Cutout - make a hole

Model : No. 0304/IV/13

RPG-7

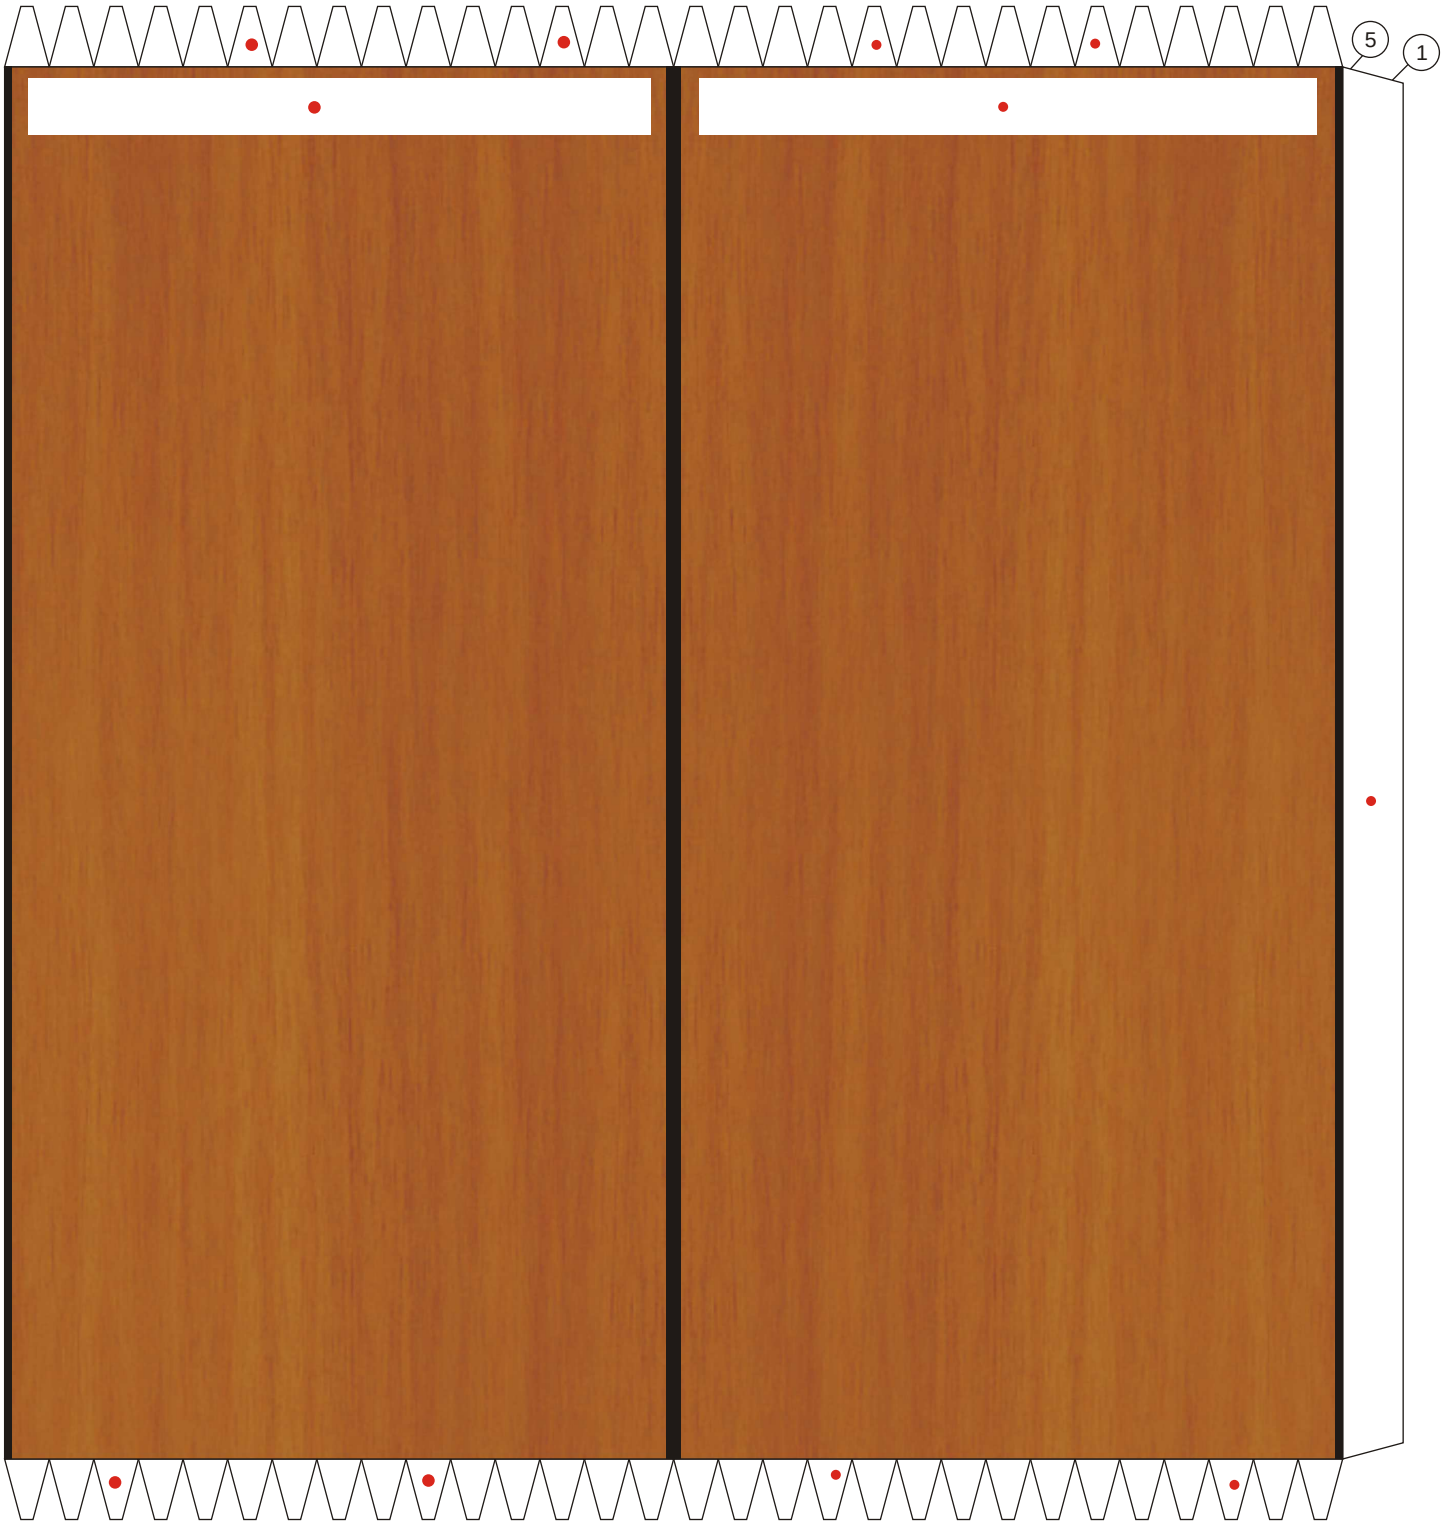

Rocket Propelled Grenade - Scale 1:1

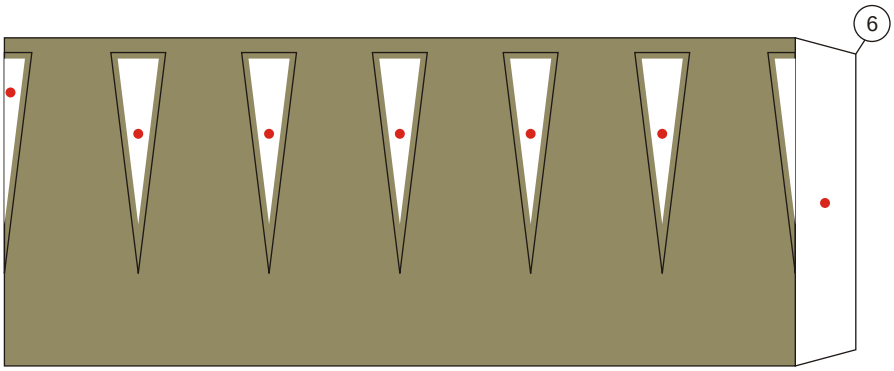

This model is a request from Paper Replika new Facebook group, Paper Replika Friends. On that group you can discuss about every model made by Paper Replika and also you can make suggestion or request of model that you like and want to be made as paper model pattern. Every request will still filter by me, and only approved requests will be made. This RPG-7 paper model template contains 30 pages of patterns. The scale is 1:1, so I also made its inner construction. The warhead can be detach but with simplified model. I recomend to use 200 gsm paper and thicker for its inner constructions. This Soviet portable unguided rocket missile is very popular heavy weapon among armed forces in many countries. Some countries copied its design or reproduce under license.
