Onion Knight
Ninja EX

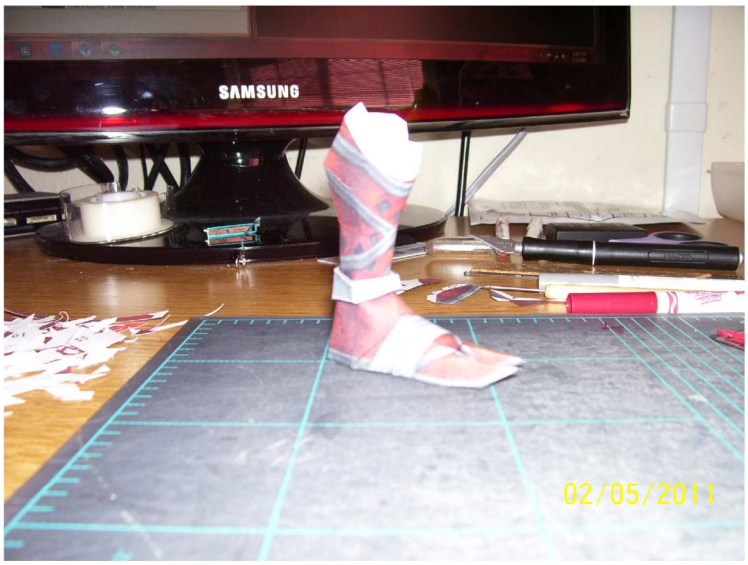

Hello everyone

Silentmana here this is the second model I have made.
I hope u guys like this model I have tried to make it
simple as possible to build. through out the the
Instruction u will notice that there will quite a few
words misspelled. I apologize for that I am
horrible at spelling and since i am makeing the instruction
through Pepakura there is no spell check. anyway
have fun builing this and look forward to seeing
the Mage EX soon

First start by glueing parts 1 - 4 together
next make part 5 if u have any scrap paper use
that to provide support for pt 5 or it will collaps
next build pt. 6-7

before you glue these parts together
i suggest put some pennies in the feet
for counter weight 2 or 3 in each foot
should do it

next glue together pt. 8-9
then glue pt. 8-11 together
I suggest glueing pt 8-9 to
11 first before you glue it to
10 also don't worry about
crushing pt10 a little you
won't really notice it

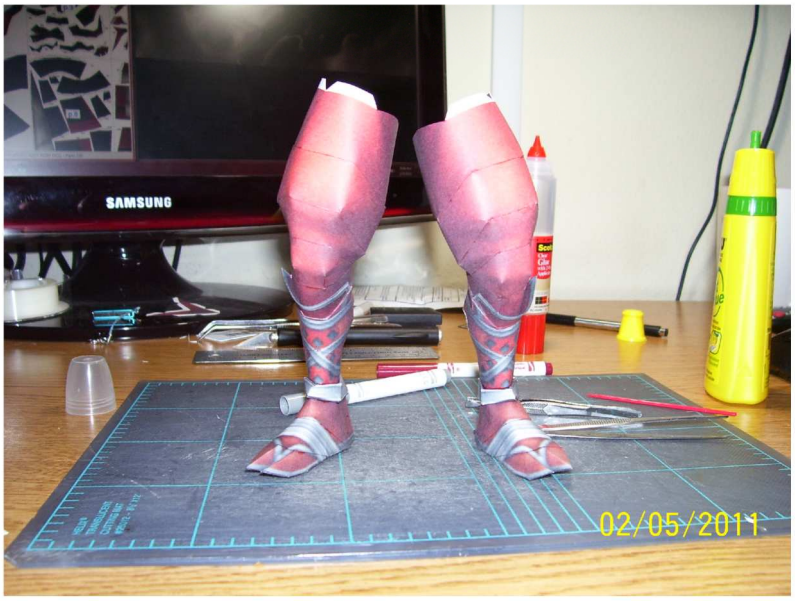

Finally glue pt 12 - 15 together and u are done with the left leg

repeat the process with parts 16-30 for the right leg and don't forget the weights

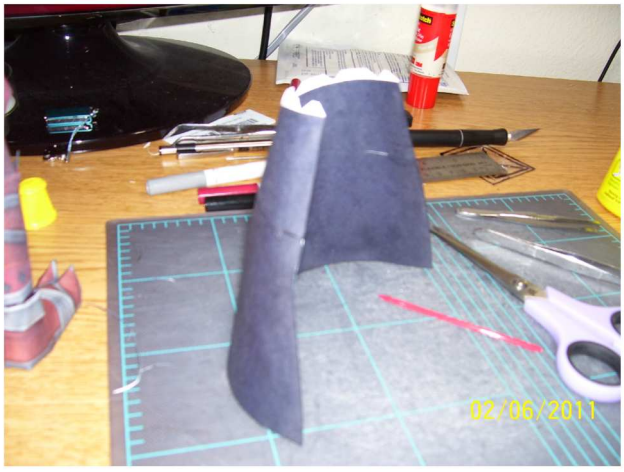

next glue pt 31 & 32 to the legs. then glue part 33 to them

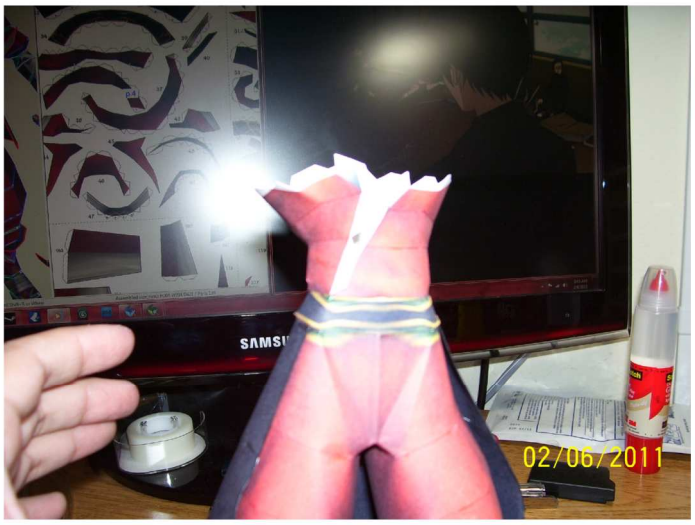

next find pt 7a-7b and 8a-8b and glue those together

next glue the waist clothe you just made to the matching tabs marked with a ◆ dot

