

Druddigon

By Brandon

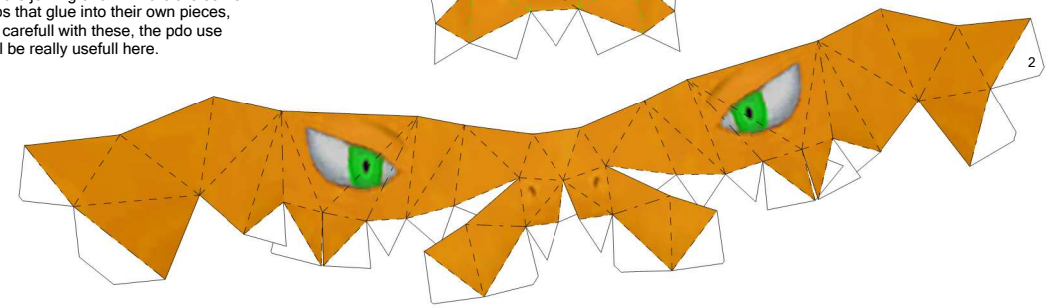

Build by LuIS

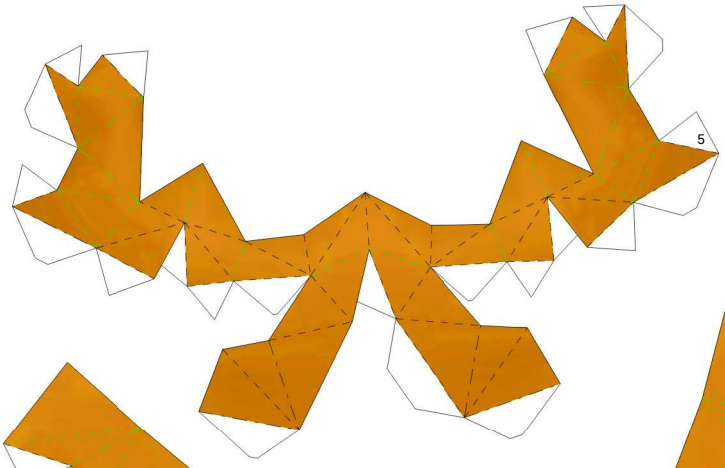

PaPerPokés
www.pokemonpapercraft.net

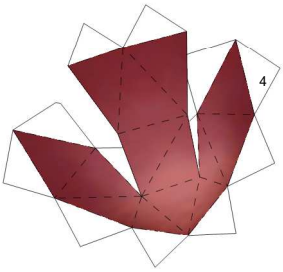

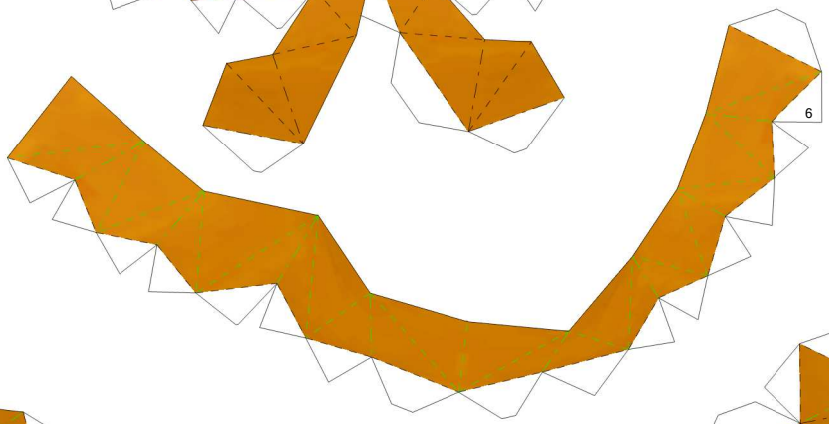

This model is built into two main parts: head and body. Start the head by the top and work down, closing at the bottom. Be extra carefull while building the mouth, fold the lines indicated and be patient, some parts may be harder to glue and this is the hardest part of the head. Join piece 3 and 4 together before joining 3 to 2. There are some tabs that glue into their own pieces, be carefull with these, the pdo use will be really usefull here.

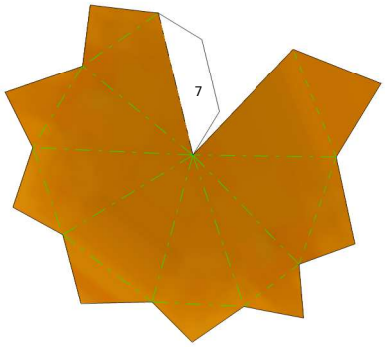

Suggested fold lines indicated in green.

