

View of completed model

Total length : approx. 7 - 9 m ; weight : approx. 3 t ;
taxonomy : Order Ornithischia, suborder Thyreophora (Stegosauridae)
Period : late Jurassic period (150 million years ago) ; habitat : the Americas

Stegosaurus

Editor :  THE NATIONAL SCIENCE MUSEUM
国立科学博物館

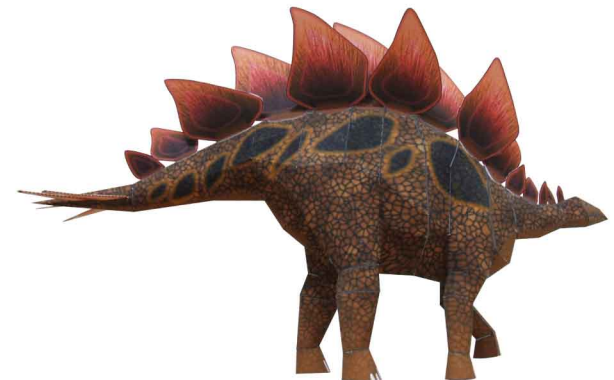

The *Stegosaurus* is an herbivorous dinosaur that lived in North America in the late Jurassic period of the Mesozoic era. Ranging up to approximately 7 - 9 meters in length, the *Stegosaurus* most outstanding characteristic is the large bony plates running in a line down its back to its tail, alternating from side to side. Blood vessels developed in the surfaces and insides of these plates, perhaps to radiate heat and cool the body. With its small head, this dinosaur's brain was only about as big as two or three ping-pong balls. The spines at the tip of its tail appear to have been used as weapons to protect the *Stegosaurus* against enemies.

