TACTICAL HIGH ENERGY WEAPON ARMS

COMMON PARTS

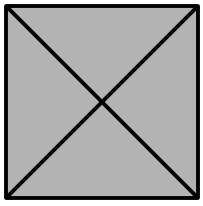

The shoulders assemble identically to the standard shoulders included with the Ares Vulcan base model. To save paper and ink by not printing out wasted parts, these arm parts have been duplicated on the same page as the THEW parts. Everything you need to equip a Vulcan with a pair of THEW arms is on a single page.

UNIQUE MARKINGS

While the instructions show the same container, each ASC set actually comes with an unique container. The serial number markings on each container are different, so you're not buying the same thing over and over again. Additionally, while some containers have slightly different interior geometry to accommodate the items they contain, the assembly process is identical for each of them.

HARDPOINT PEG/INTERFACE SYSTEM

The options included in this set are designed to slot into the weapon racks. When you see an interface area on the weapon racks that resembles the image to the right, cut through the X inside the square. This forms 4 triangular tabs, which should be folded inwards a little.

The hardpoint pegs on the various options are simply pushed through the interface areas. This allows options to be removed and changed at will.