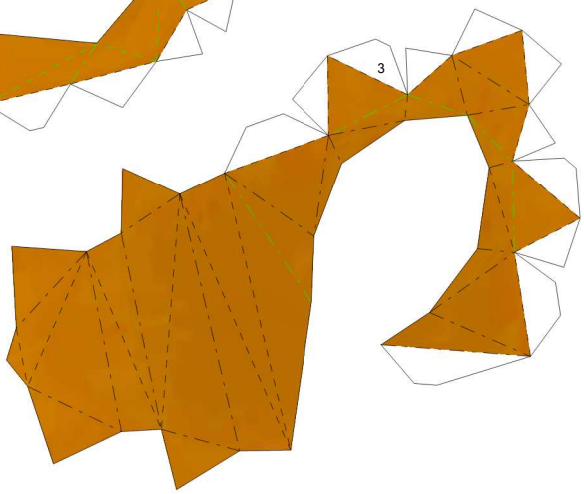

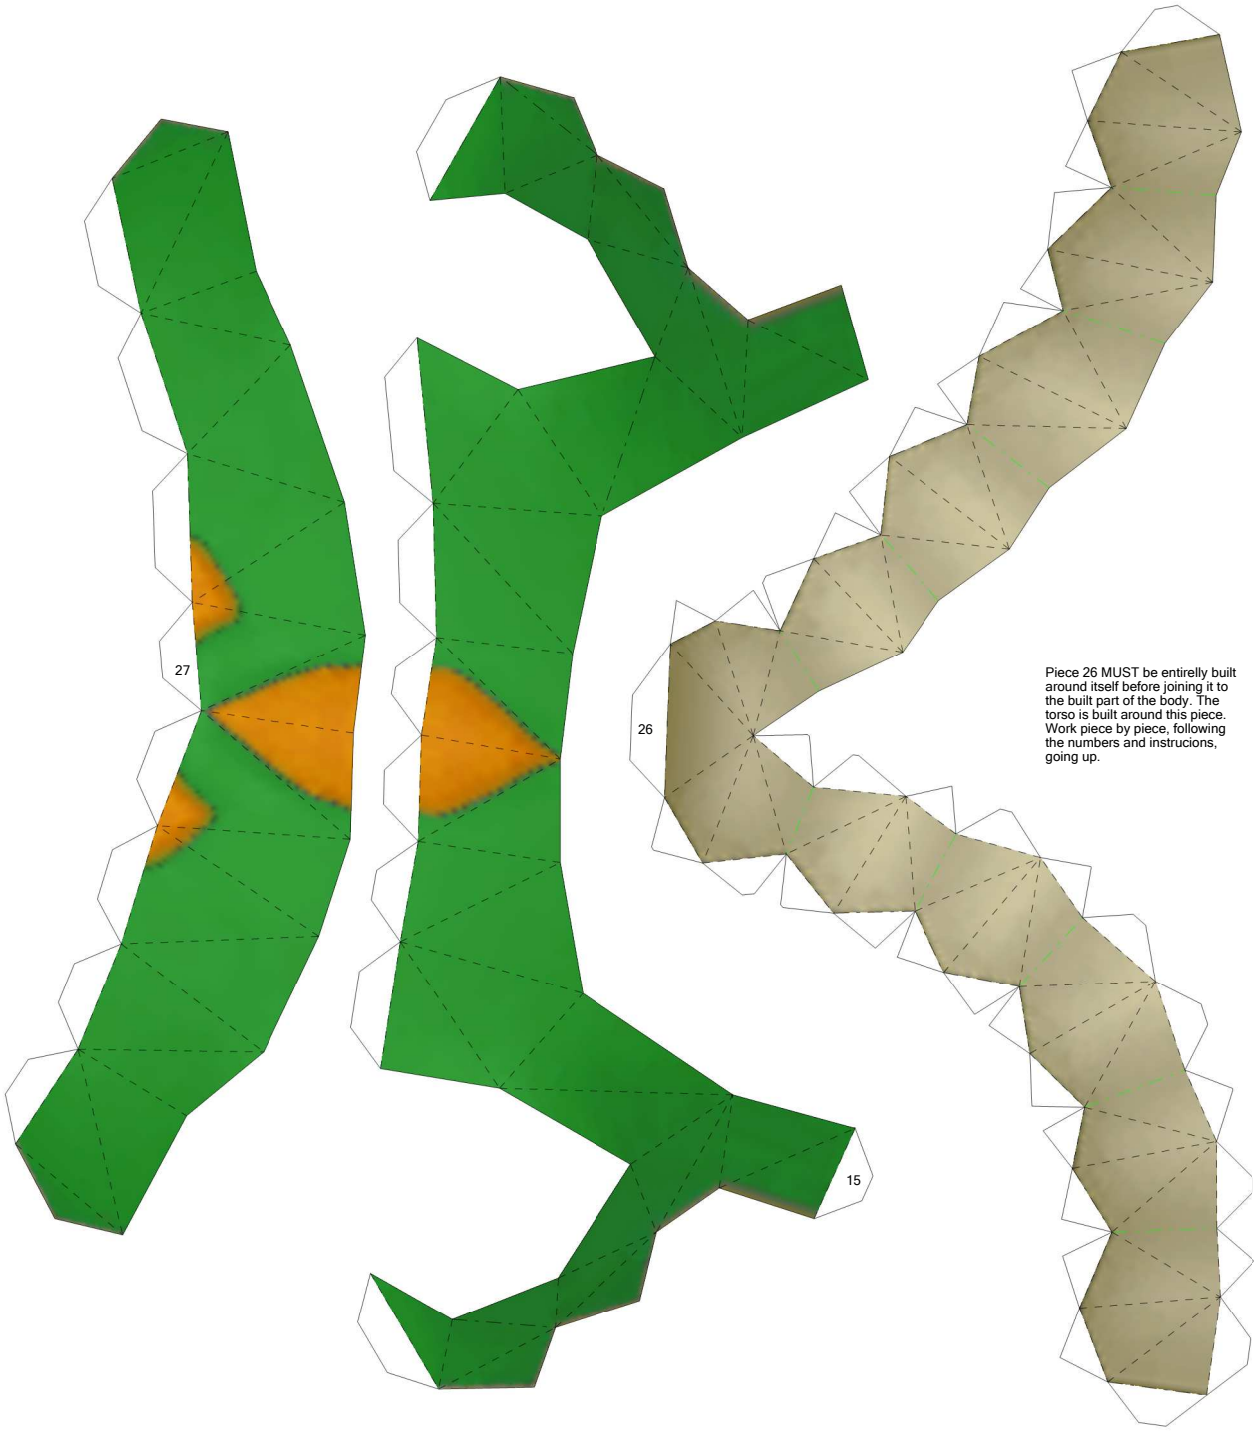

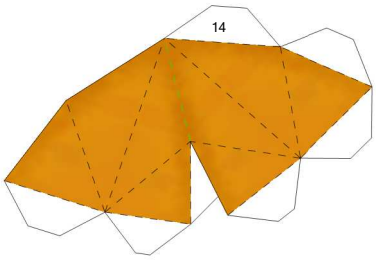

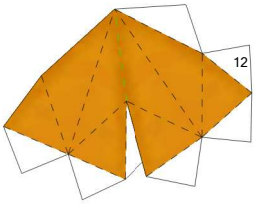

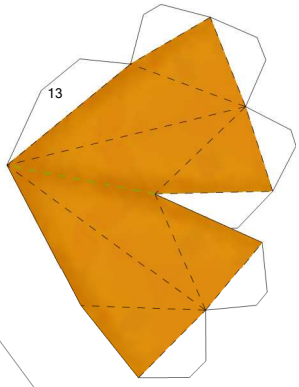

