

AERITH INSTRUCTIONS

www.thelastinlineagain.blogspot.com

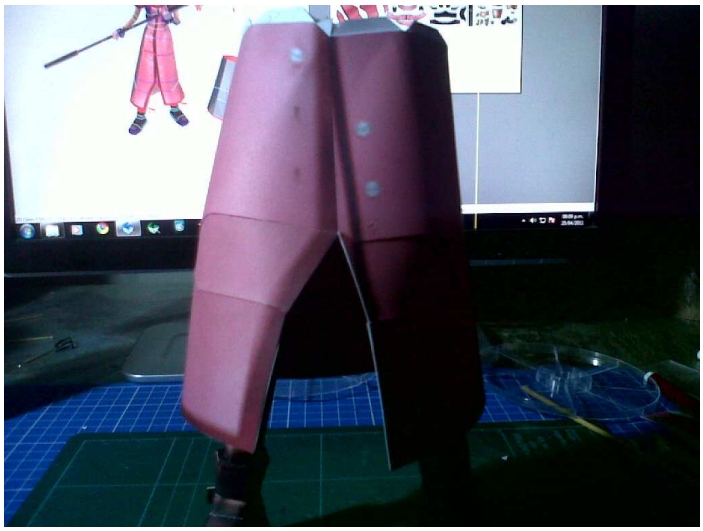

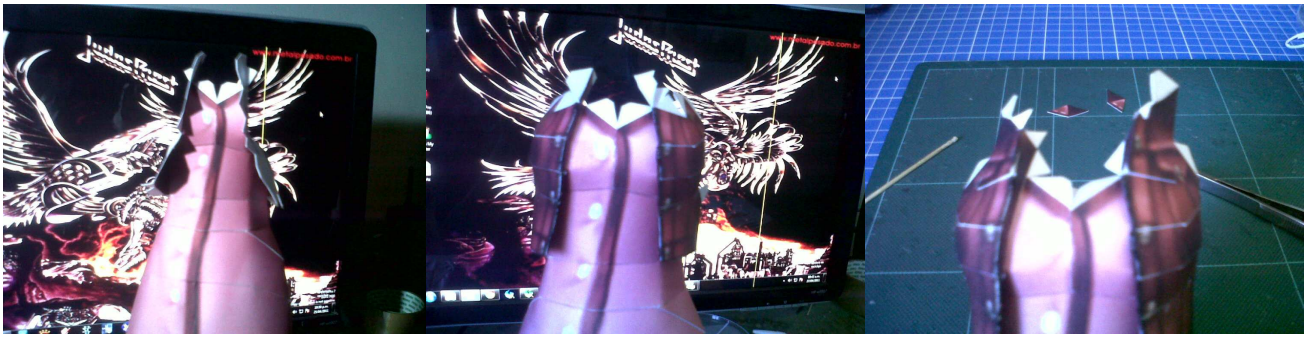

Here we are with this new model, Aerith, first build the right foot (pieces 1-7) then take piece 8 and glue on the red dot, attach piece 9, now glue pieces 10-14 to finish de right leg.

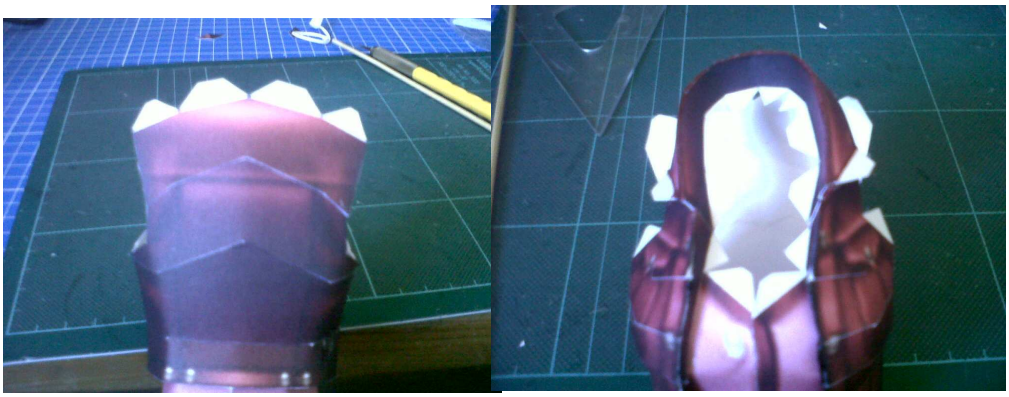

Do the same for the left leg (11-28), then glue pieces 29,30 and attach both legs, this is a little bit difficult, now attach pieces 31-35

Attach pieces 36-40 to end the dress.

