Start at the bottom of the body and close at the top. Glue the mouth before closing. I suggest leaving a couple of tabs unglued til you can put the cap on it and see if it will stand, in case it doesn't, a coin should be enough.

I suggest you reinforce the connection between the body and the arms, just glue a bit of scrap paper inside where they connect.

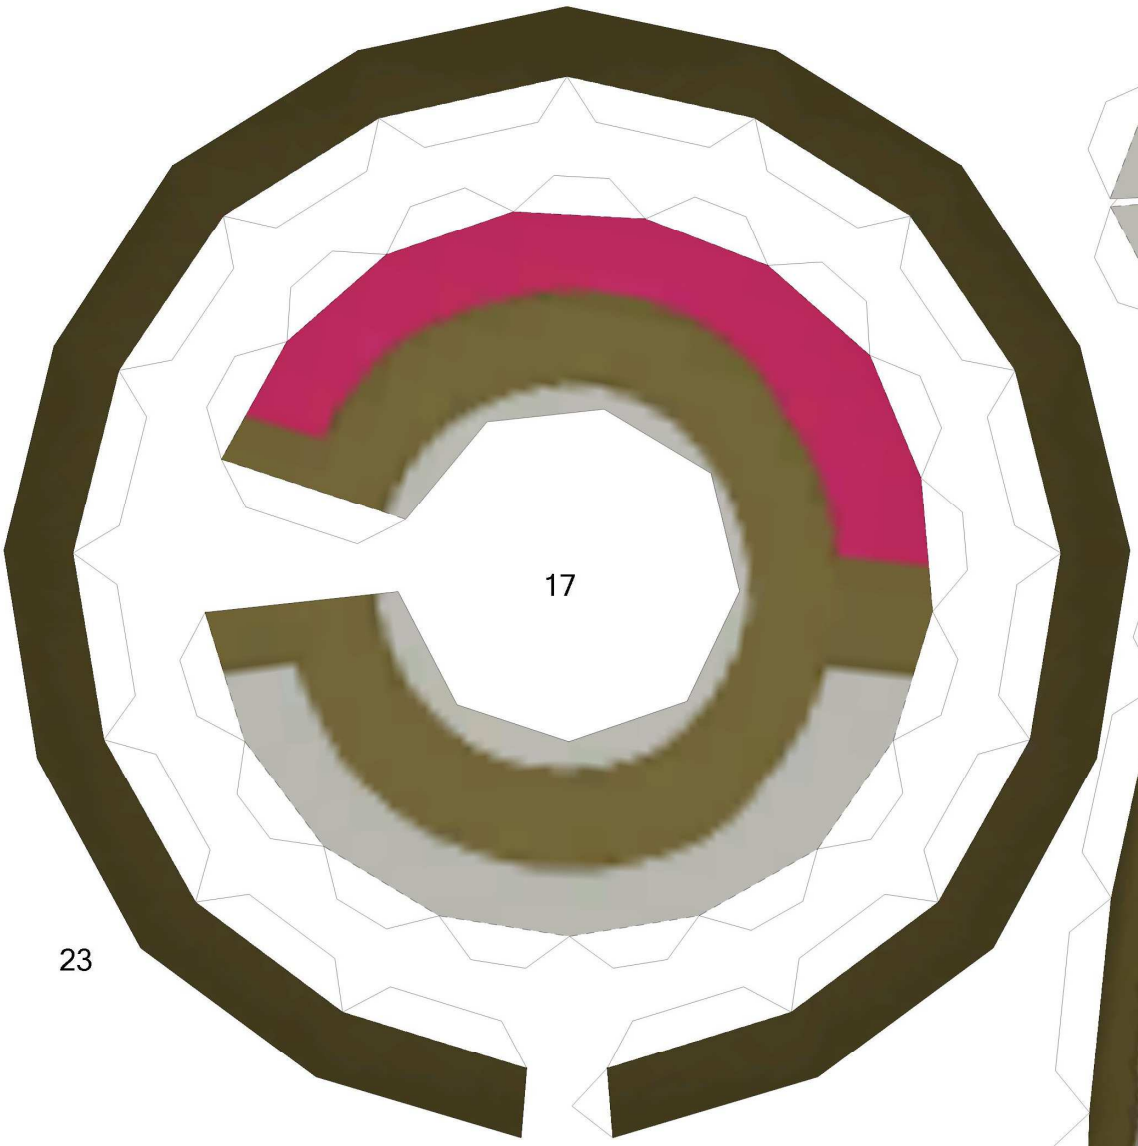

Use a pencil to round the pieces, specially of the body and the top.