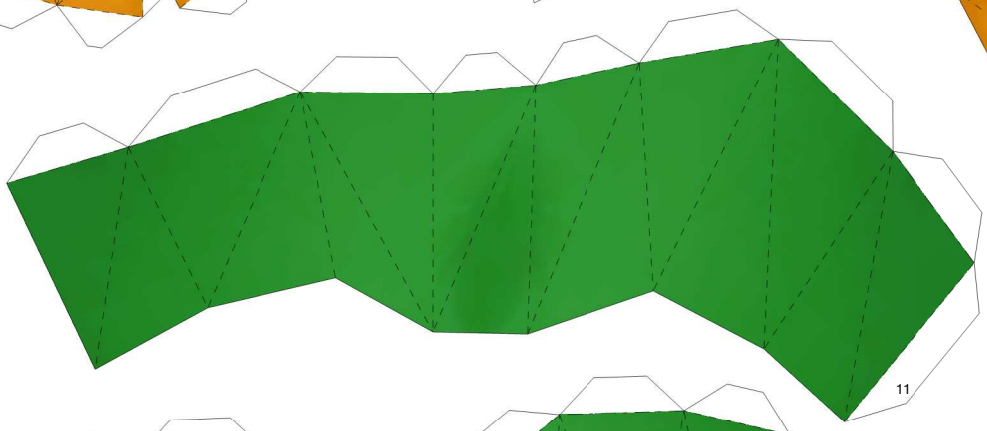

Piece 26 MUST be entirelly built around itself before joining it to the built part of the body. The torso is built around this piece. Work piece by piece, following the numbers and instrucions, going up.

