American McGee's Alice assembly manual

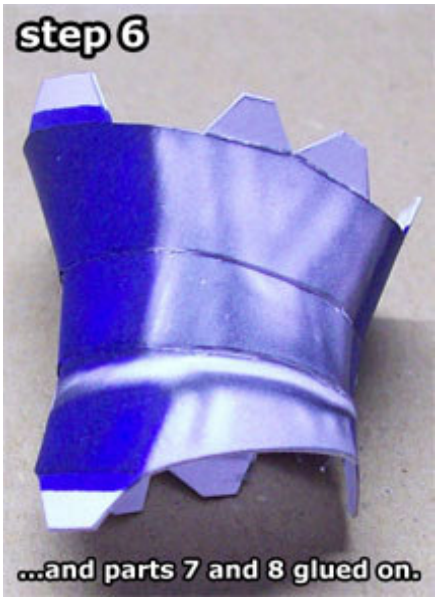

step 3
After pre-shaping part 1 (please see my "Red Hollow Cylinder tutorial" at http://ninjatoes.blogspot.com/2008/10/red-hollow-cylinder-tutorial.html if you have no idea what that means) glue it into a cylinder.

step 4
Do the same for parts 2-5 and then glue them together as shown here.

step 5
The upper part of the dress goes together in much the same way with part 6 here...

step 6
...and parts 7 and 8 glued on.

step 7
When glueing on part 9, don't forget the little valley fold at the front to start Alice's chest!

step 8
C
C
Part 10 also has that same little valley fold.

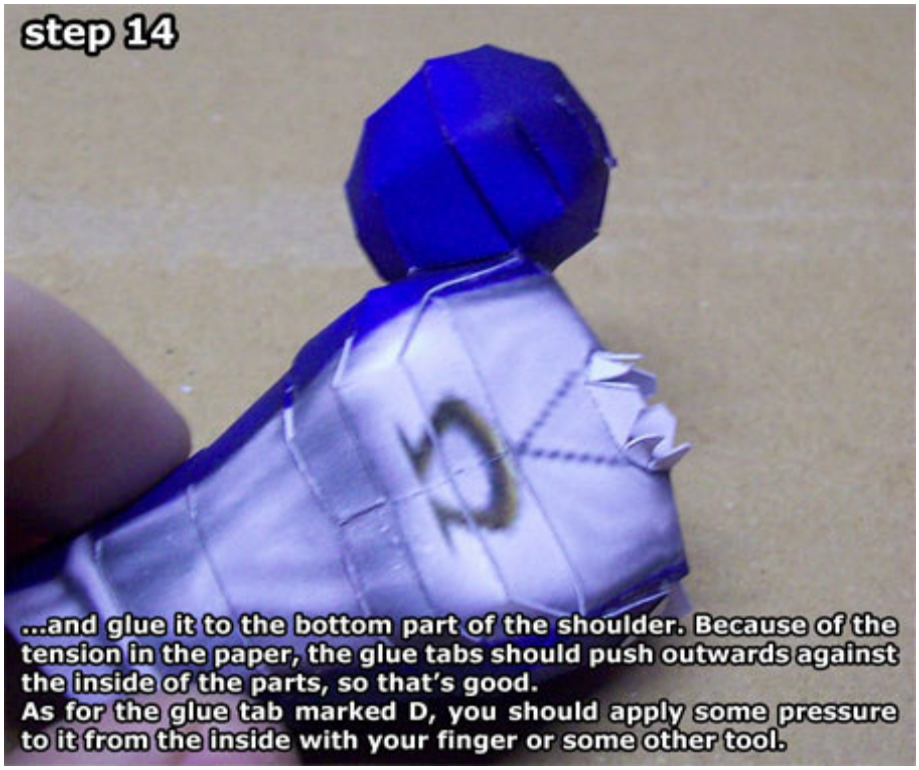

step 9
C
C
Take your time to glue on part 11 (and every other part) properly, there's no rush.