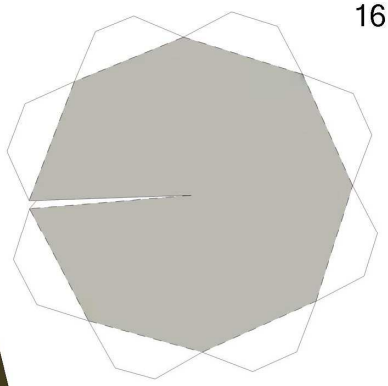

Build the hands starting at the front, closing at the back.

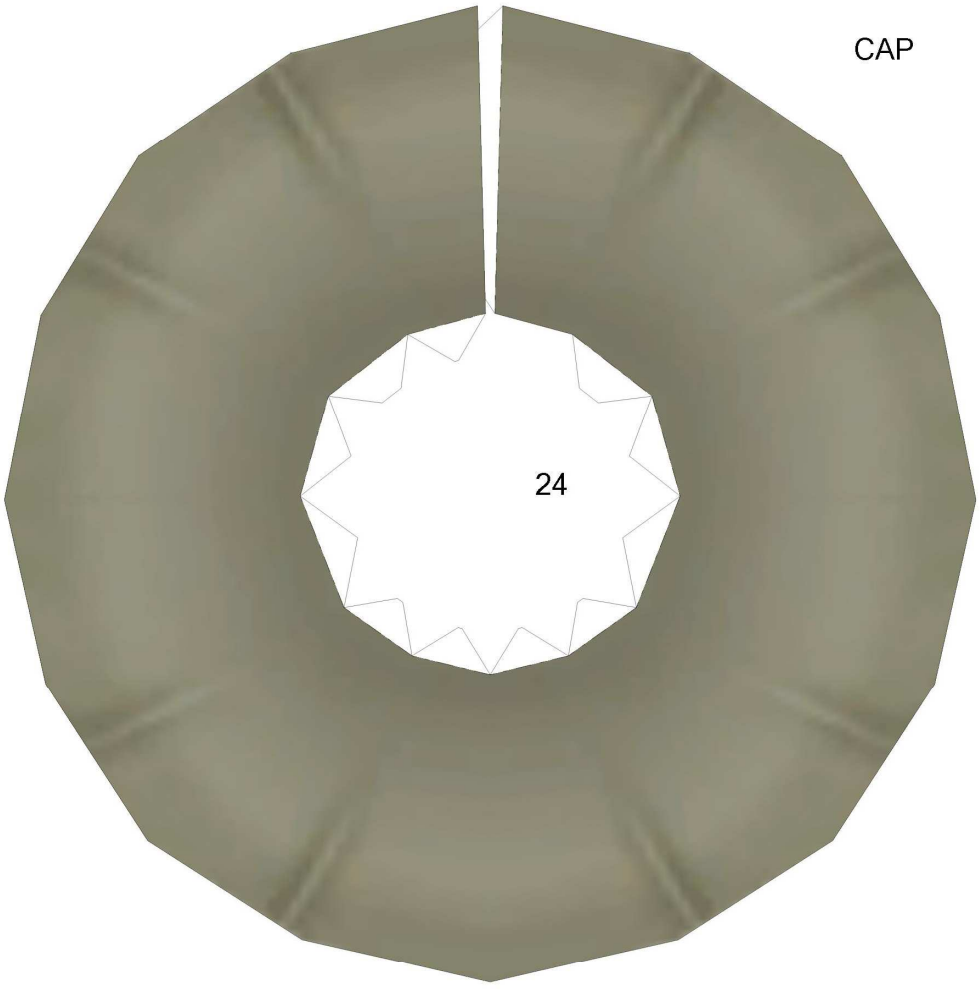

Glue the hands as soon as the body is closed.

