Do not glue any of these parts to the weapon racks. They are designed to be removable!

COMPLETED INNER CONTAINER

FOLD UP INNER WALLS AND SECURE WITH OUTER SLEEVE

01

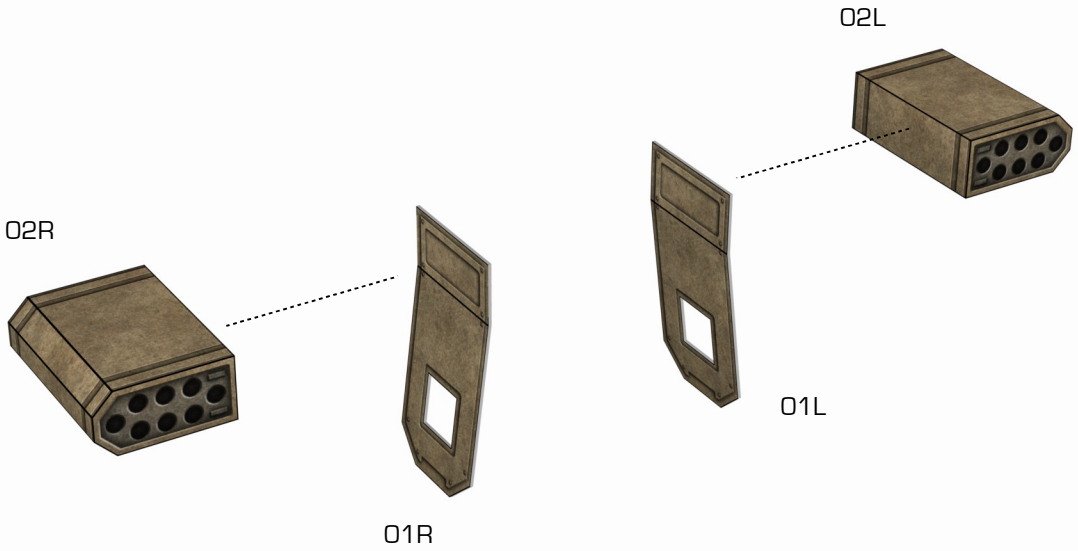

Do not glue the outer sleeve into place. It is designed to be removable!

COMPLETED CONTAINER

SHOULDER MOUNTED ROCKET PODS

COMMON PARTS

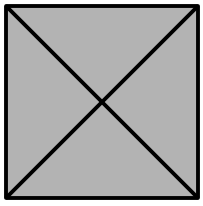

The rocket pods are designed to slide onto the standard shoulder hardpoint pegs. Once installed, the combined shoulder/rocket pod assemblies slot into the torso block normally. Enough parts are provided on one page to build 4 rocket pods, which is enough to equip up to 4 Vulcans with a single rocket pod each, or to equip 2 Vulcans with matching pairs of rocket pods.

UNIQUE MARKINGS

While the instructions show the same container, each ASC set actually comes with an unique container. The serial number markings on each container are different, so you're not buying the same thing over and over again. Additionally, while some containers have slightly different interior geometry to accommodate the items they contain, the assembly process is identical for each of them.

HARDPOINT PEG/INTERFACE SYSTEM

The options included in this set are designed to slot into the weapon racks. When you see an interface area on the weapon racks that resembles the image to the right, cut through the X inside the square. This forms 4 triangular tabs, which should be folded inwards a little.

The hardpoint pegs on the various options are simply pushed through the interface areas. This allows options to be removed and changed at will.