step 10
C
Now glue on part 12. The best way to do so is to first glue together the back of part 12, and then glue the front to the chest. When that's secured, fold over the back (you did pre-shape, right?) and glue the back together.

step 11
Building the shoulders is easiest if you do it part by part. So start with part 13...

step 12
...and then glue it to the torso. Use the labeled glue tabs (A-C) for guidance (note that they're all valley folds)

step 13
Now make the other half of the shoulder (part 14)...

step 14
...and glue it to the bottom part of the shoulder. Because of the tension in the paper, the glue tabs should push outwards against the inside of the parts, so that's good.
As for the glue tab marked D, you should apply some pressure to it from the inside with your finger or some other tool.

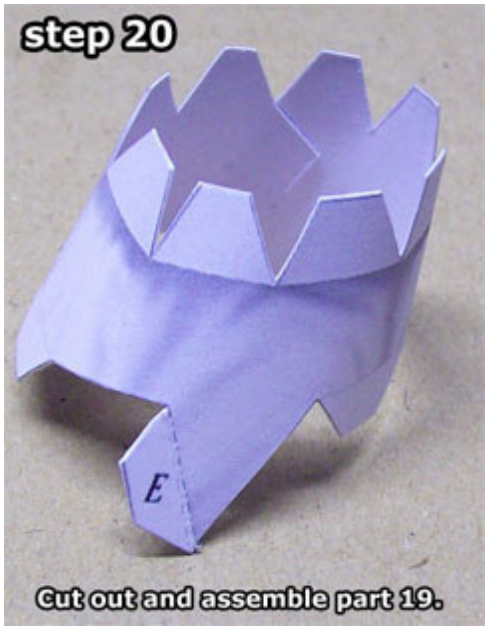

step 15
Do the same for parts 15-16 on the opposite shoulder.

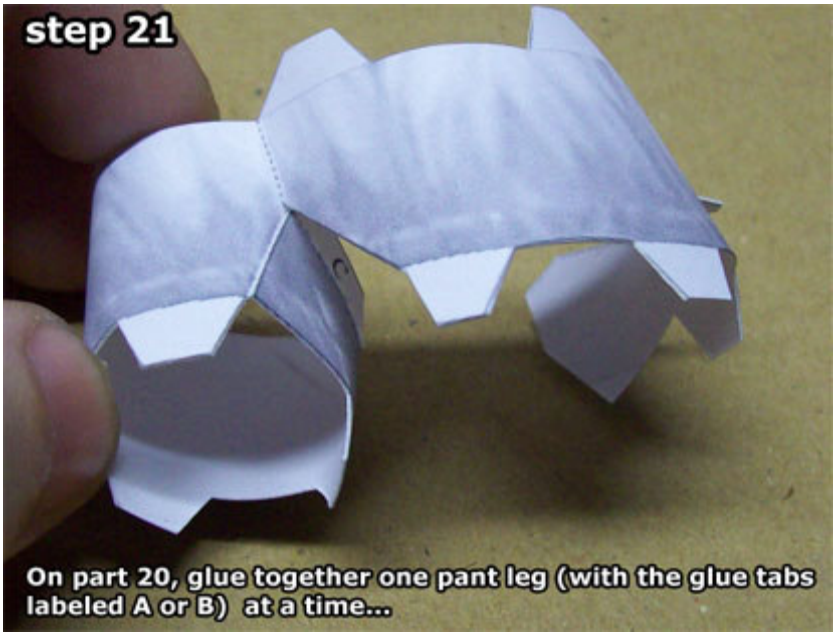

step 16
Now is also the time to glue on the bottom part of the dress.