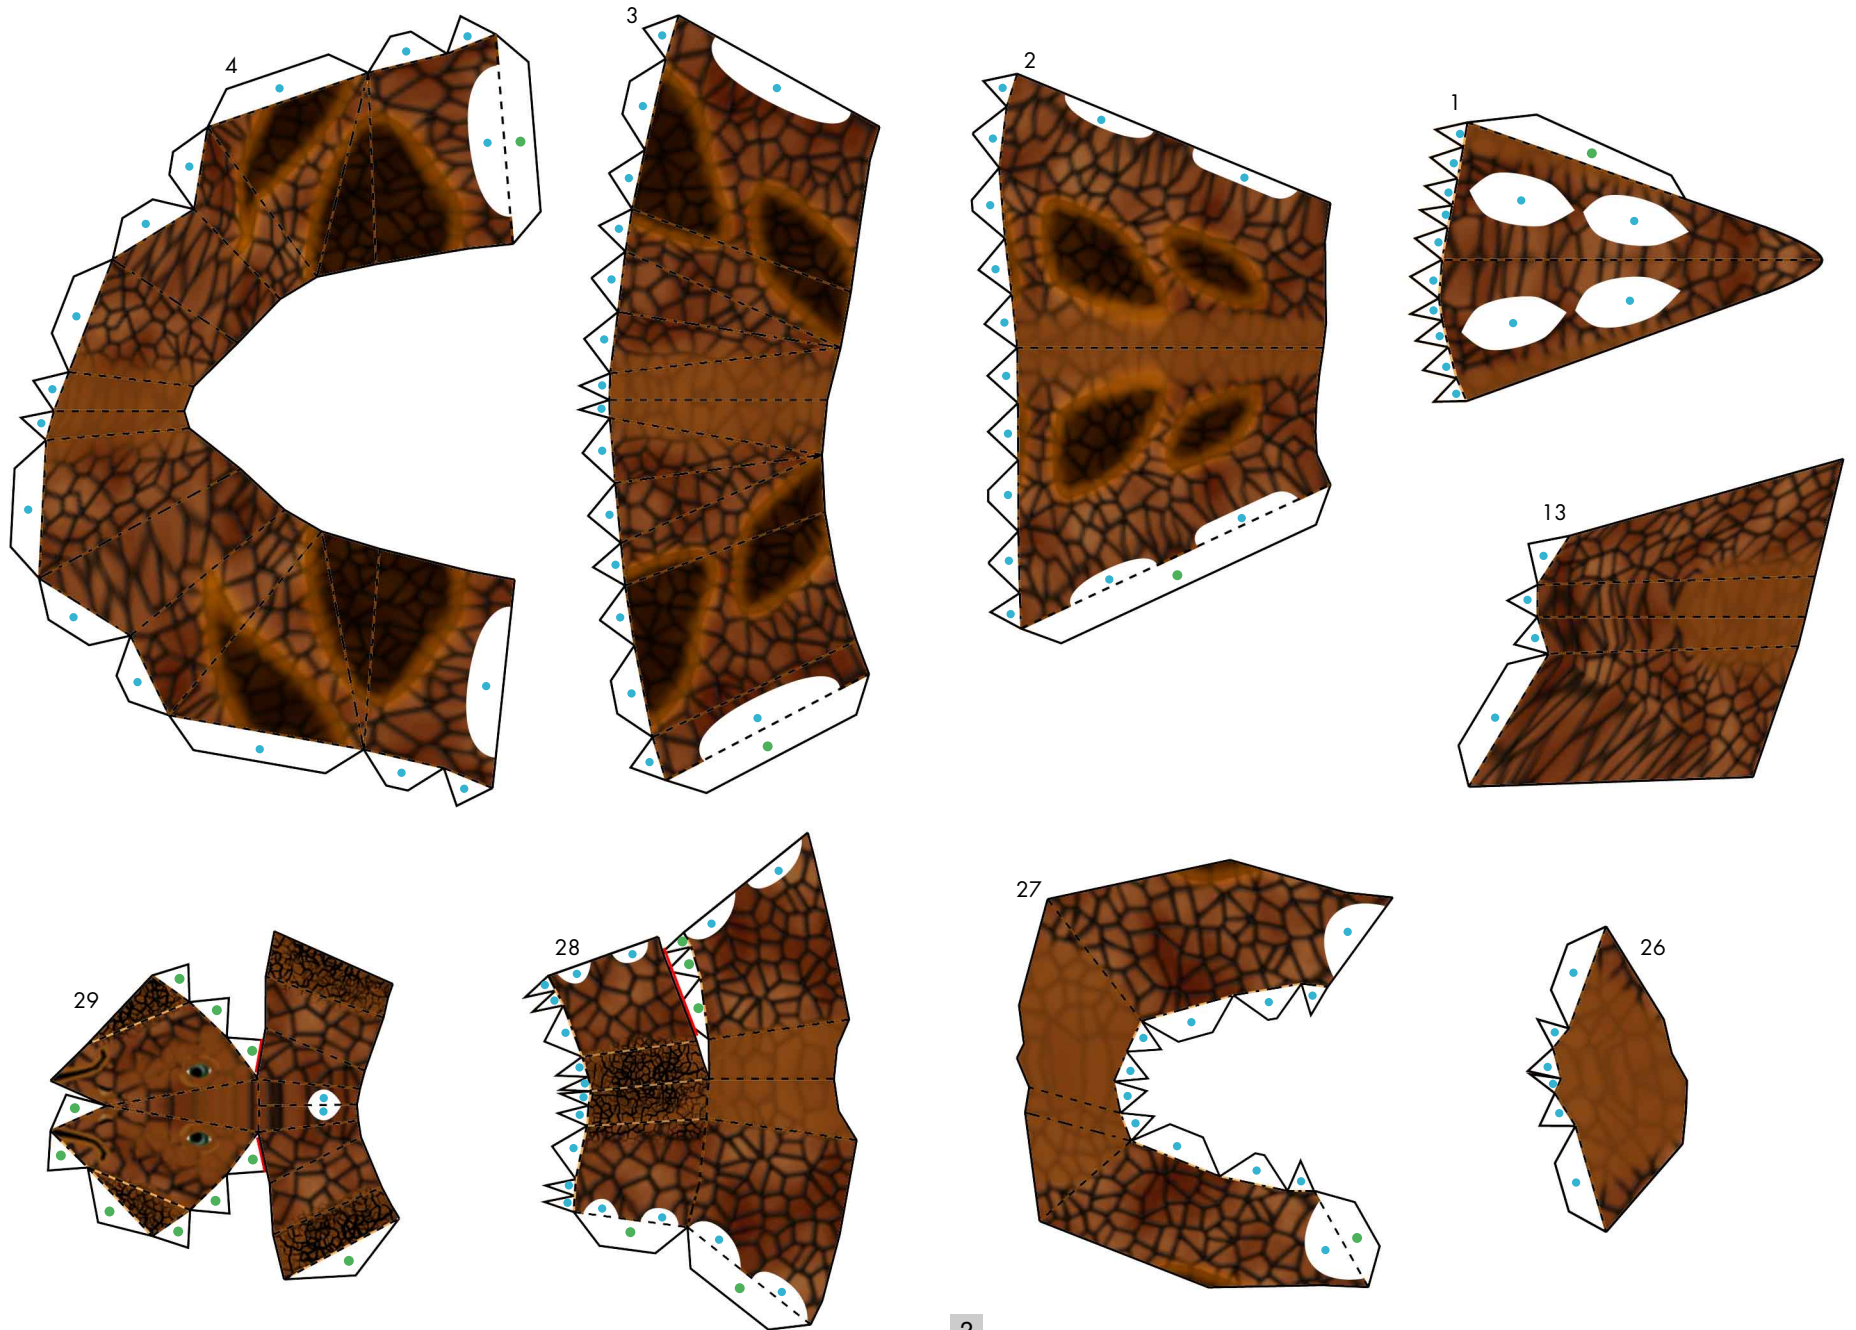

* This model was designed for Papercraft and may differ from the original in some respects.

