PARTS MANIFEST

DAMAGED CRYOPODS

4X1 LOCKERS

The cryostasis pod systems in this set can be built as straight-row banks of cryopods, or as groups of X-shaped pod clusters on 4x4-inch floor plates.

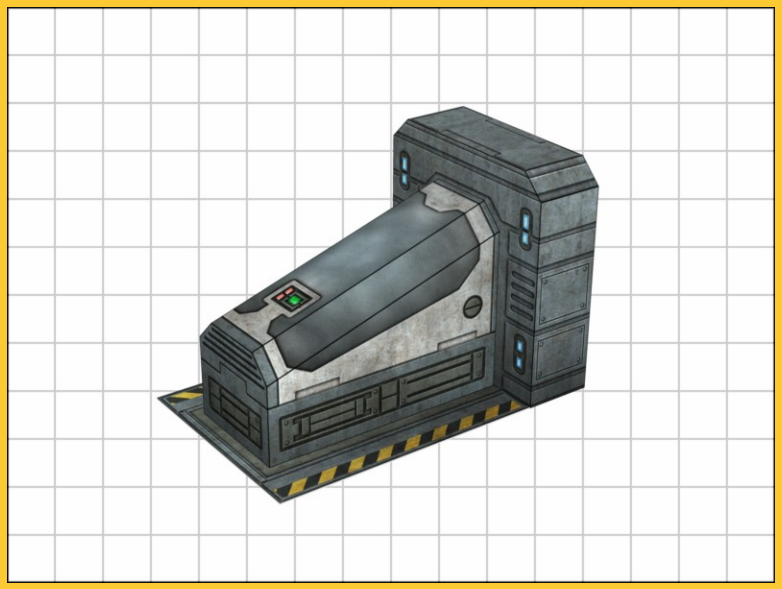

The cryopods come in both intact and damaged versions. The damaged cryopods come in 4 variations: one with blood-spattered glass, two with blood-spattered glass and spiderwebbed impact cracks, and a blood-spattered cryopod with a gaping hole in it. These can be used to represent the point of origin for an alien infestation.

A monitoring console and medical lockers are included as room objectives or interactive room elements. The 4x1 lockers are presumably where the hibernating occupants keep their clothing and shoes when in cold-sleep.

AMBIENT ELEMENTS

POD BANK UNITS

The pod bank unit is a one-piece cylindrical volume that folds up into the shape shown to the left. Start by building the cylindrical portion, then fold up the floor plate 90 degrees.

The pod itself is a truncated cone that folds up into the shape shown to the left. Glue it into place as pictured.

POD CLUSTER

1. Cut out the pod cluster base, leaving some margin around the part. Glue it to some scrap cardstock to double its thickness, then trim out the part.

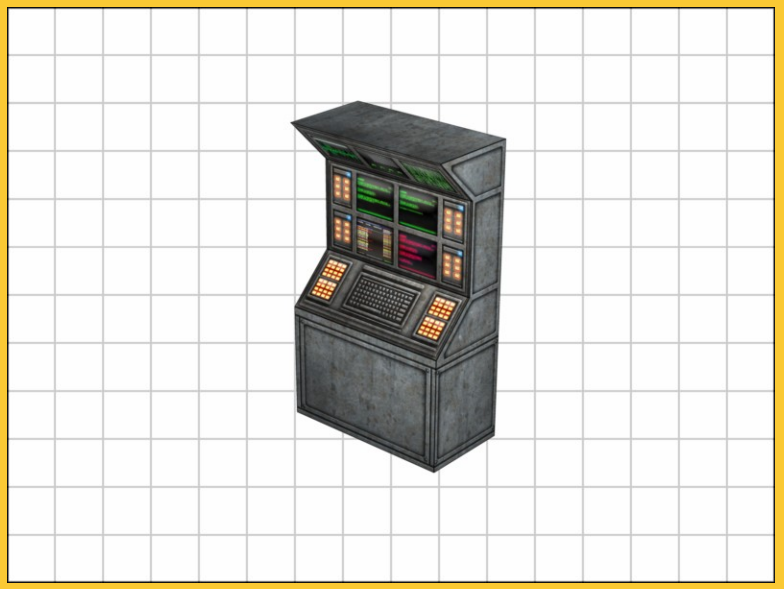

2. Glue the pod cluster unit to the center of the pod cluster base as shown to the left.

POD CLUSTER, CONTINUED

3. Glue 4 cryopods to the assembly as shown to the left.

MONITORING CONSOLE

The monitoring console folds up into the shape shown to the left.

MEDICAL LOCKERS

The medical lockers are simple box shapes, and fold up as shown to the left.

LOCKERS

Identical to the above locker, except wider.
