

View of completed model

Total length : 90 cm ; weight : approx. 3 kg ;
taxonomy : order Saurischia, suborder Theropoda, family Dromaeosauridae
Period : Early Cretaceous period (approximately 80 million years ago) ; habitat : the Americas

Bambiraptor

Editor :  THE NATIONAL SCIENCE MUSEUM
国立科学博物館

The *Bambiraptor* is a small carnivorous dinosaur that lived in North America during the late Cretaceous period of the Mesozoic era. Its scientific name comes from the holotype specimen of a juvenile *Bambiraptor*, which measured a mere 90 cm in length. Despite many bird-like characteristics, *Bambiraptor* lived approximately 80 million years after birds had branched off from dinosaurs. Although "Velociraptors" such as the *Bambiraptor* continued to evolve, they never evolved into birds.

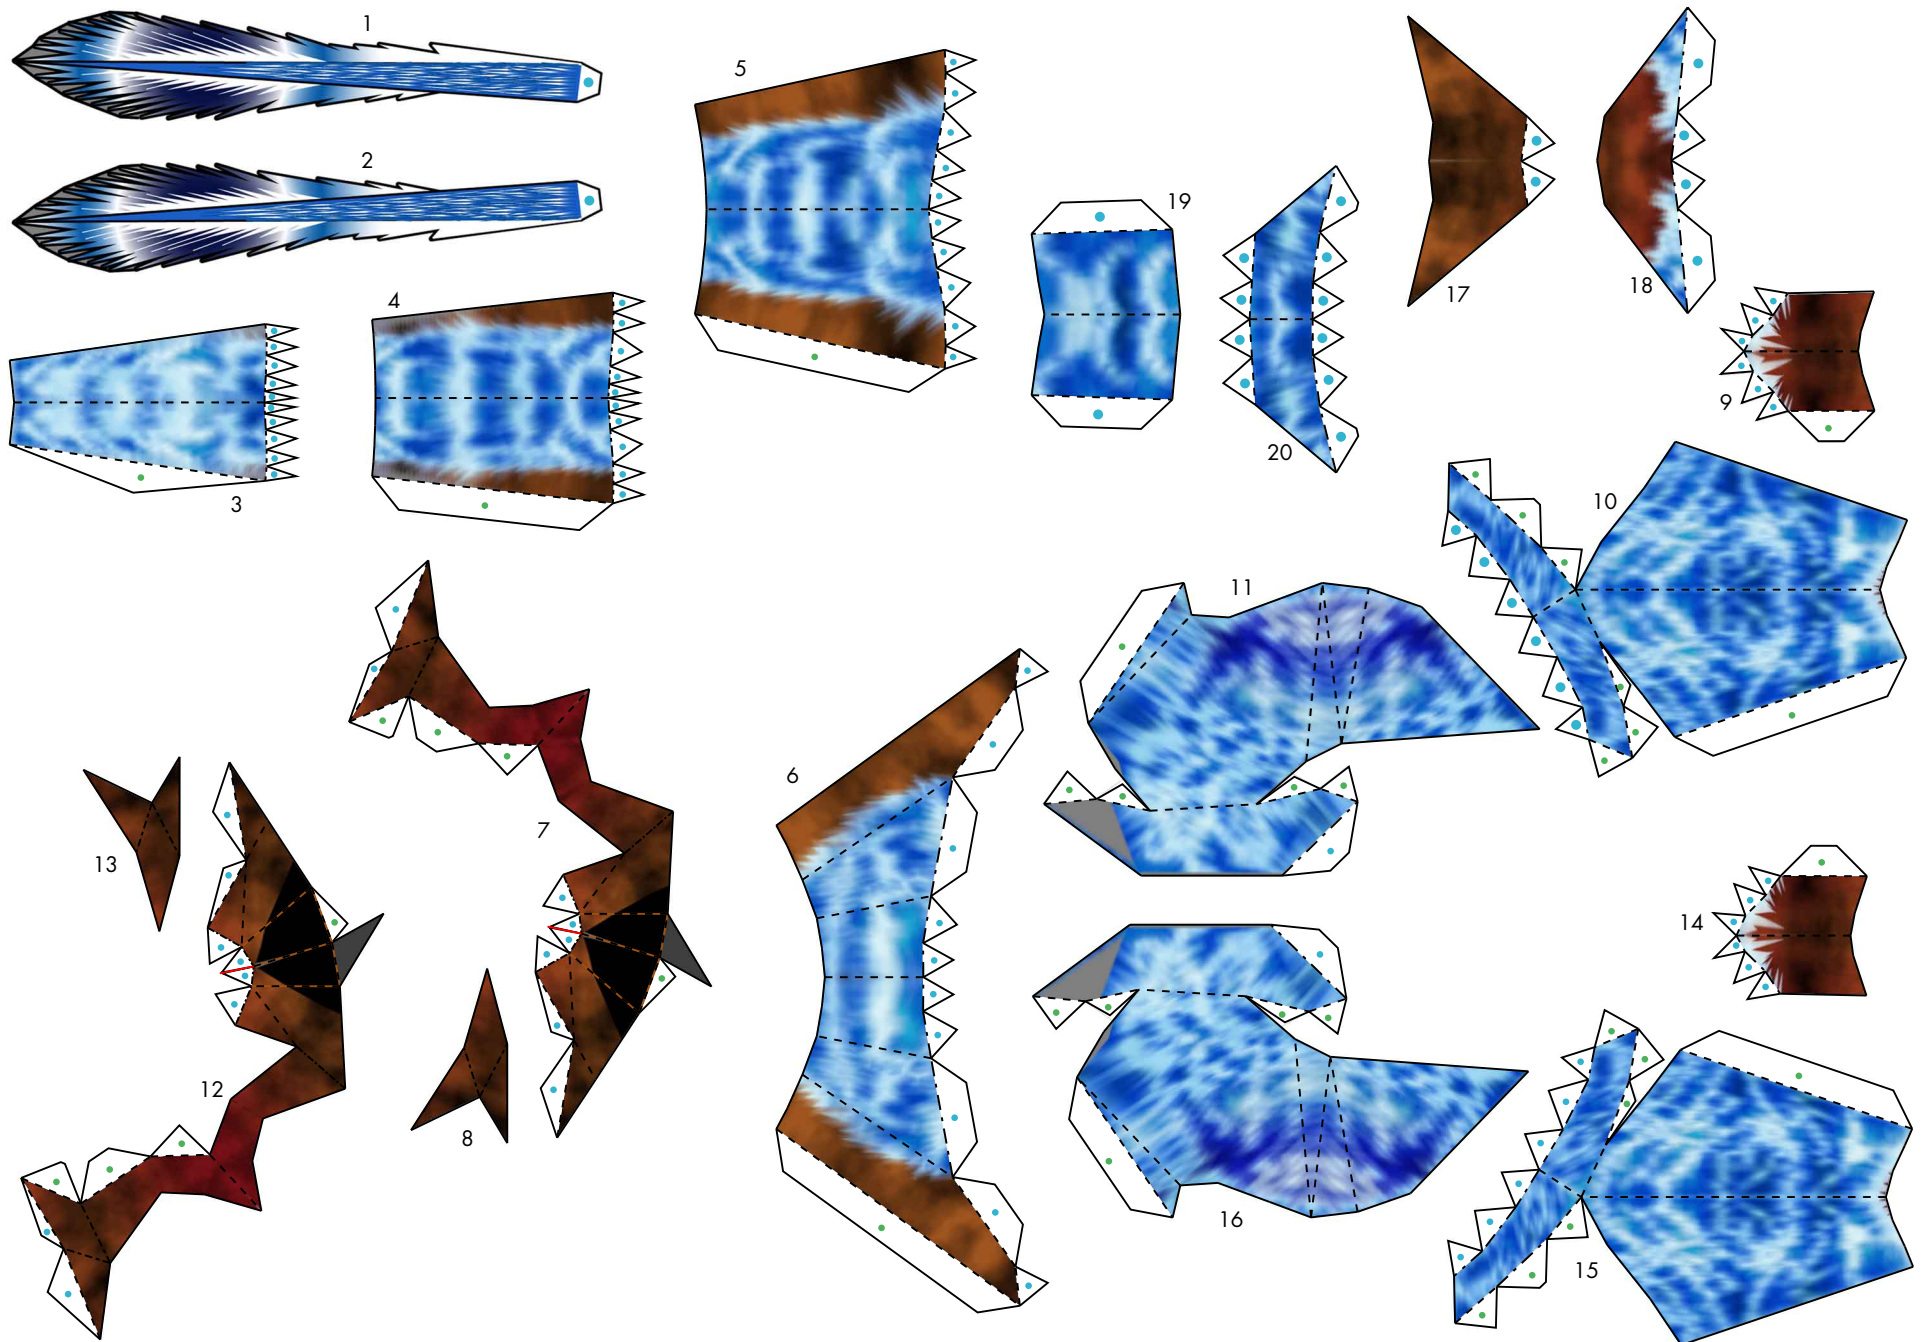

* This model was designed for Papercraft and may differ from the original in some respects.

■ Parts list (pattern) : Three US letter sheets (No. 1 to No. 3)

■ No. of Parts : 36

* Build the model by carefully reading the Assembly Instructions, in the parts sheet page order.