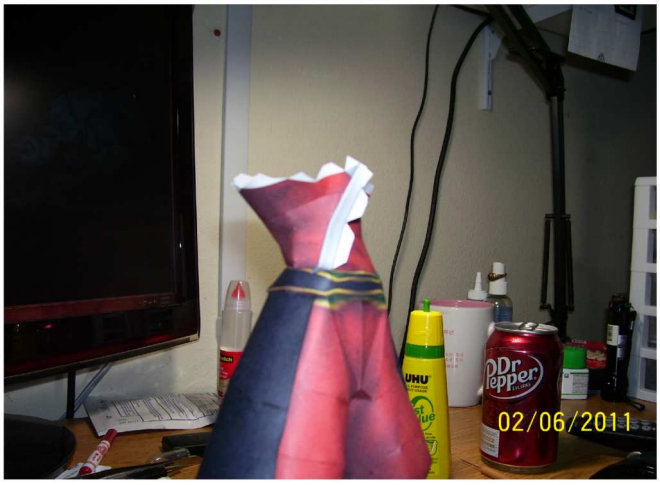

next glue pt 34 on top and then put together pt 41 - 42 if you want to glue the buckle to body now go ahead or wait till you got the lower torso built

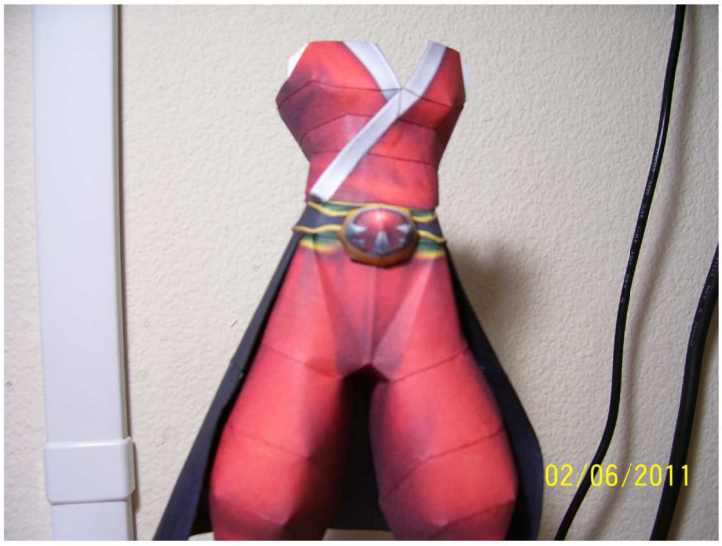

next glue pt 35 - 37 onto the body but do not glue any tabs marked with a ◆ dot

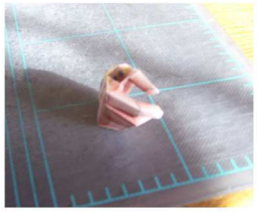

glue together pt 39 -40 together then gule them to the matching tabs

after that then you close off pt 35 -37

glue pt 38 + 43 to the body
and then move on to the arms

next pre construct pt 50, 51-52,
53-54, and 55-56 then glue
them together like so

then glue 57 - 58 to
the hand and then pt
59-60

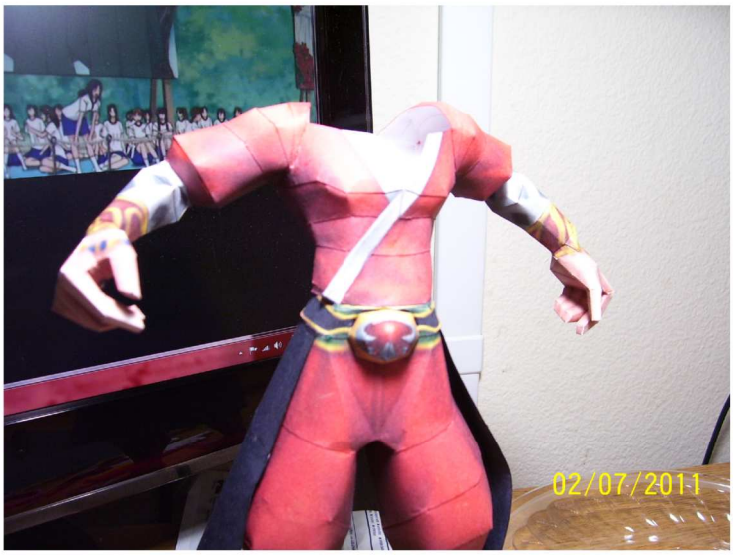

then glue pt 61-63 together
make you pay attention to how
you are glueing these parts together
its easy to mess up

repeat the process with parts
54-79

next glue the arms to the body
and then glue on pt 44- 46 then
move on to the cape

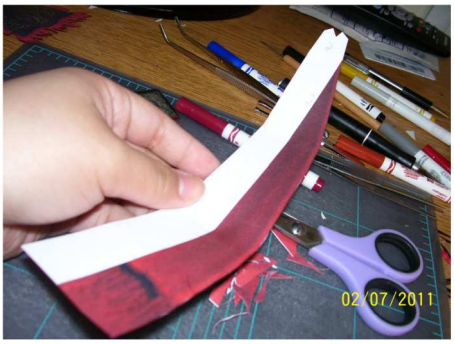

quick note if the body a starts to
look lopsided just gently force the
body into it needs to be in and
glue some scrape paper to the
inside to help it keep its shape

