14
Close the head with piece 15.
5
4
3
2
Start the head at the top.
Follow the numbers, specially
around the helmet connection.
It's important to connect it
BEFORE closing the head.

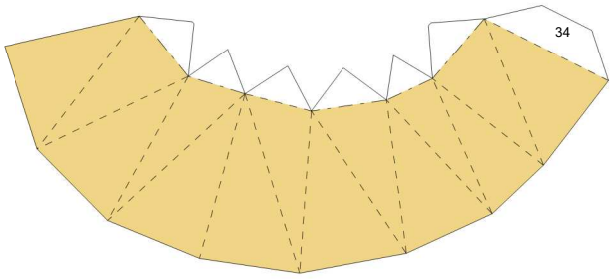

Start the helmet at the top.
Work the pieces horizontally,
one of each side at a time.
Be carefull with the placement of
piece 12. Glue the gem after the
helmet is built.

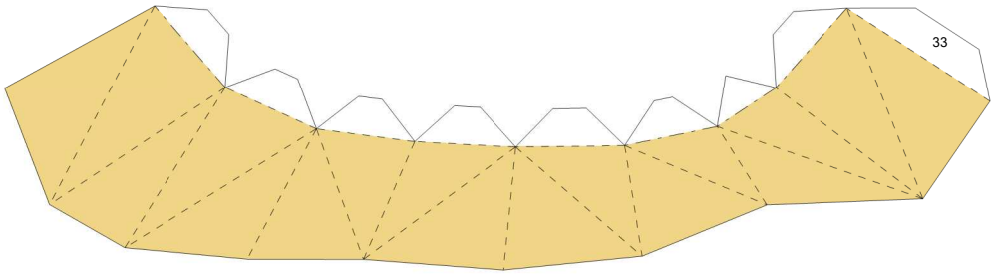

9
Start piece 11 by one of the sides and
work it to the other side.
11
10

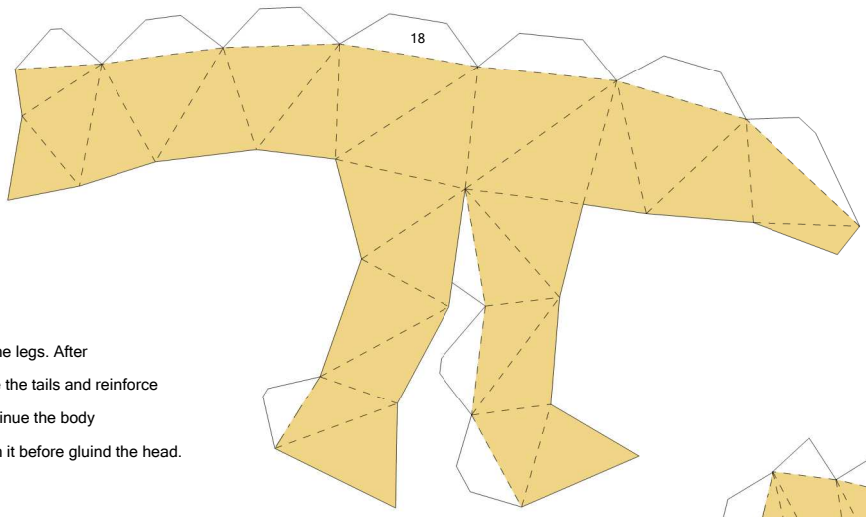

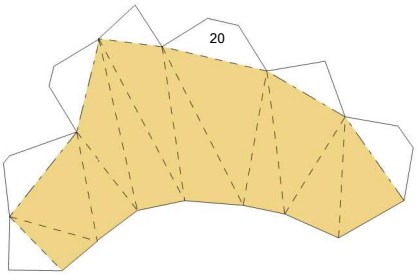

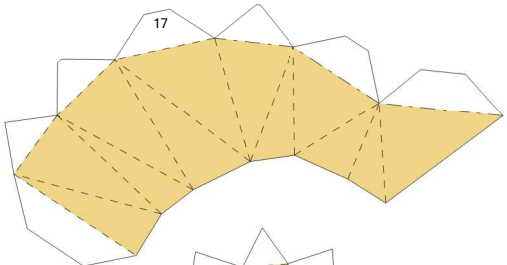

Glue piece 42 to the
head before gluing it to the body.
After it's place on the head, just pop
it in the body with a small amount of
glue.