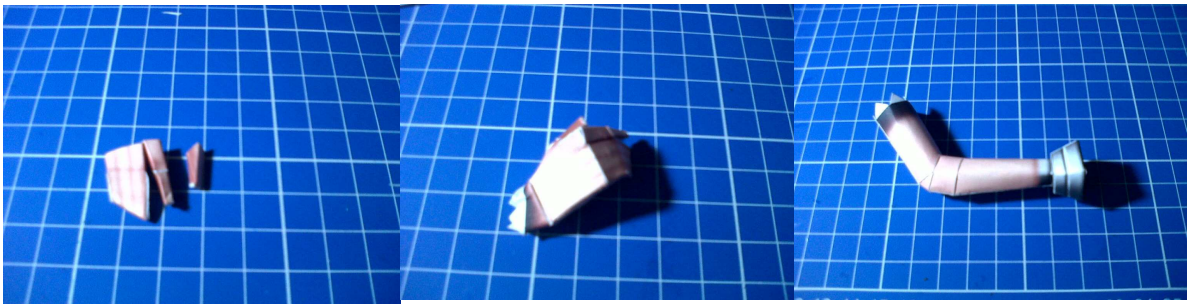

Place pieces 41-49, piece 49 is thin so take care, then glue pieces 50-57 and attach 58-63.

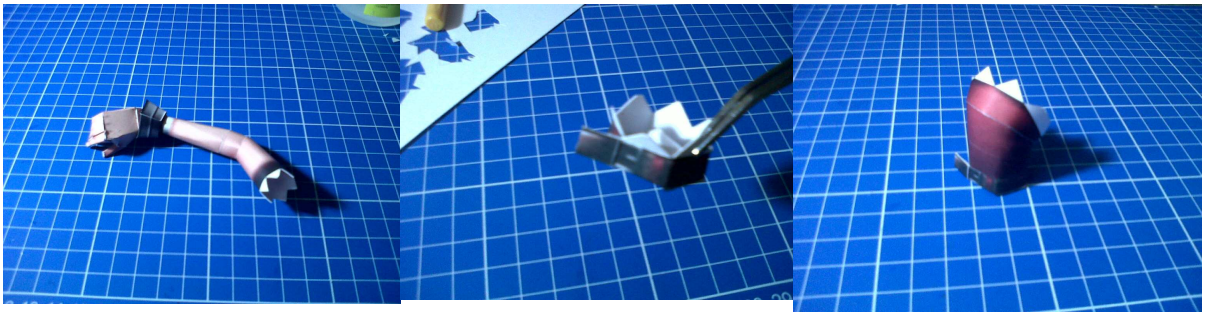

Attach pieces 64 and 65 then pieces 66 and 67

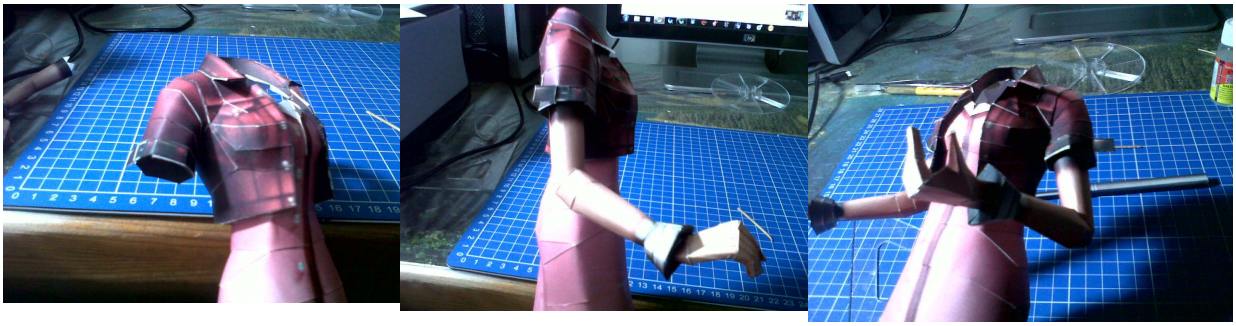

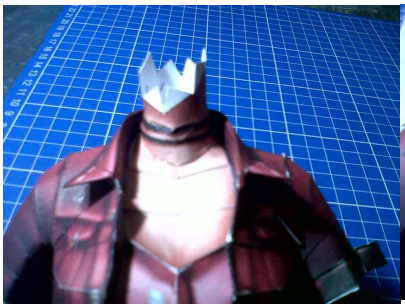

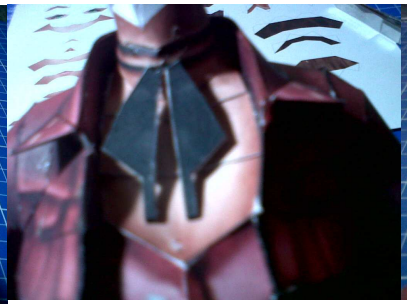

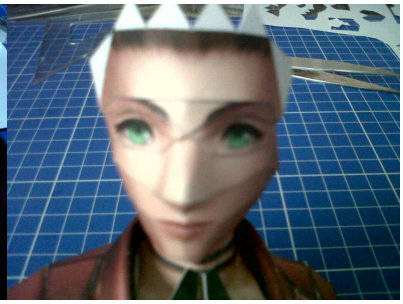

The hands are small but not too difficult, first construct the fingers (68-72) then finish the hand (73 and 74) now build the arm and the bracelet (75-79)

Joint the hand and the arm. Build piece 80 and place 81 on the red point, construct pieces 82-84.