then glue together pt
80- 87

glue together pt 9a1 -9a4

then glue pt 11b to the back those parts like so

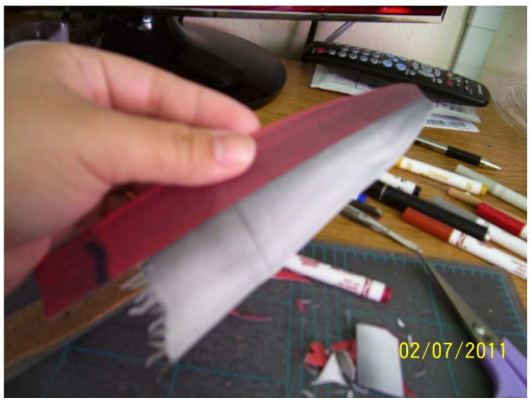

once you are done then trim the cape where I show you in the pictures

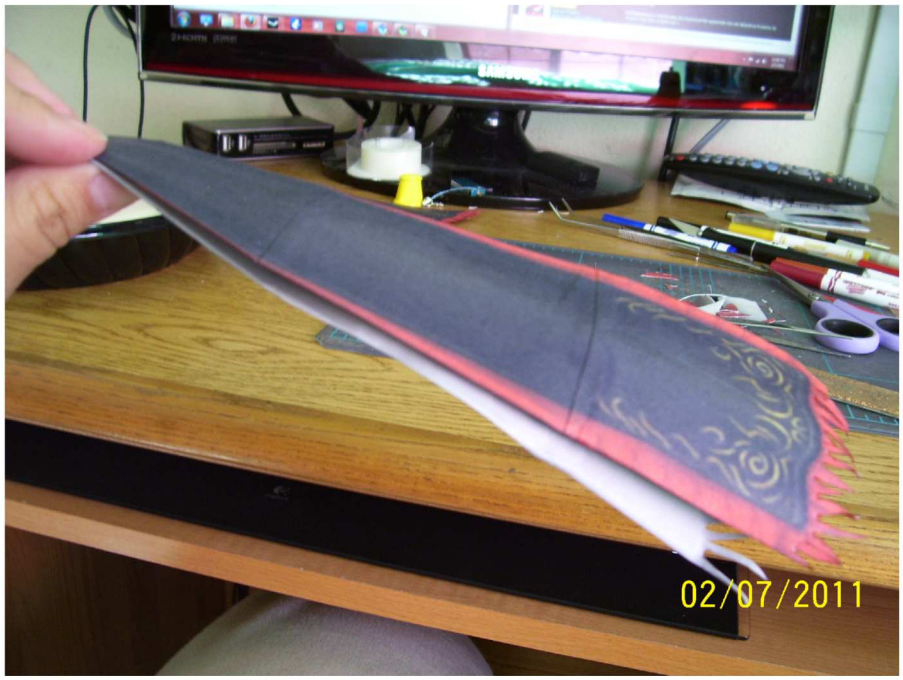

glue together pt 9b1 -9b4

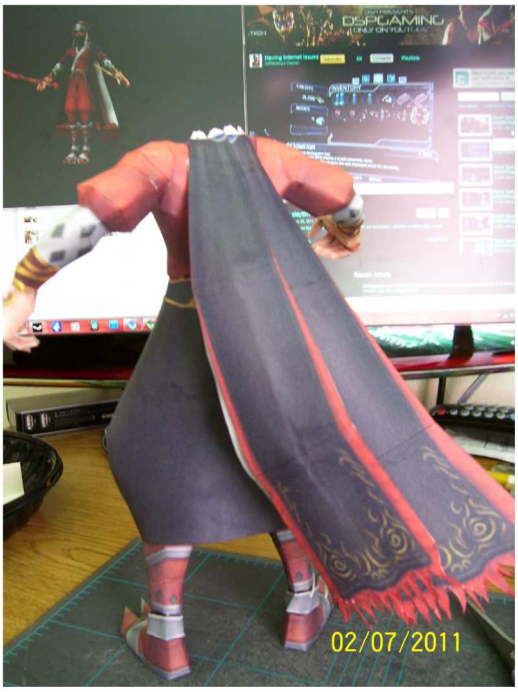

then glue pt 11a to the back those parts like so

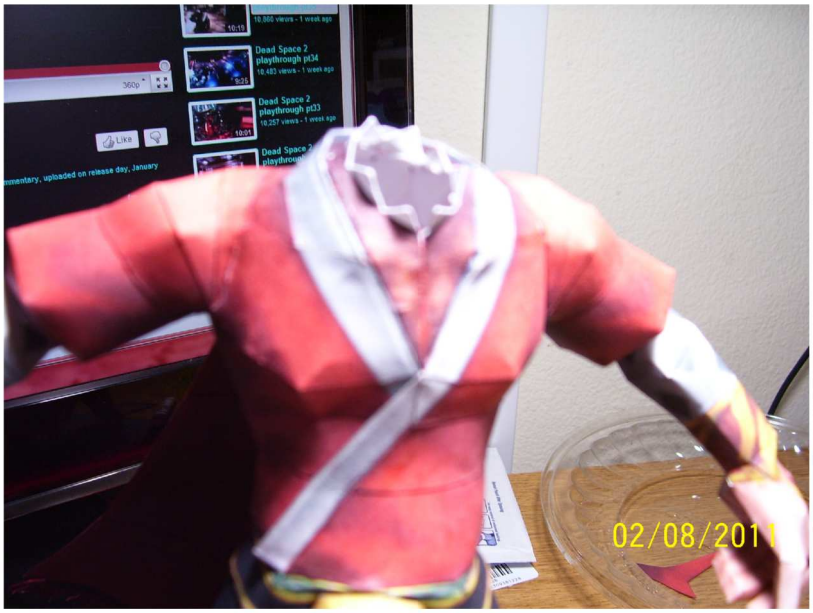

after that glue the two sides together and trim the rest of the cape

next glue pt 10a1 -10a4 and
10b1 -10b4 together. then glue
both parts of the cape to
the matching tabs marked
with a ◆ dot

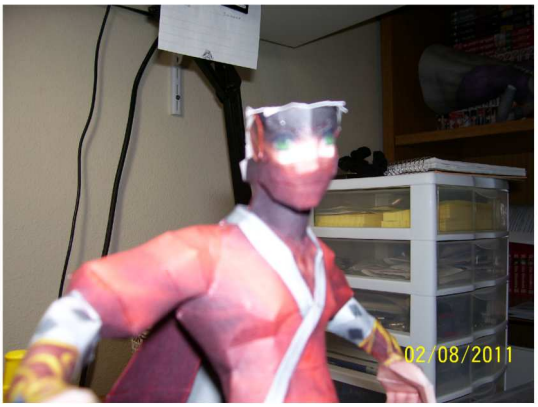

and now comes the most
difficult part of the model
glue pt 47 -49 to the body
plz take your time cause this
is hardest part of the
model because of how
little space you get to work with