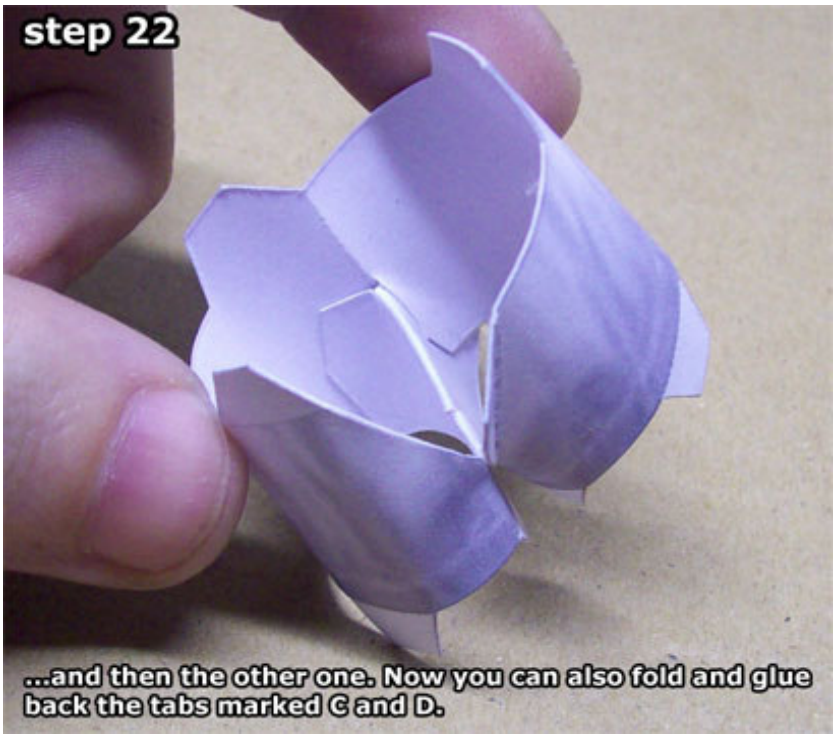

step 17
Cut out part 17 and curve the ribbon a bit. Only glue the top part to the back of Alice's dress as shown here.

step 18
Now cut out the bow (part 18) and glue it together as shown here.

step 19
Put a dab of glue in the center of the bow, and glue it on top of the ribbon.

step 20
E
Cut out and assemble part 19.

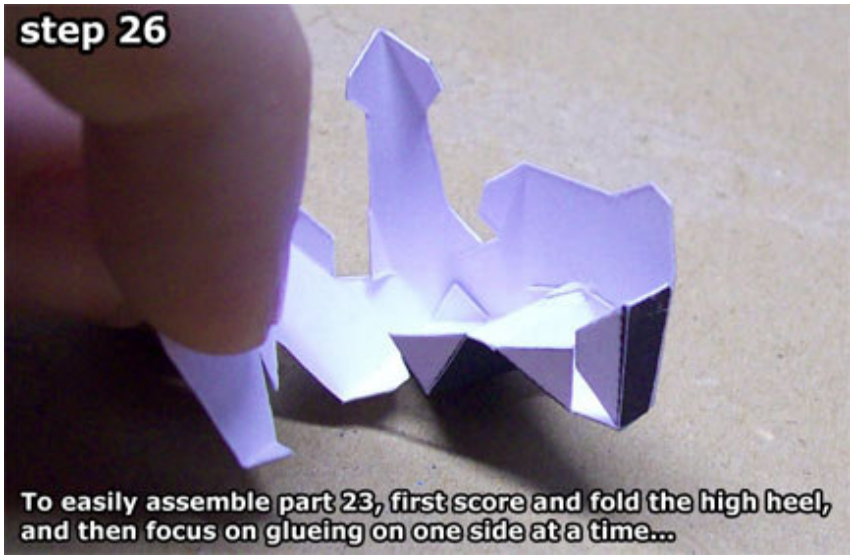

step 21
On part 20, glue together one pant leg (with the glue tabs labeled A or B) at a time...

step 22
...and then the other one. Now you can also fold and glue back the tabs marked C and D.

step 23
Now glue together parts 19 and 20 as shown here.

step 24
Assemble and glue together parts 21 and 22 as shown here.

step 25
Glue the leg parts to the bloomers. Take your time to do this right, else the balance of the model will be slightly off.

step 26
To easily assemble part 23, first score and fold the high heel, and then focus on glueing on one side at a time...

step 27
...and then the top.

