

SHEIK

By Xenon

<http://xenonray.deviantart.com>

Sheik is a fast and agile warrior who uses a combination of daggers and the Goddess' Harp to cut her way through enemies. Unlike the other warriors, she can harness the power of all the different elements, depending on the combo used. Once the power of a specific element is acquired, she can use her harp to unleash a special move or attack. Each elemental ability has different properties, making her a very versatile character.

Notes:

This model is meant to be built in the smooth method.

This is where you ignore most fold lines and only score the tab lines. Some angular parts should still be built with scored folds so I'll point these out in the instructions. But exactly how much you smooth build also depends on your preferences, skill and card thickness.

However with smooth building, you should pre-shape the pieces first by gently bending them in the direction needed. The PDO shows valley folds as dot-dashed lines (double-dashed if white highlights are on), and mountain folds as just dashed.

You must use thick paper or thin card for this model. Printer paper will not be strong enough! I used 160gsm for all of it with good results. You could probably build it with a minimum of 120gsm. To get a stable pose it is highly recommended to add something to weigh the feet down, particularly inside the toe of the right foot.

The instructions and part numbers are only a guide and reflect my rough order of building. But I really encourage you to use the PDO file (a must for a model of this detail) and think beyond this. My methods might not be ideal for you!

Part Letter List:

A: 1-60 Arms and Hands

B: 1-9 Body

E: 1-95 Extras

H: 1-69 Head

L: 1-47 Legs

Mountain Fold

Valley Fold

Although I recommend the smooth method, you can choose to score the fold lines if you want. Dashed lines are mountain folds, double-dashed or dot-dashed are valley folds. Even if you are building smoothly, these are a handy reference to know how to shape pieces.
