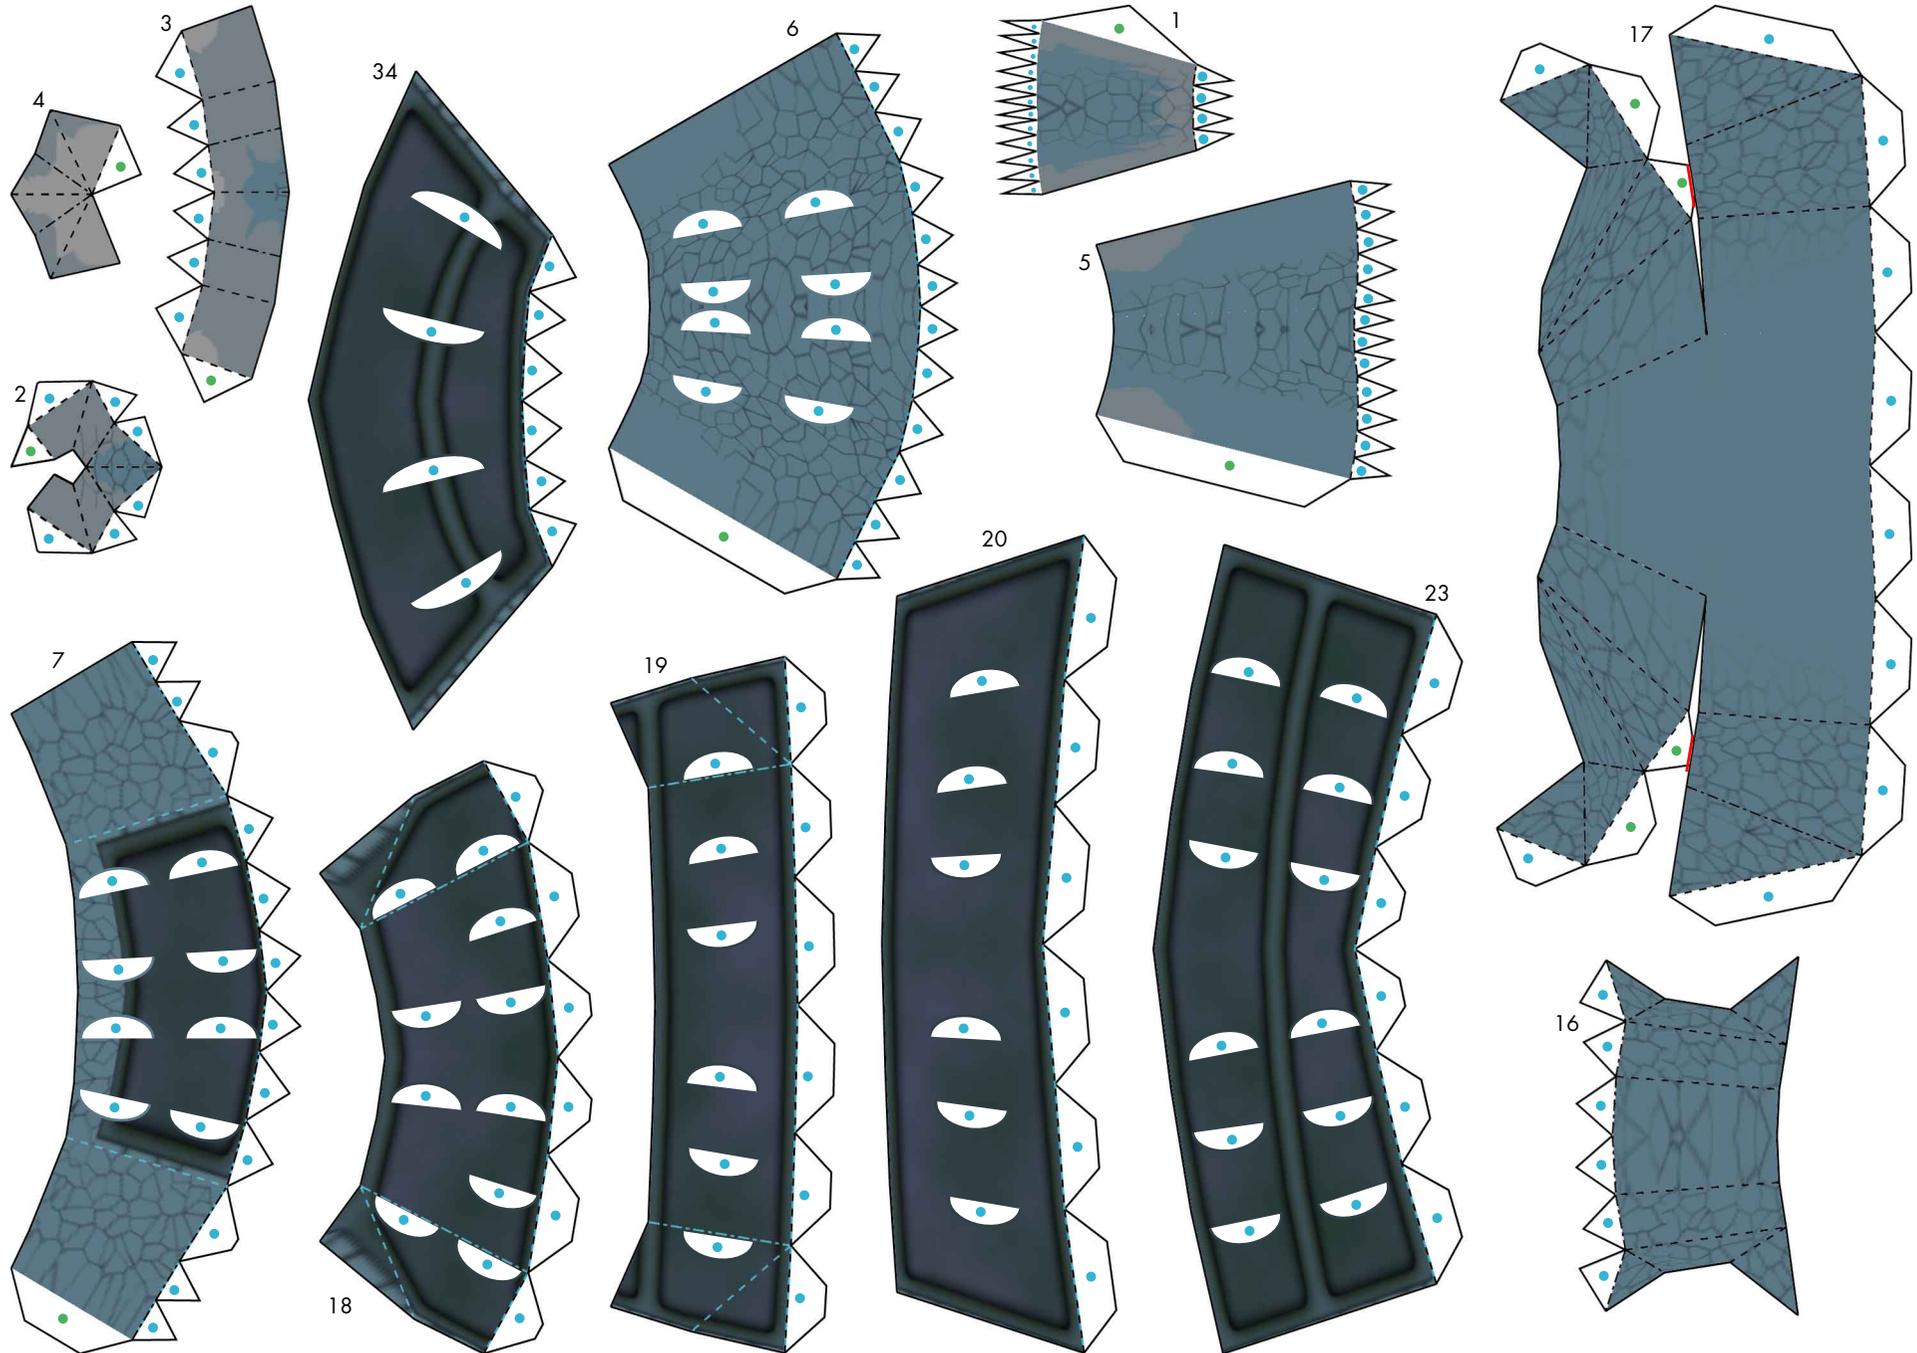

■ Parts list (pattern) : Five A4 sheets (No. 1 to No. 5)

■ No. of Parts : 104

* Build the model by carefully reading the Assembly Instructions, in the parts sheet page order.