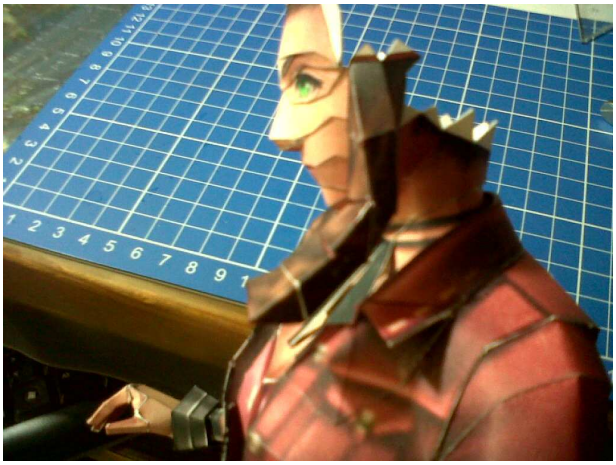

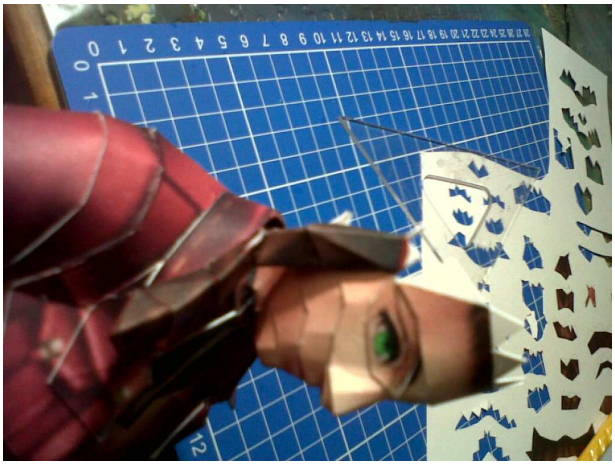

Attach to the body and glue the arm. Do the same for the left arm.

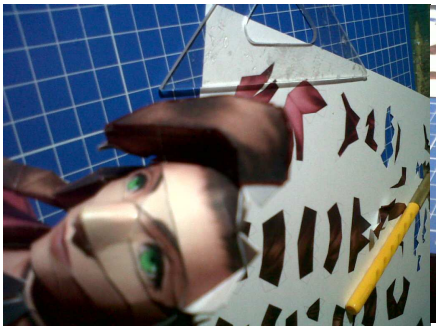

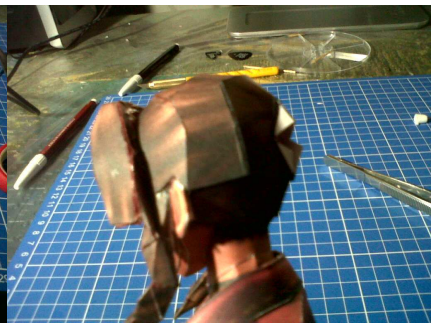

Lets start with the most difficult part of the model, first the neck (104-109) now place the ribbon (110, 111), then the cute face (112-125)

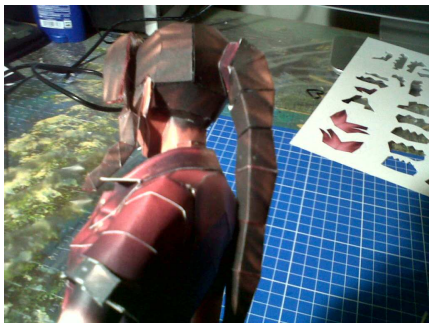

Continue with the hair, first build pieces (126-130) and (131-135) and attach them on the head, and place the ears (136-137)

This part is difficult so check the PDO file and fold the pieces like the PDO, build pieces (138-143) and (144-148) and place them on the forehead then close the head with pieces (149-154).

Glue piece 155, then build (156-165) and attach to the head, take pieces (166-168) to build the ribbon and place it on the head, now glue all pieces (169-181) don´t forget to trim the excess.

Build pieces 182, 183 and 184, as you can see they are really easy and then glue them together.

Place the pole and you have finished this beautiful model.
Thanks for build my models (ACE)