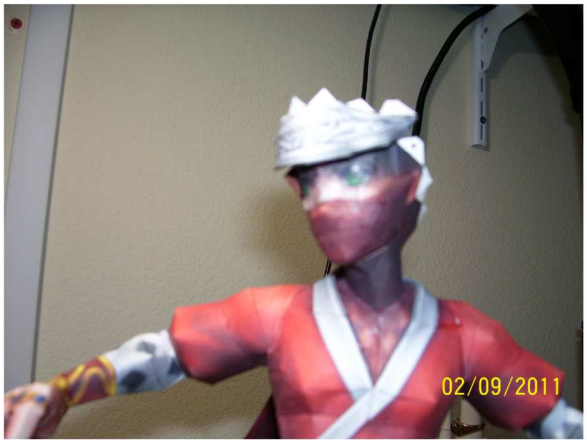

once you have finished that part glue pt 88 -95
together

next glue pt 96-101

next glue pt 102-105

next cut out and trim pt 1a & b - 6a & b
then gue pt 106 and then glue the pieces
to the face. refer the refernce guide for where
to put the pieces

next glue pt 107 & 108
to matching tabs marked with
a ◆ dot then glue pt 109-111

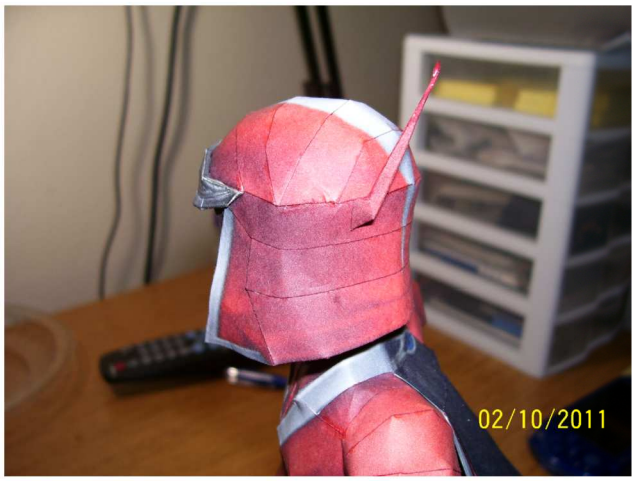

after that glue
pt 112-114

now preconstruct pt 117

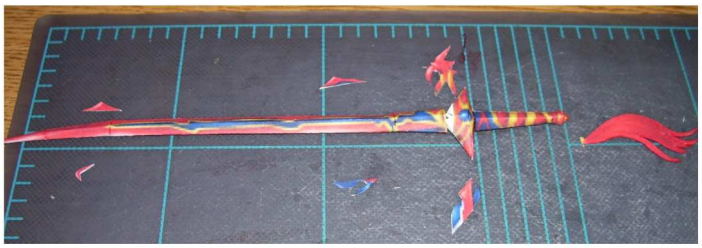

take your time with pt 114
when closing it and don't worry
it will fit perfectly just take yourtime

then glue pt 117 to the head
and now you are done with the
main model now to the weapons

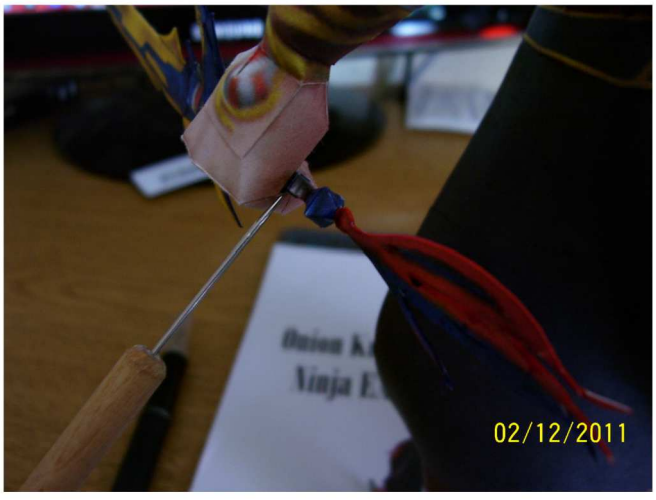

cut out & preconstruct pt 118-232

repeat the process with pt 233-245

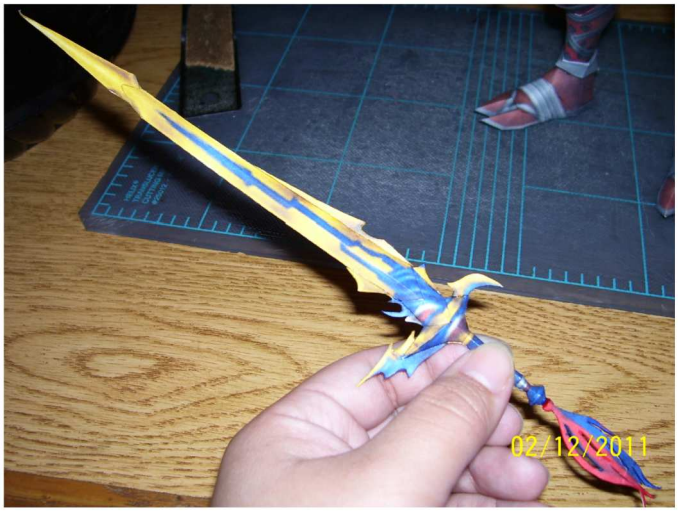

glue the blade part together

then the hilt put them aside for a few minates to dry

while they dry trim the small piece refer to the pics i provide to get an idea what they need to look like