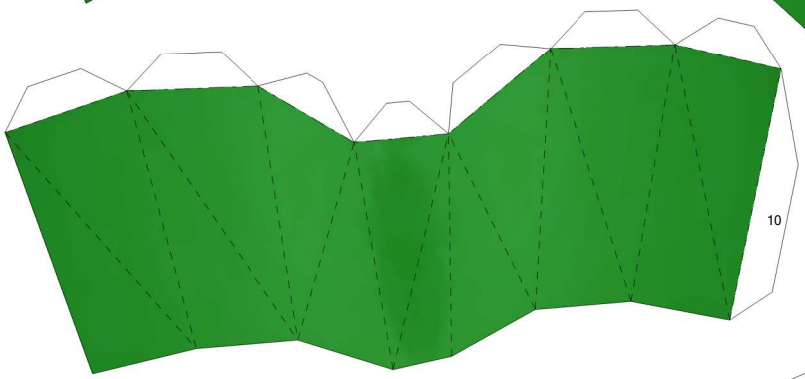

The legs are connected right after they are built. You can connect the both to piece 15 before joining it to the tail.

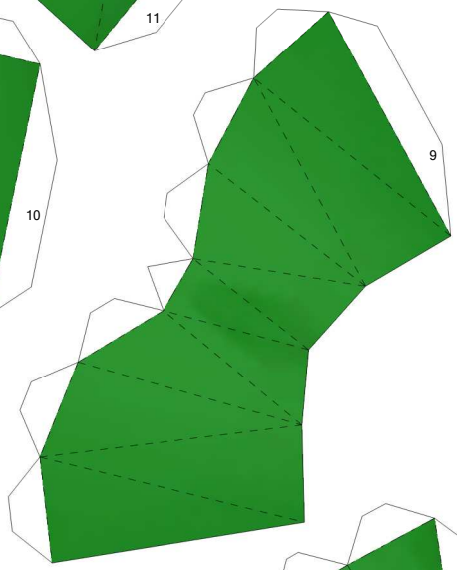

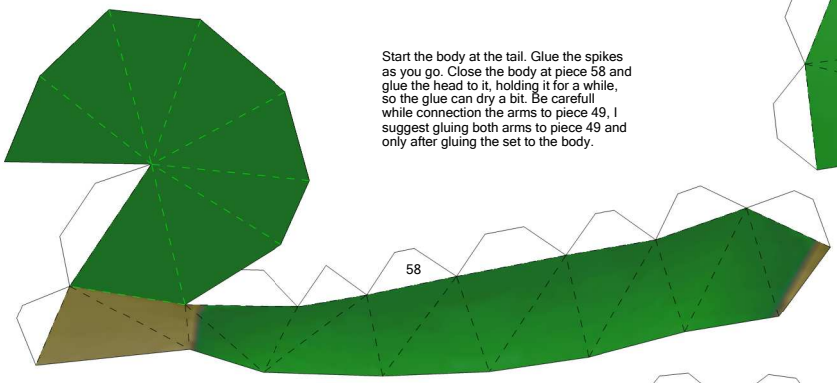

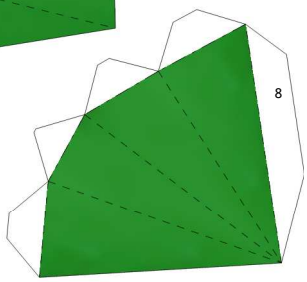

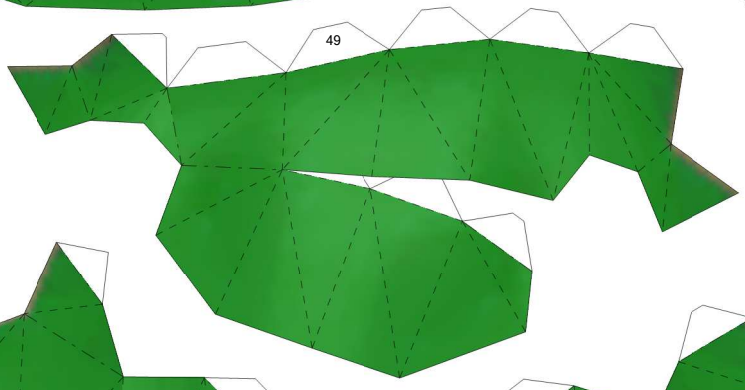

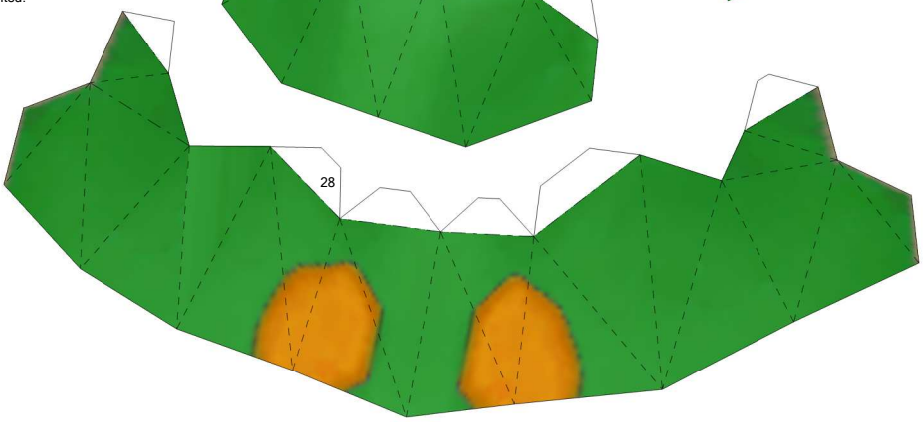

Start the body at the tail. Glue the spikes as you go. Close the body at piece 58 and glue the head to it, holding it for a while, so the glue can dry a bit. Be carefull while connection the arms to piece 49, I suggest gluing both arms to piece 49 and only after gluing the set to the body.