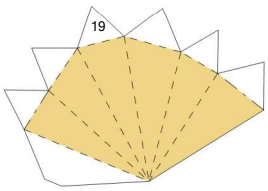

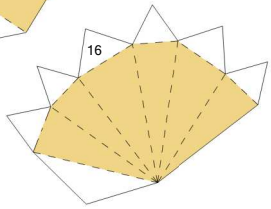

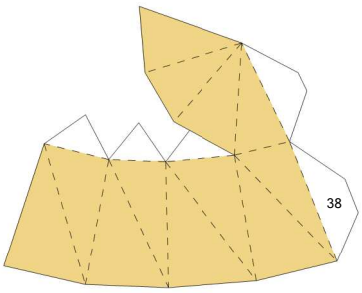

Start the body with the legs. After
they are placed, glue the tails and reinforce
the connection. Continue the body
and glue the arms on it before gluind the head.

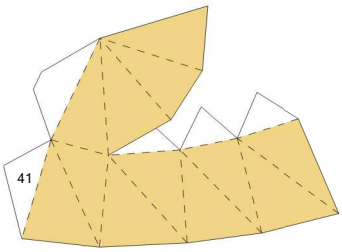

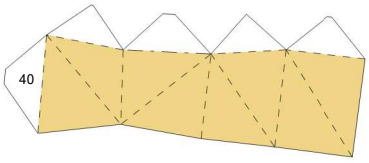

