

Hey! Glad you downloaded Blaze!! Years ago, a guy named Corbak deleted his version on his blog. :( But I decided to make my own. This model is from the model resource website.

There is a password, but I highly recommend you open this with Pepakura VIEWER. It's a lot

harder doing it in design. Also, you're probably wondering," What's these fire planes doing here??"

Well, when I imported the model, they came. And I already unfolded it before I found out that I could take them away...

But I don't want to stop you from having fun. Blaze is awesome. YOU'RE awesome! And I know you can make her! So have fun!!

Password— Note- ( I recommend you use the pepakura viewer)