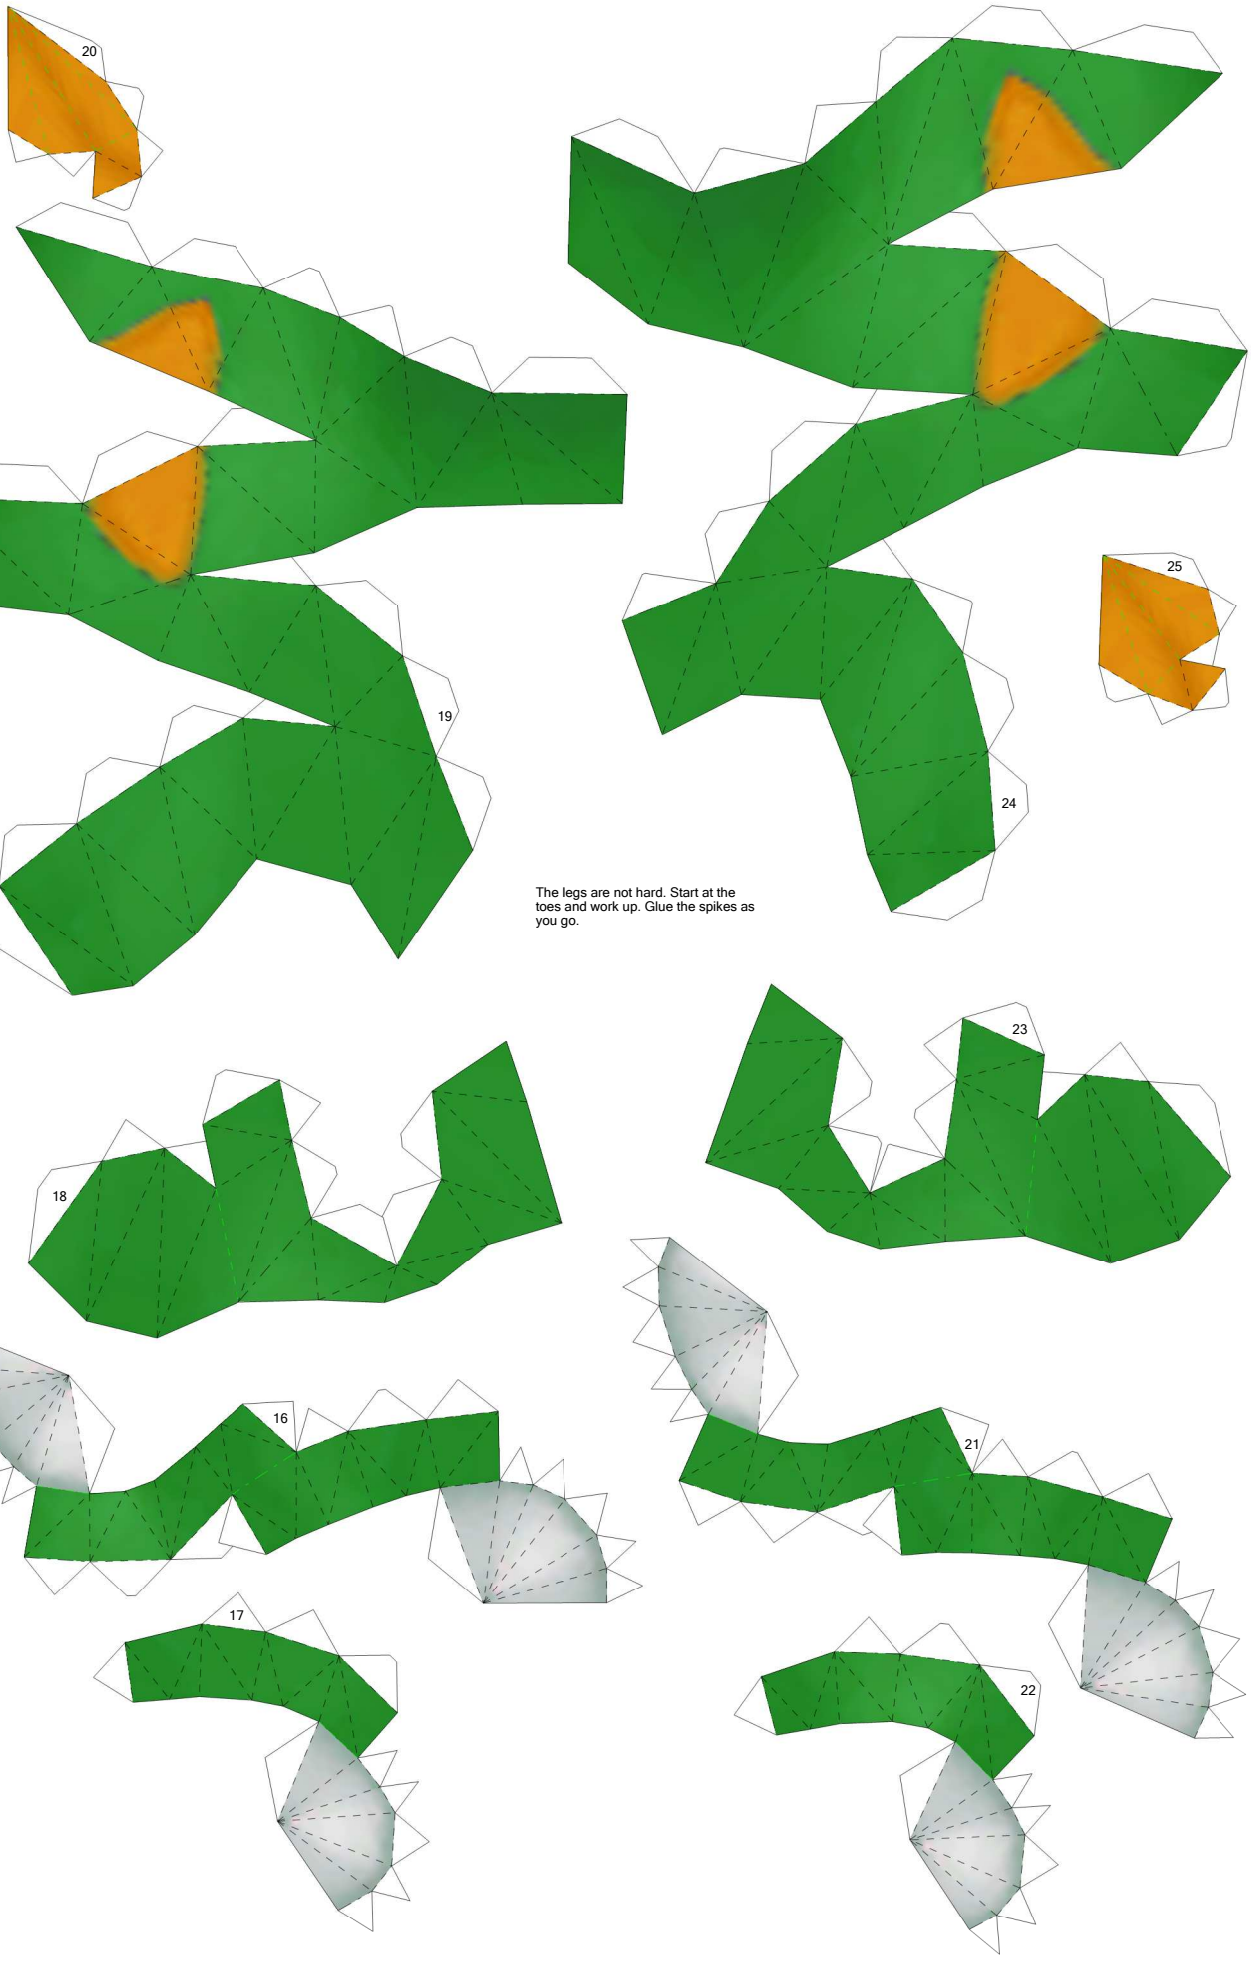

The model can't stand on it's own. Before closing it, add some weight untill it stands, but don't forget to consider the head and wings weight before closing. The wings MUST be glued before the body is closed and the model is counterweighted.