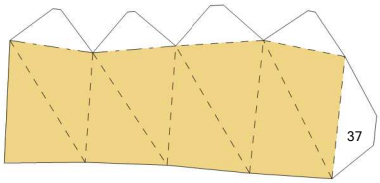

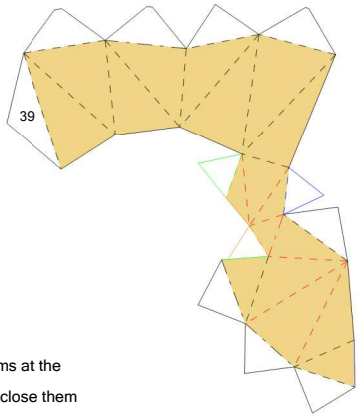

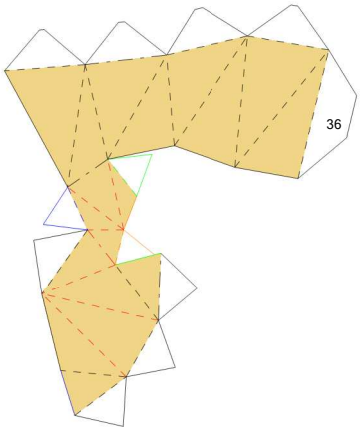

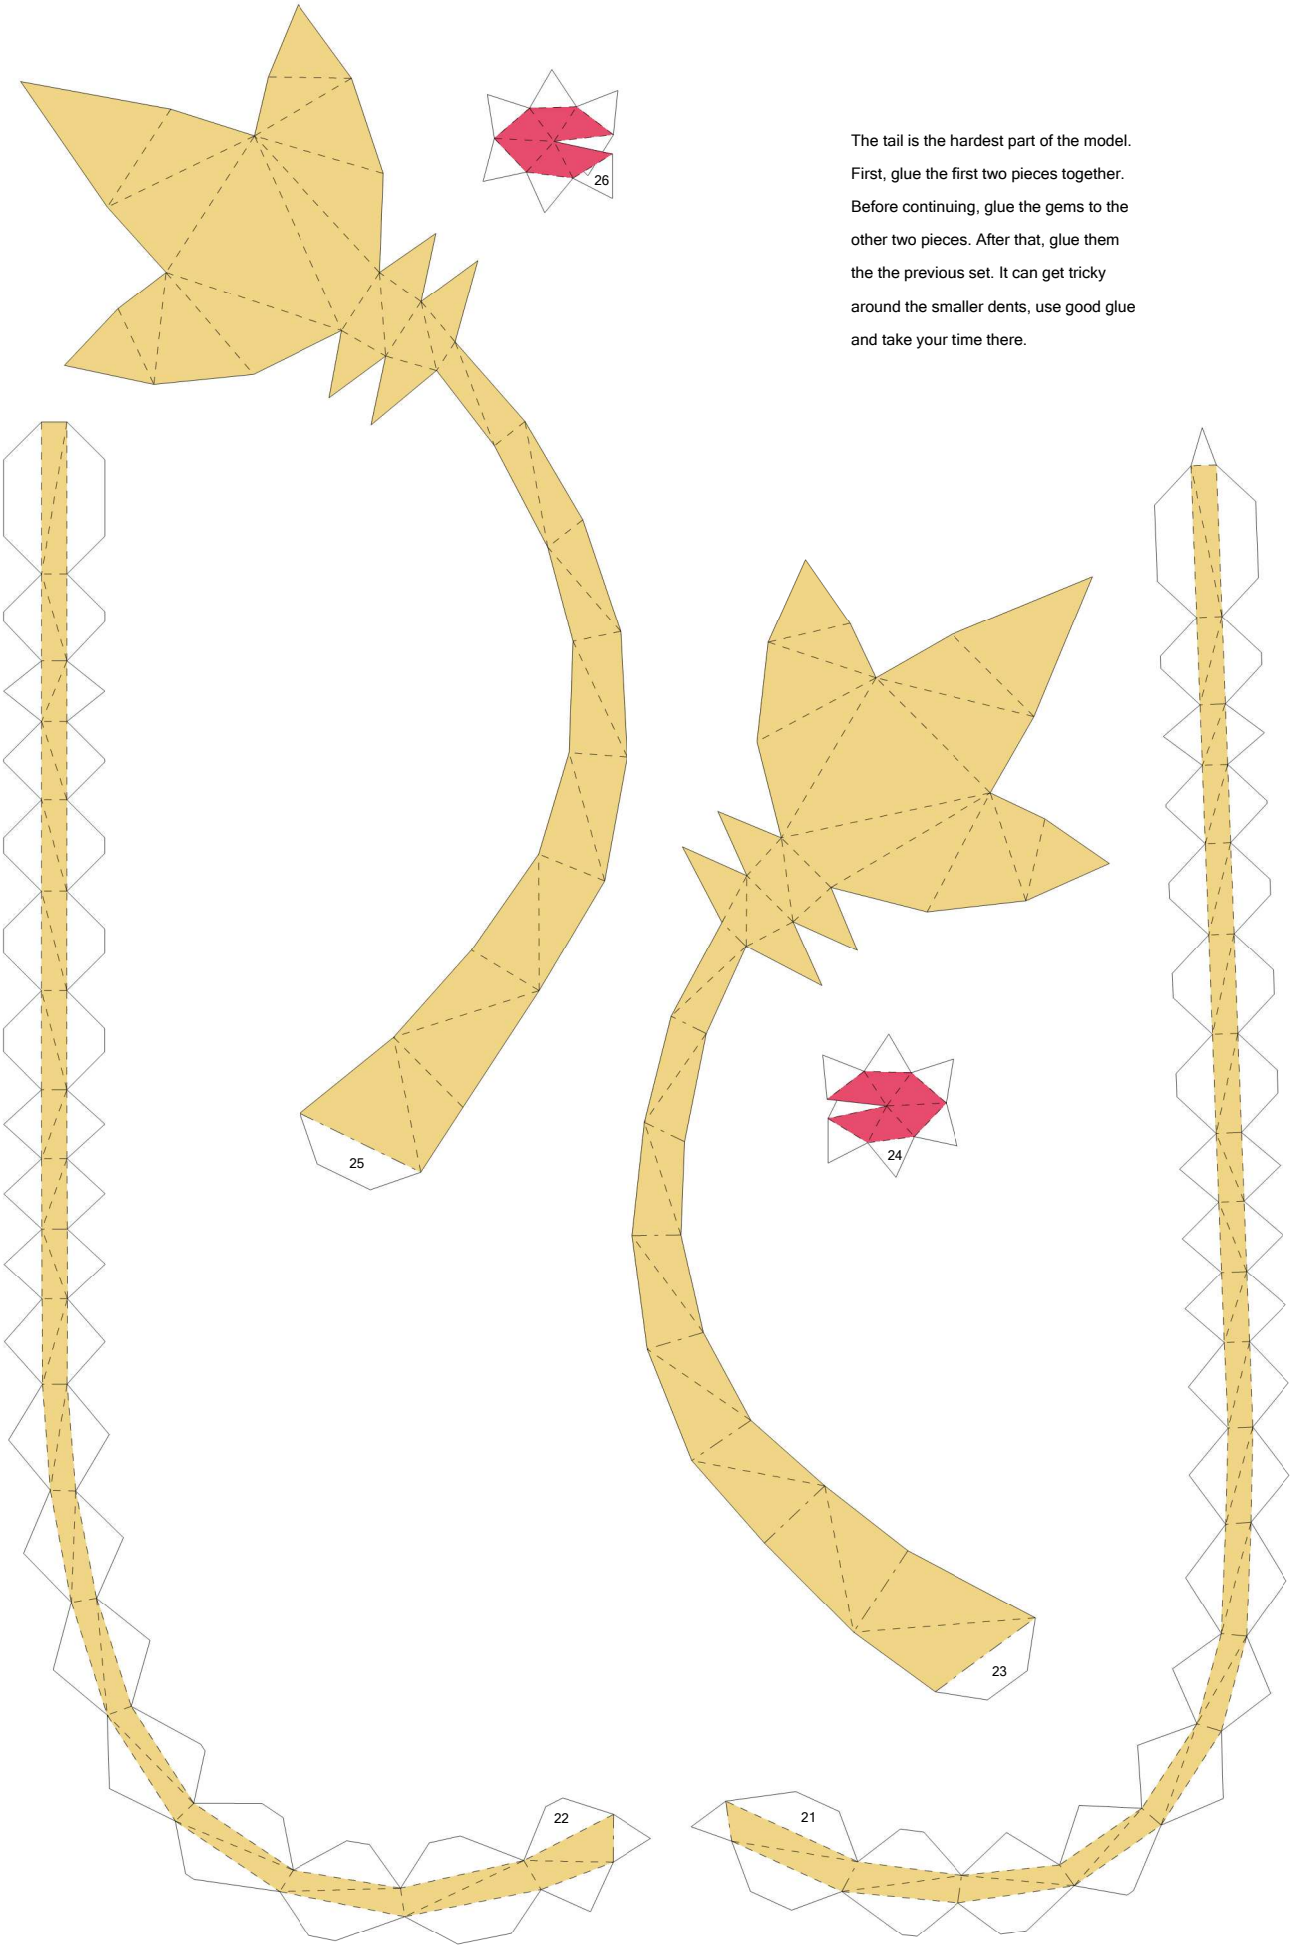

Start the arms at the fingers and close them at the top. Glue them to the body before joining the head.

Follow the colored references on the fingers.

Close the base at the bottom.

The tail is the hardest part of the model. First, glue the first two pieces together. Before continuing, glue the gems to the other two pieces. After that, glue them the the previous set. It can get tricky around the smaller dents, use good glue and take your time there.

Glue both the tails together before gluing them to the body. It's suggested to reinforce the connection between the body and the tails.
