

Pupitar V2

By Brandon

Build by LuIS

PaPerPokés
www.pokemonpapercraft.net

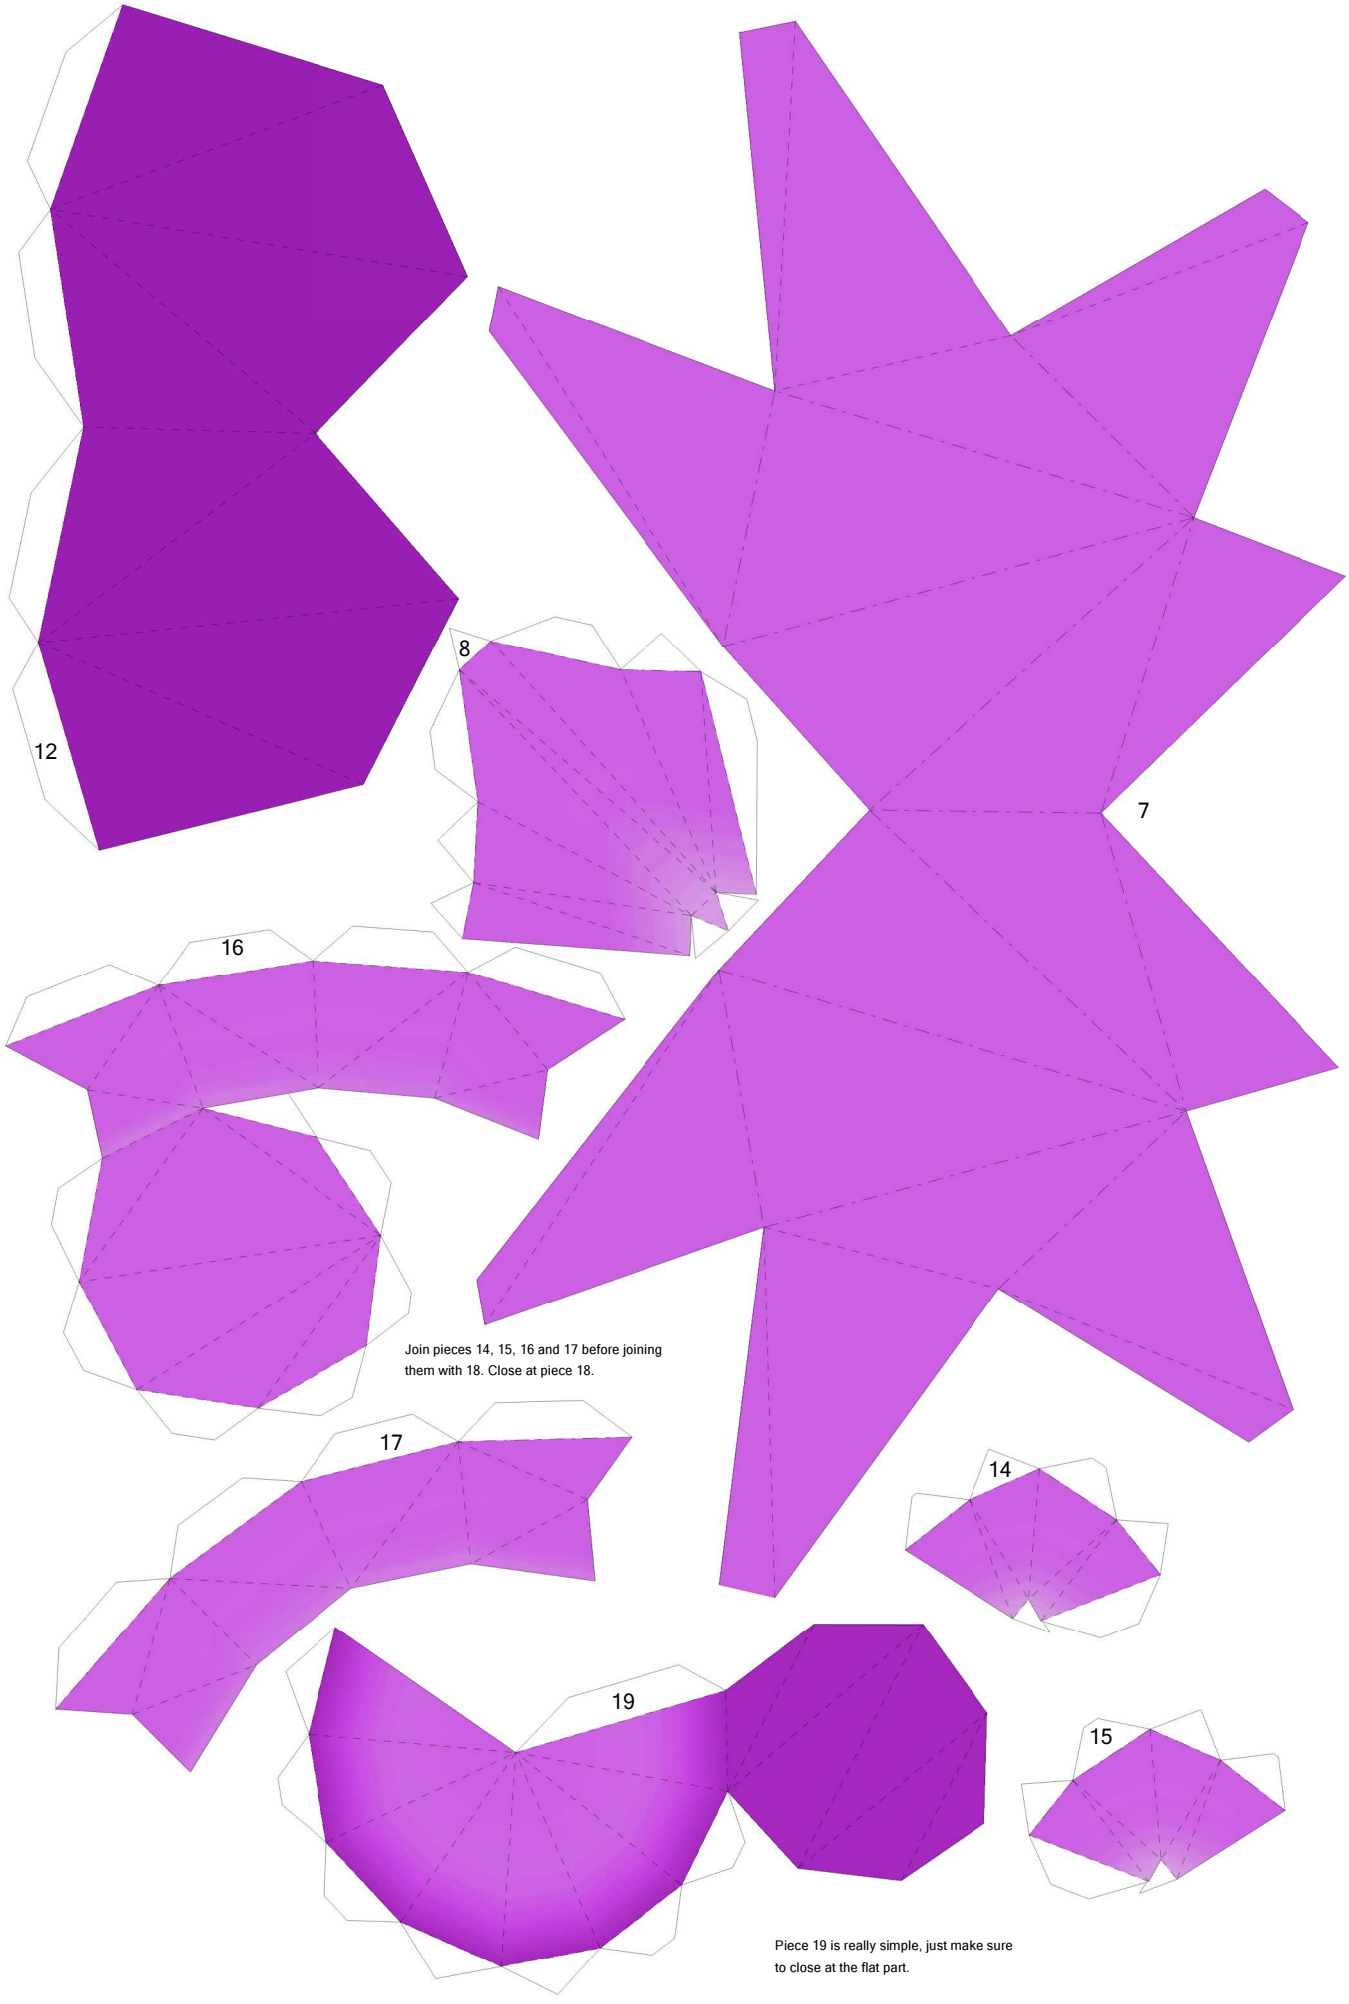

Build all the parts apart and join them together after it's all built. Start by joining the mask and the big part, than the medium part and after join piece 19.

Build the entire mask and add the eyes and "eyebrows" after it's built around itself.
Before start closing, add piece 6 to the mask.
Close at the bottom. Start by the color reference and close it switching one tab up and one down at a time.

Start the big division of the body by the top spike, wrap the piece with the other two around it and follow the number to the bottom (13) and close there.

Piece 19 is really simple, just make sure to close at the flat part.

Keep in mind that it don't stand
on it's own, even with a base would be hard
to make it stand. I suggest using strings to
exhibit it.