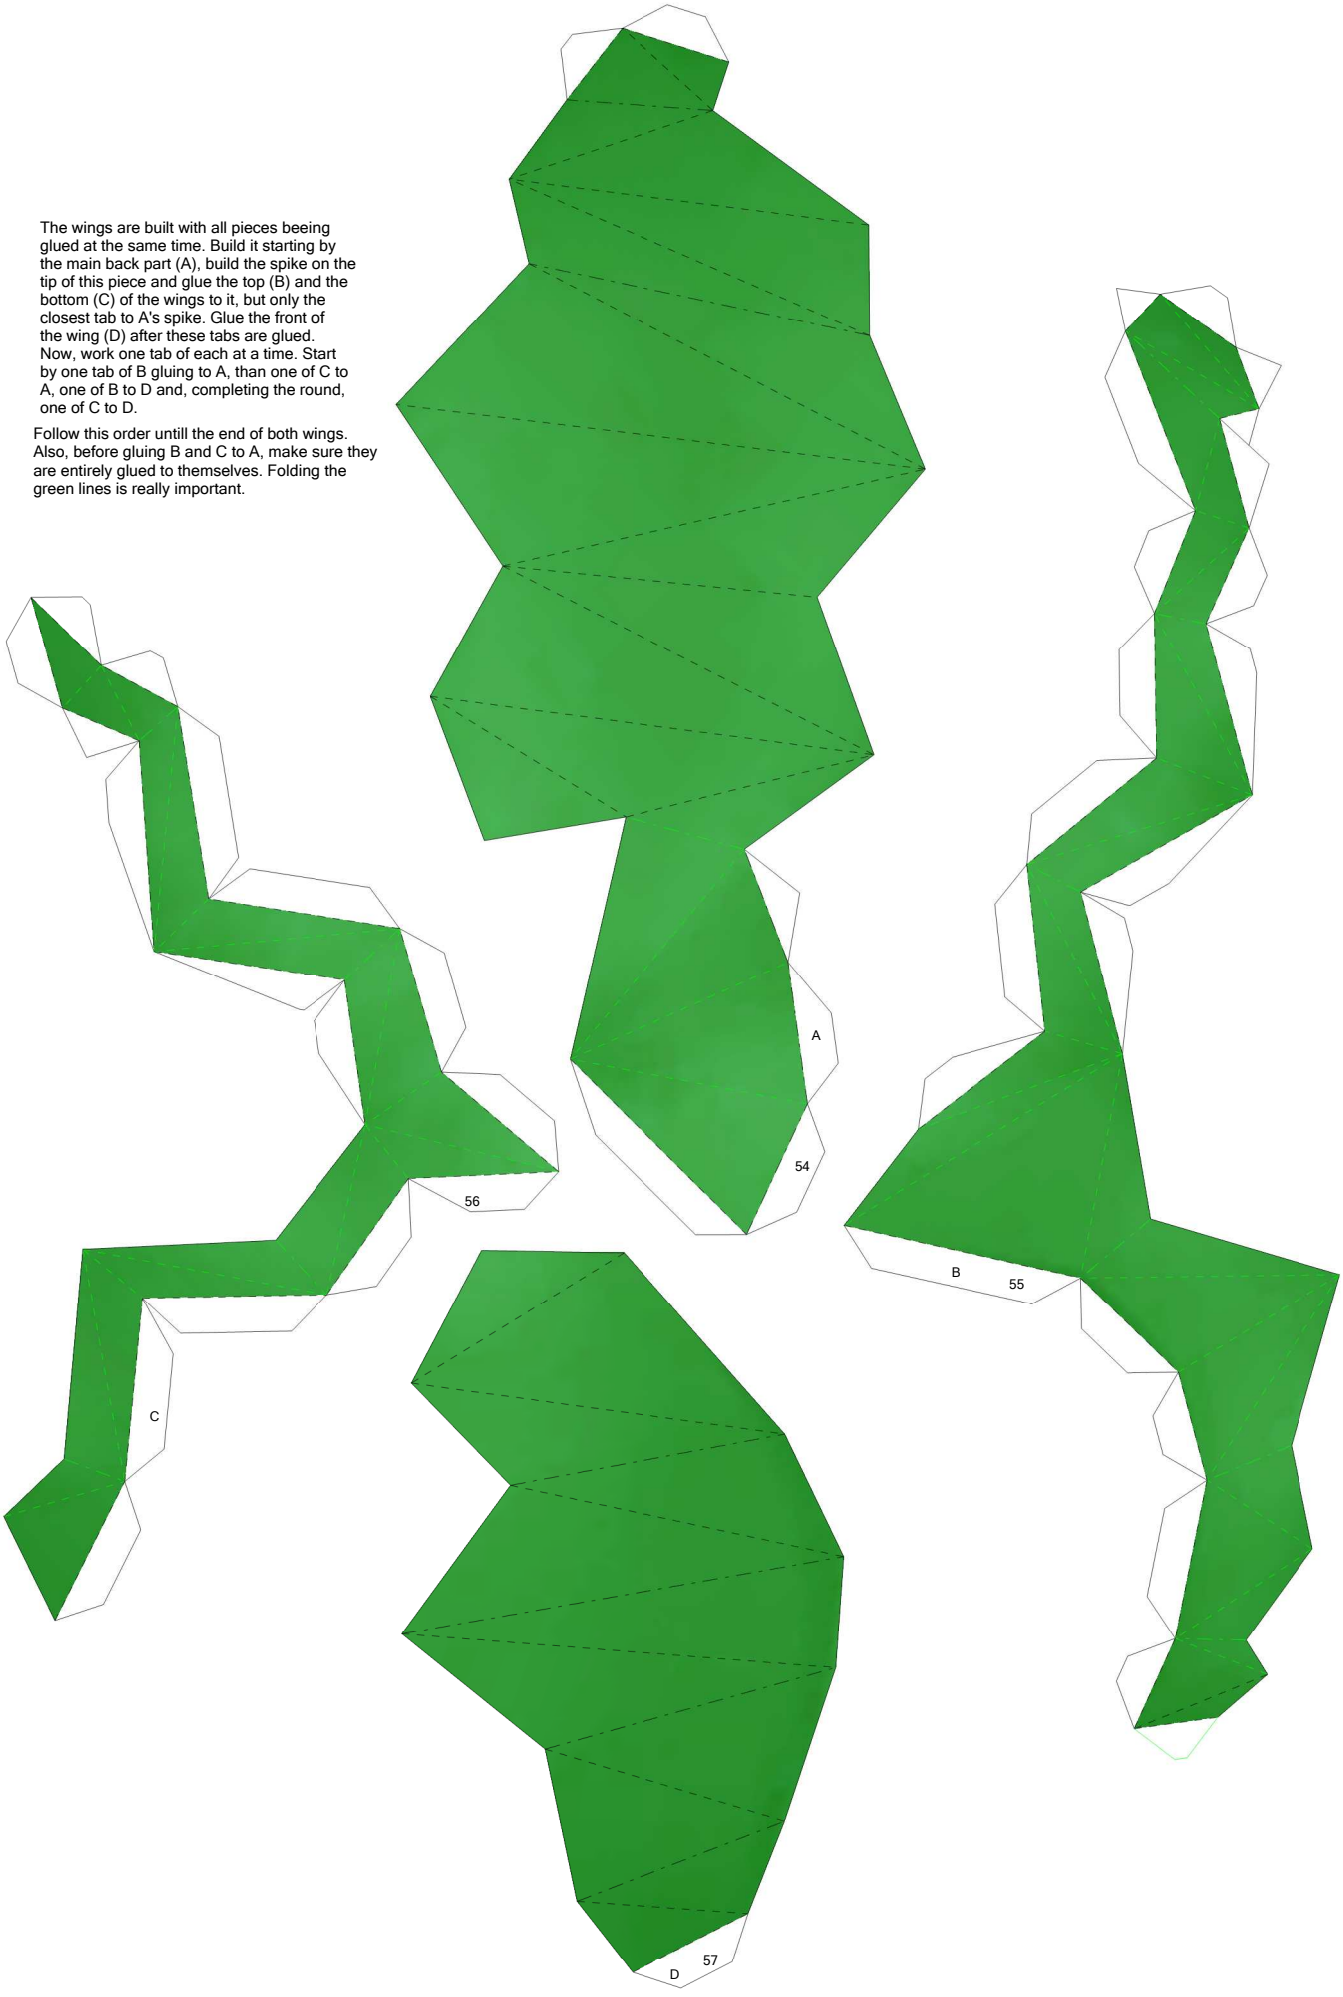

Start the arms by the hands. Be carefull, the claws can offer some trouble. Make sure to follow the numbers here. Glue the spikes as you go. Use of the pdo while building the claws will be really helpfull.

The legs are not hard. Start at the toes and work up. Glue the spikes as you go.

The wings are built with all pieces beeing glued at the same time. Build it starting by the main back part (A), build the spike on the tip of this piece and glue the top (B) and the bottom (C) of the wings to it, but only the closest tab to A's spike. Glue the front of the wing (D) after these tabs are glued. Now, work one tab of each at a time. Start by one tab of B gluing to A, than one of C to A, one of B to D and, completing the round, one of C to D.

Follow this order untill the end of both wings. Also, before gluing B and C to A, make sure they are entirely glued to themselves. Folding the green lines is really important.

Glue the wings to the body before closing the body.