then glue all the parts together

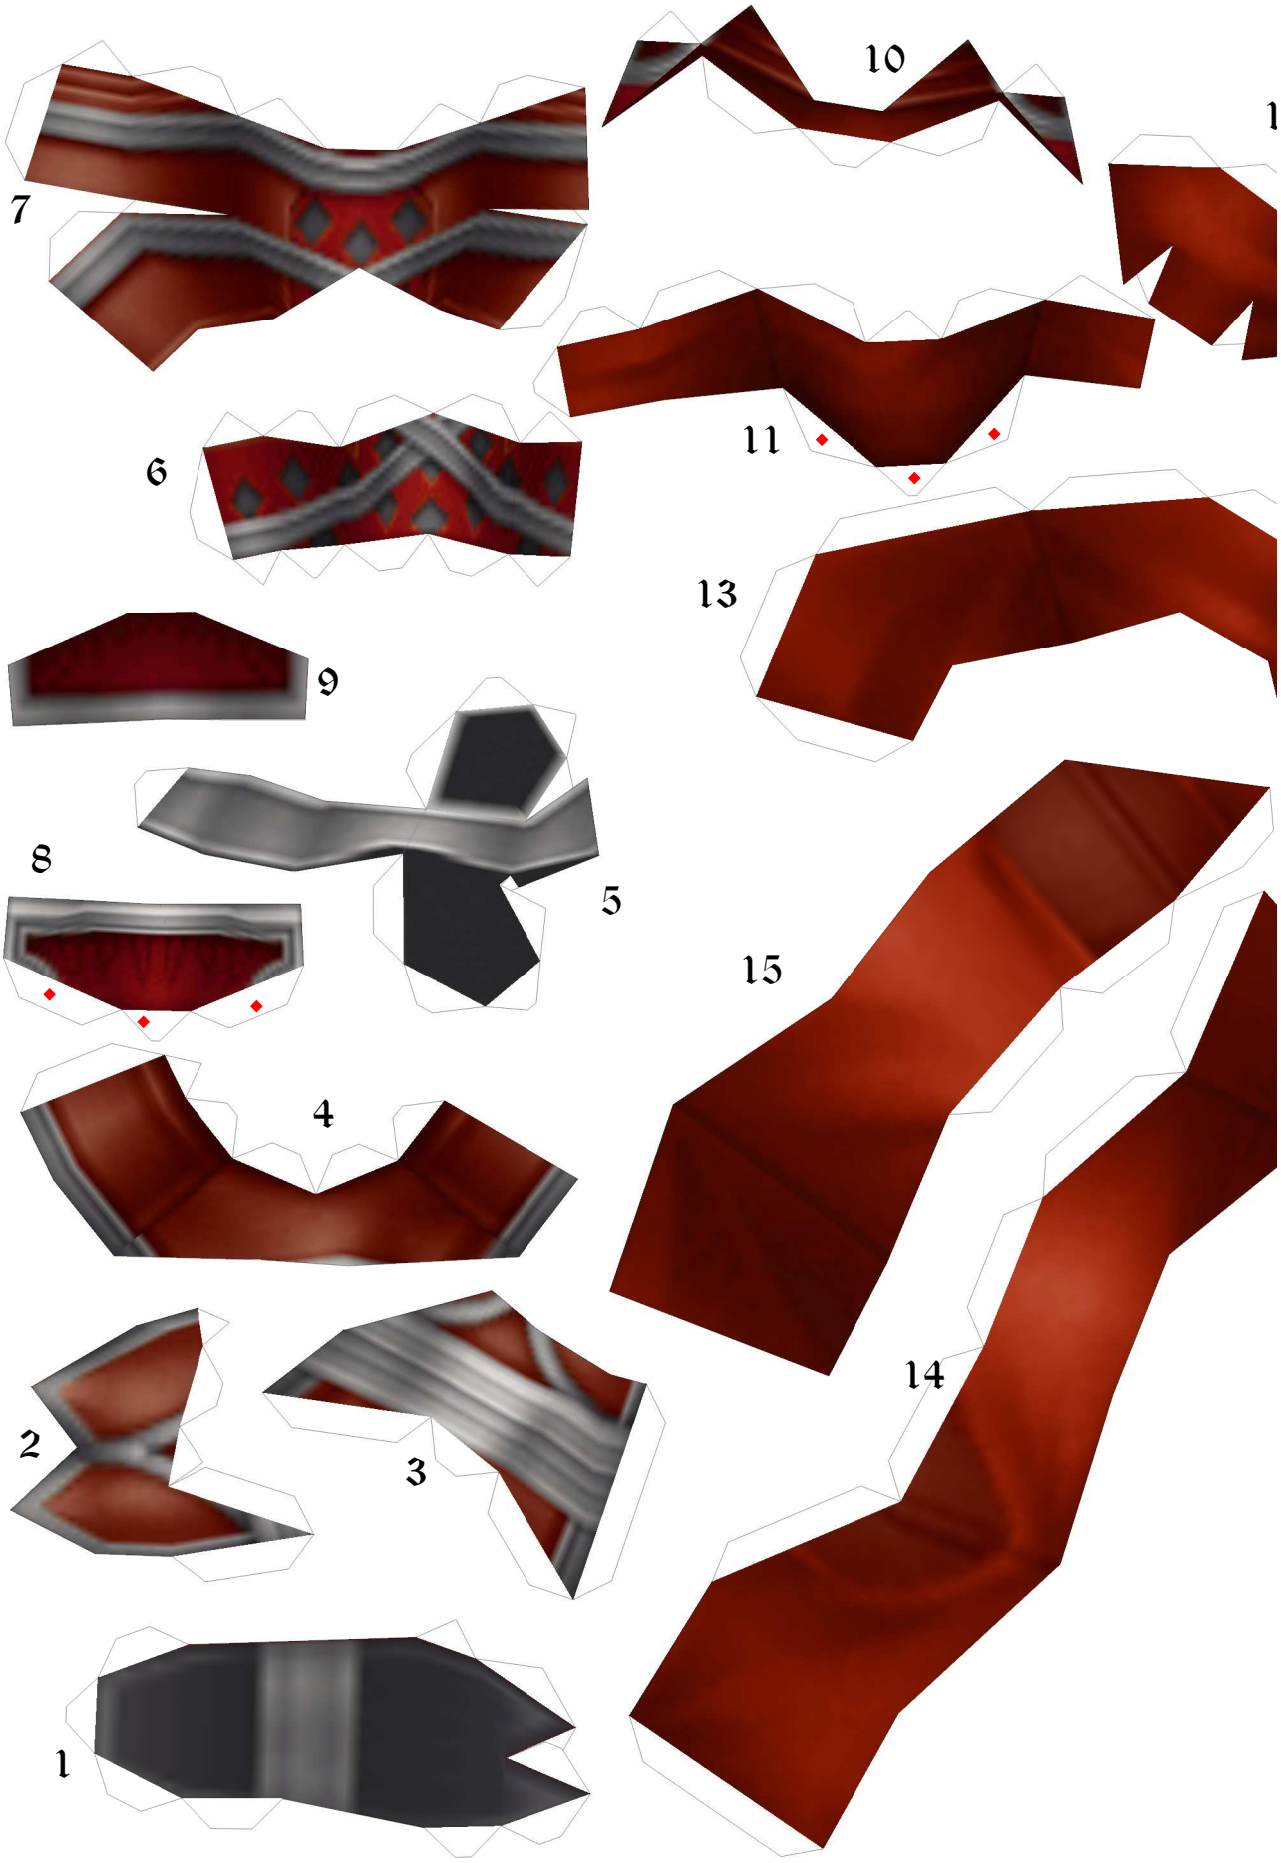

one more thing when attaching the swords to the hand unfortunatly the yellow sword needs to be glued on put a small dot where i am pointing to with my scoring tool in the picture