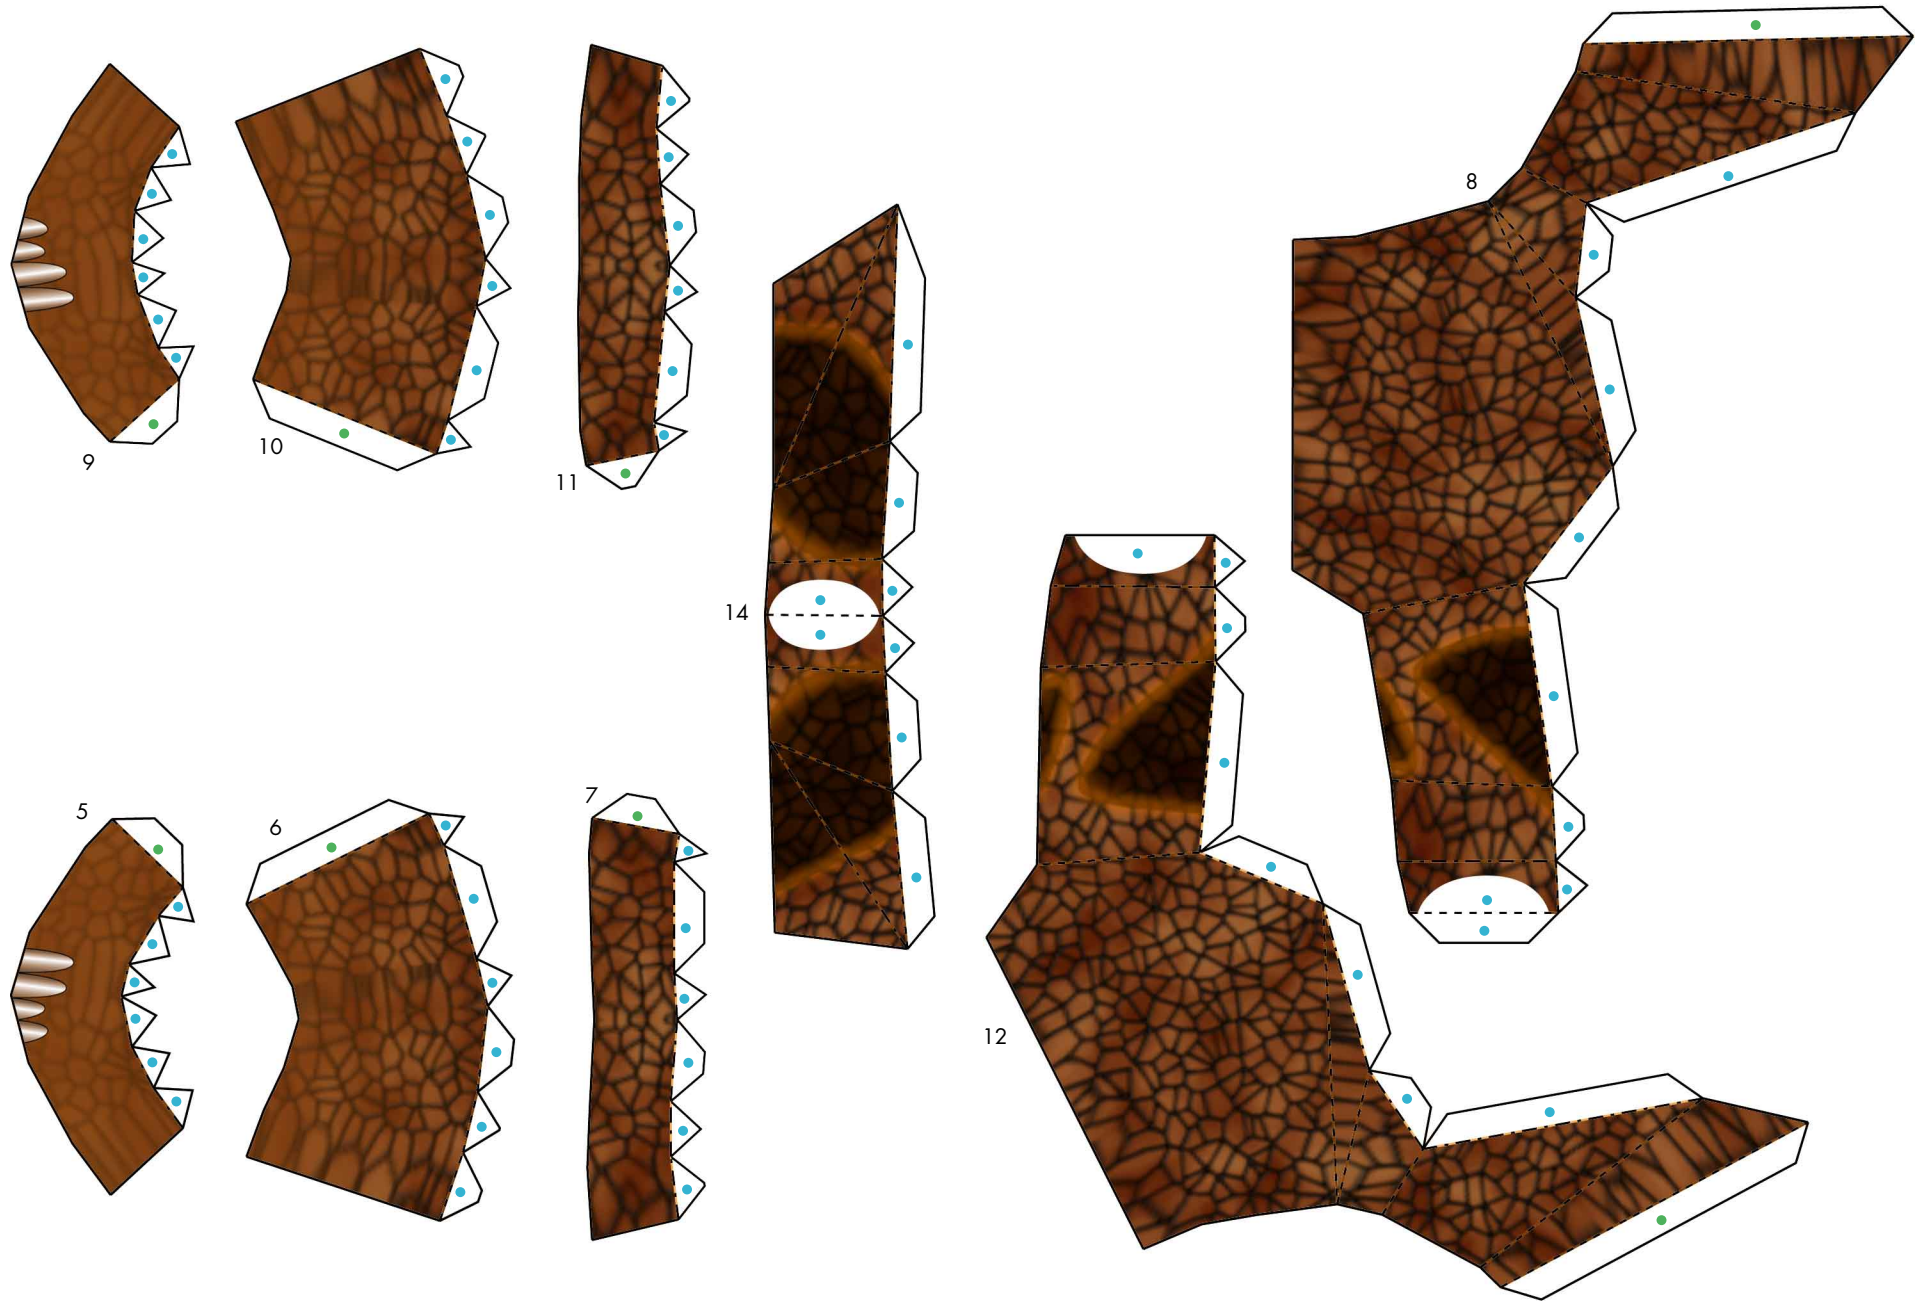

■ Parts list (pattern) : Six US letter sheets (No. 1 to No. 6)

■ No. of Parts : 64

* Build the model by carefully reading the Assembly Instructions, in the parts sheet page order.