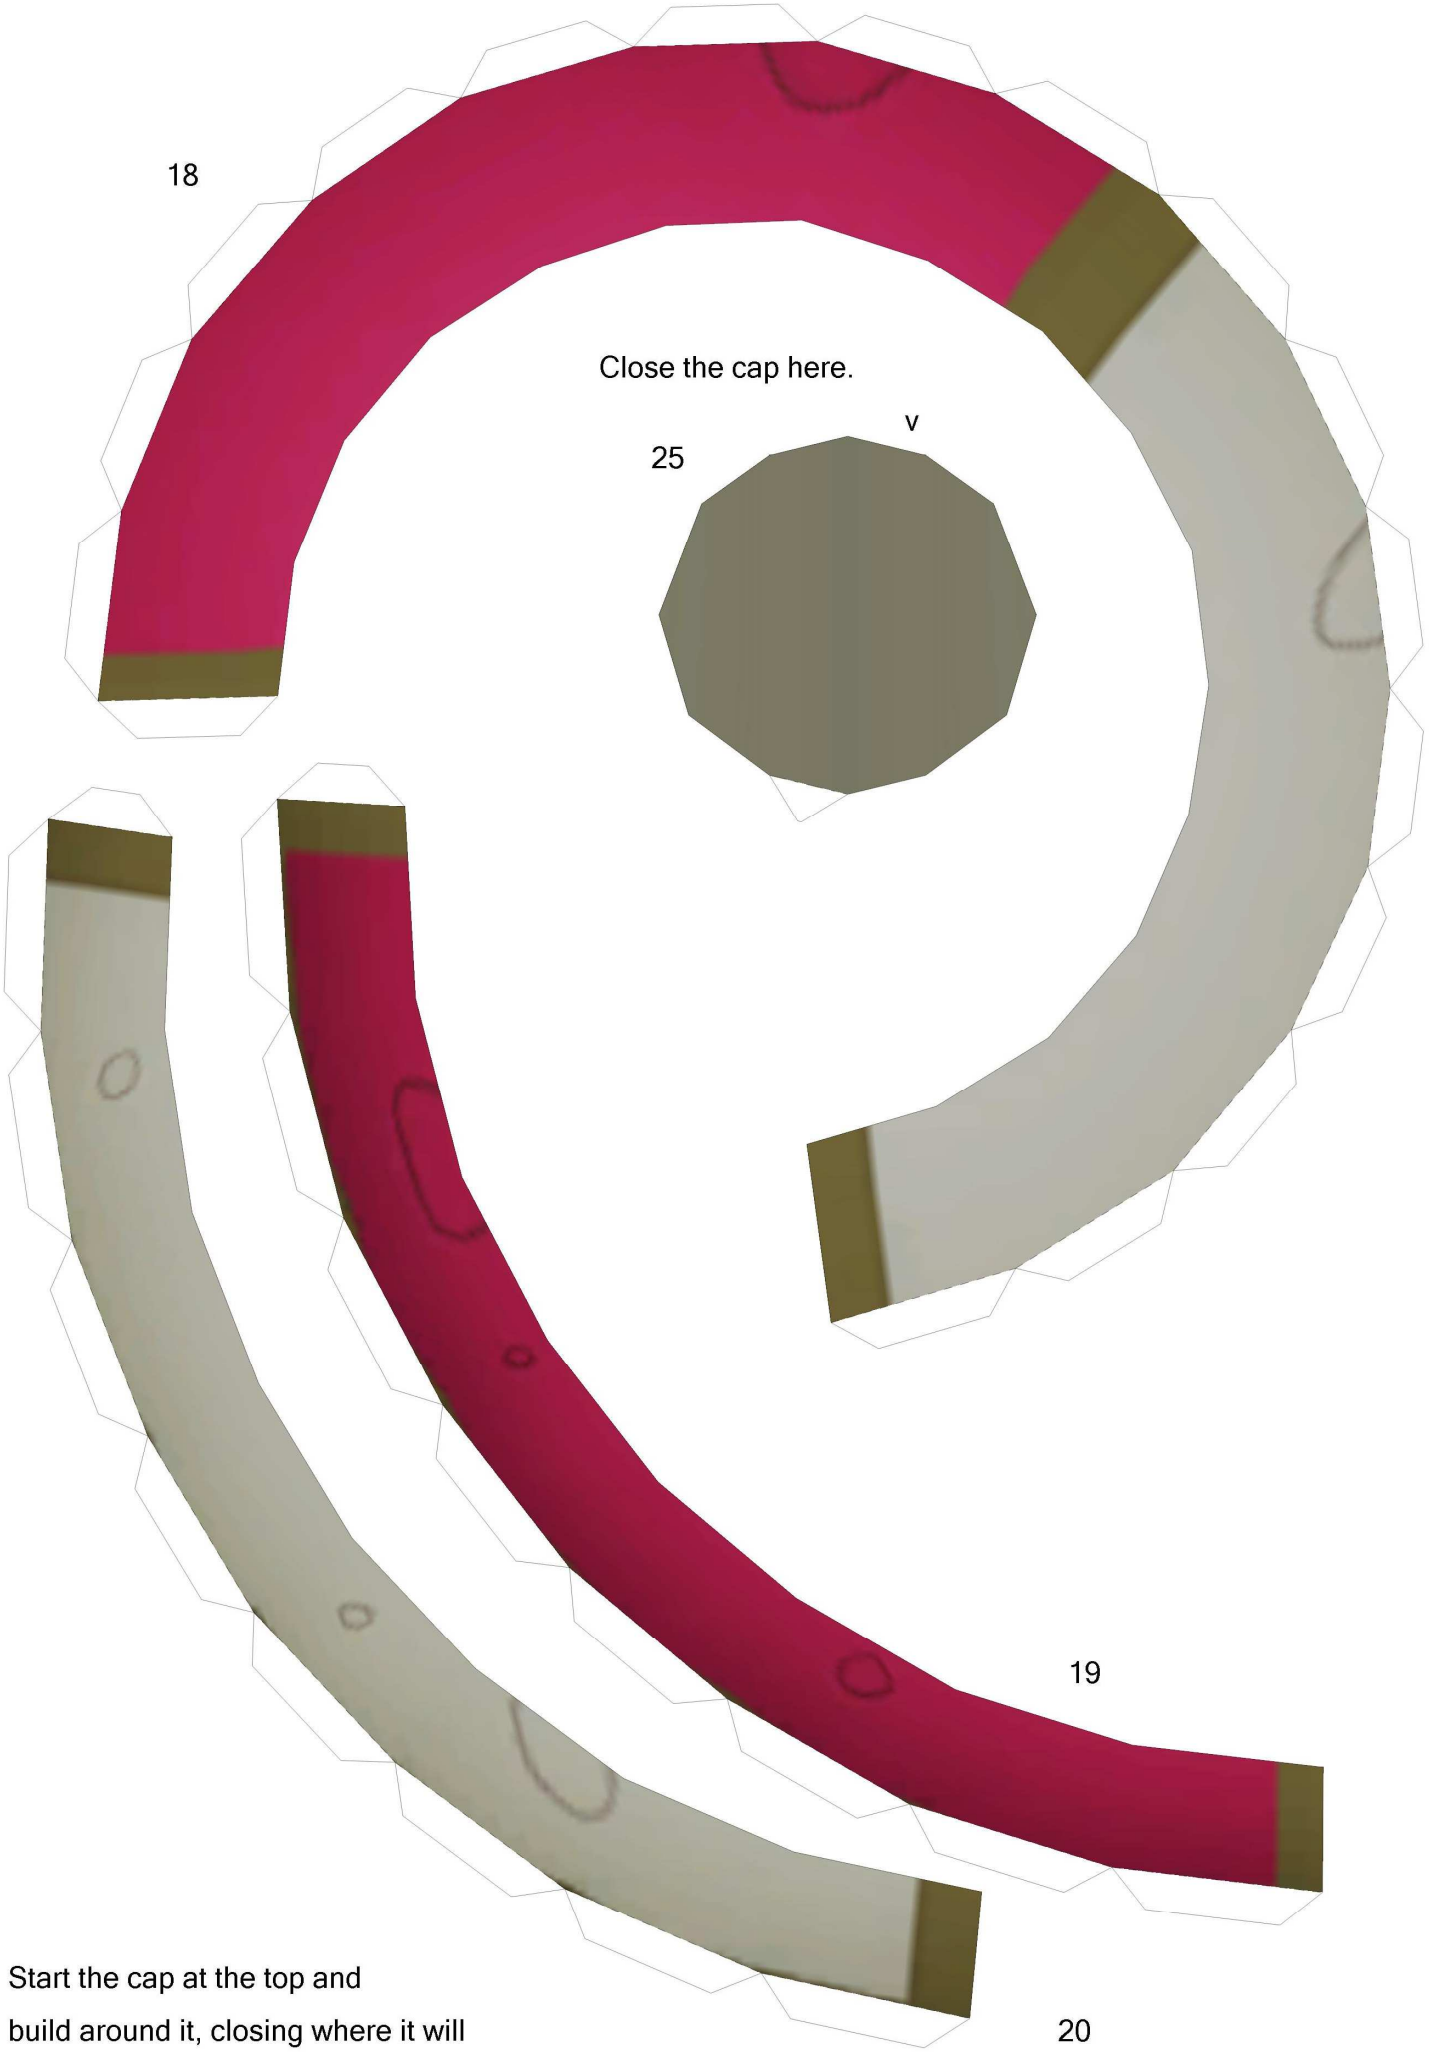

CAP

Start the cap at the top and build around it, closing where it will connect with the body. You'll need tweezers to connect pieces 24 and 25.