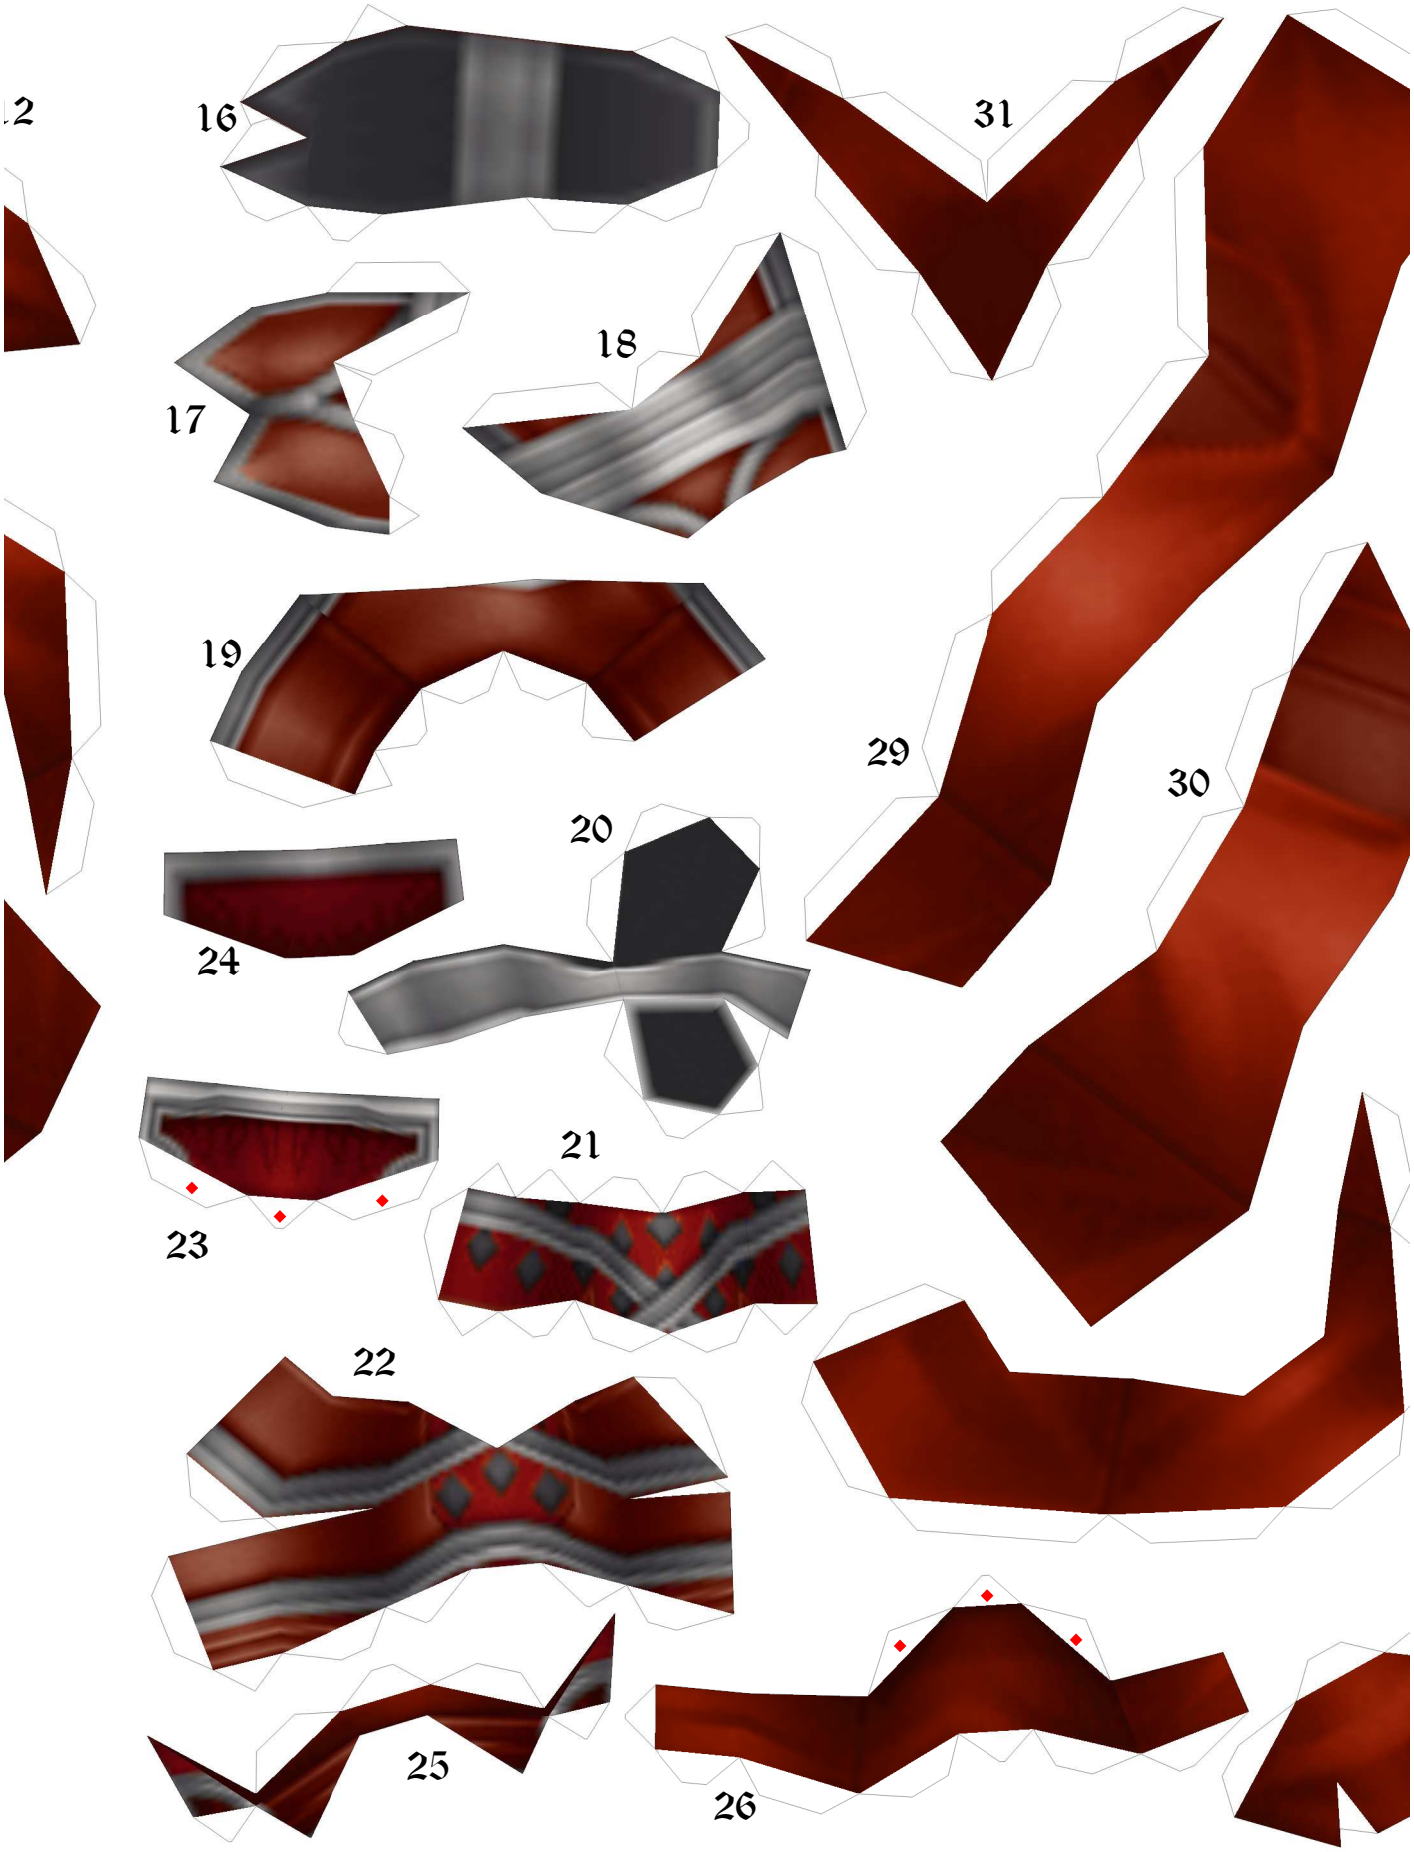

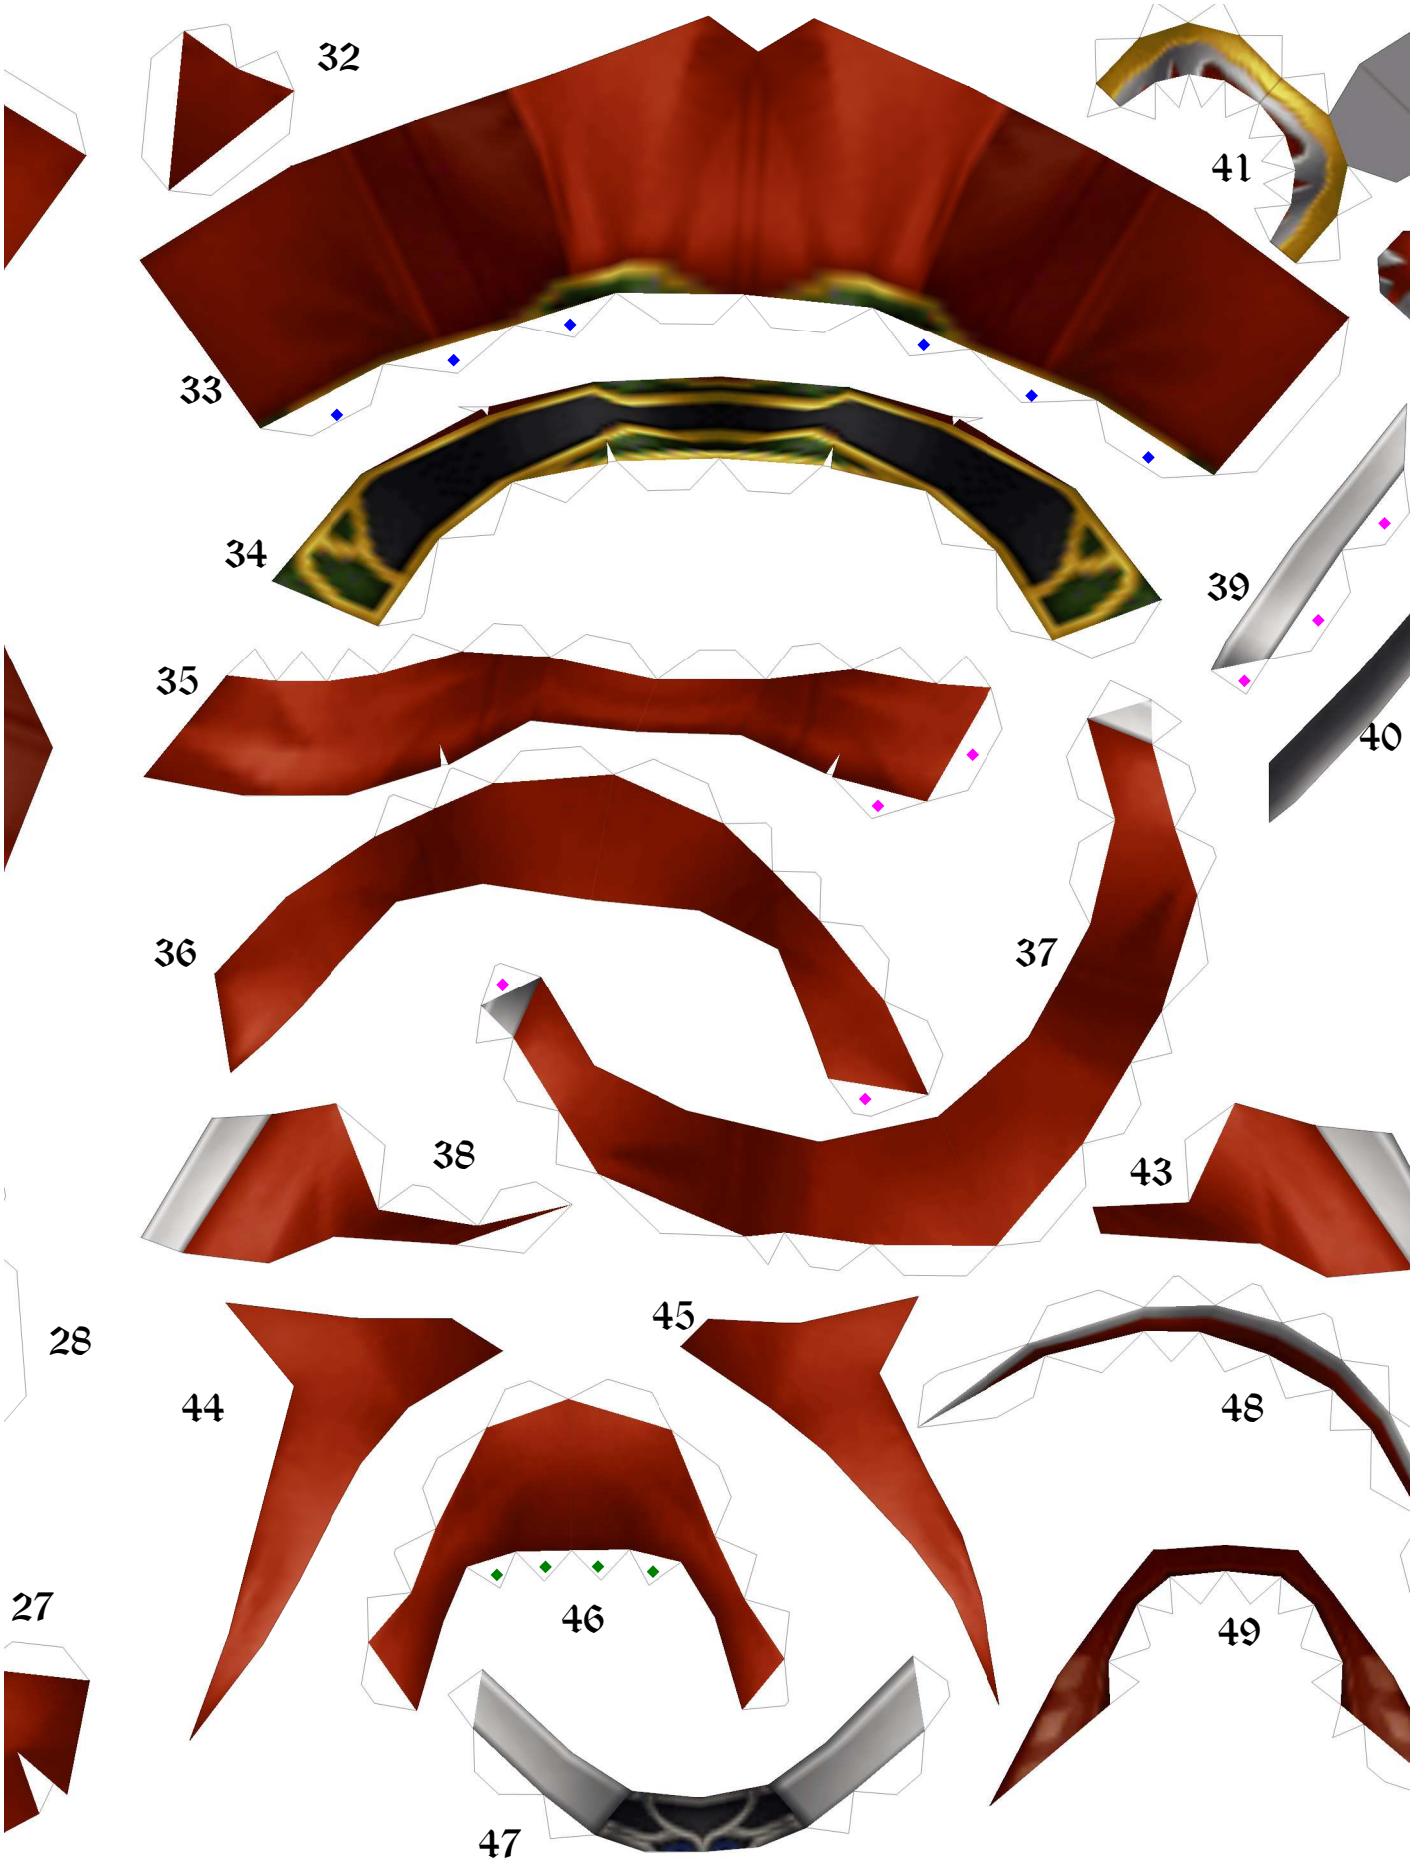

Now You Are Done