step 28
Then glue on part 24 (you can "pinch" the back a little to get a triangular shape, so it's easier to glue on)

step 29
Now glue the shoe to the rest of the boot. Again, take your time to do ensure a good balance of your model.

step 30
Do the same for the other leg (parts 25-28)

step 31
Then apply an ample amount of glue to the grey glue tabs on part 19, and slide the legs part underneath the dress until it goes up the waist.
Take care glueing the legs into position this way, to ensure a good balance. If necessary, ADJUST the feet and/or legs. Alice should be able to stand on her own as shown here, WITHOUT having to glue her down or adding weight in her boots.

step 32
Cut out and assemble part 29 and then glue it to the torso as shown here (the arrow on the glue tabs shows you which side is up)

step 33
Cut out and glue together parts 30 and 31.

step 34
Then glue on parts 32 and 33...

step 35
...and part 34.

step 36
Assemble the nose (part 36) and glue it to the face as shown here.

step 37
Now use the colored glue tabs to glue part 36 to the back of the head.

step 38
Cut out and pre-shape part 37.

step 39
Glue on part 38.

step 40
...and part 39.

step 41
Then pre-shape and glue on part 40.

step 42
Cut out and assemble part 41...

step 43
...then glue it to the rest of the hair as shown here.

step 44
Now glue on part 42.

step 45
Glueing on the thin strip of part 43 might seem initimidating, but it's really not that difficult if you take your time and do one section at a time.

step 46
Now glue the hair to the back of the head, using the hole on the hair to manipulate the glue tabs on the inside. Take your time to do this right.

step 47
Now assemble part 44 and use it to close the hole on the back of the hair. Use the tension in the paper to your advantage and (I keep saying this ;o) take your time.

step 48
Now glue the head on top of the neck.
After that, shape the hair a bit; push and work the front tips of the hair a bit so they look good (not pointing outwards away from eachother)

step 49
Assemble and glue together parts 45-48 (I found it easiest to do so in the particular order as indicated by the part numbers)

step 50
Pre-shape part 49, and then glue the tab marked A to the edge marked A as indicated and show here.

step 51
...And then connect the glue tab marked B.

step 52
The "trick" to assembling the fingers (or in the case of part 50, the thumb) is to just fold/pre-shape the part over a toothpick...

step 53
...and you basically already made the part! All you need to do, is put some glue on the tab.

step 54
Now you can glue the thumb to the rest of the hand as shown here.

step 55
Glue together part 51 using the "toothpick-method" like you did the thumb. The blue line indicates you should glue that part to the blue glue tabs on part 49 as show here.

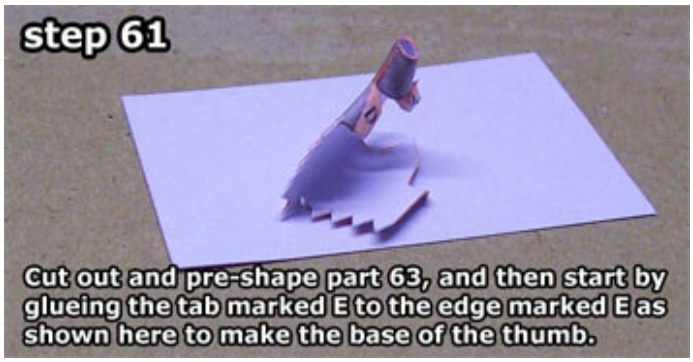

step 56
Do the same for parts 52-54 as shown here.

step 59
...and the arm to the shoulder.

step 58
Now glue the hand to the arm...

step 57
Now assemble and glue on the fingertips (parts 55-58).

step 60
Cut out and glue together parts 59-62 as shown here.

step 61
Cut out and pre-shape part 63, and then start by glueing the tab marked E to the edge marked E as shown here to make the base of the thumb.

step 62
Now further assemble part 63 by glueing the tab marked D to the edge marked D. The tabs marked G and F will follow naturally.

step 63
Assemble and glue on the thumb and fingers (parts 64-72) as you did the thumb and fingers of the other hand.

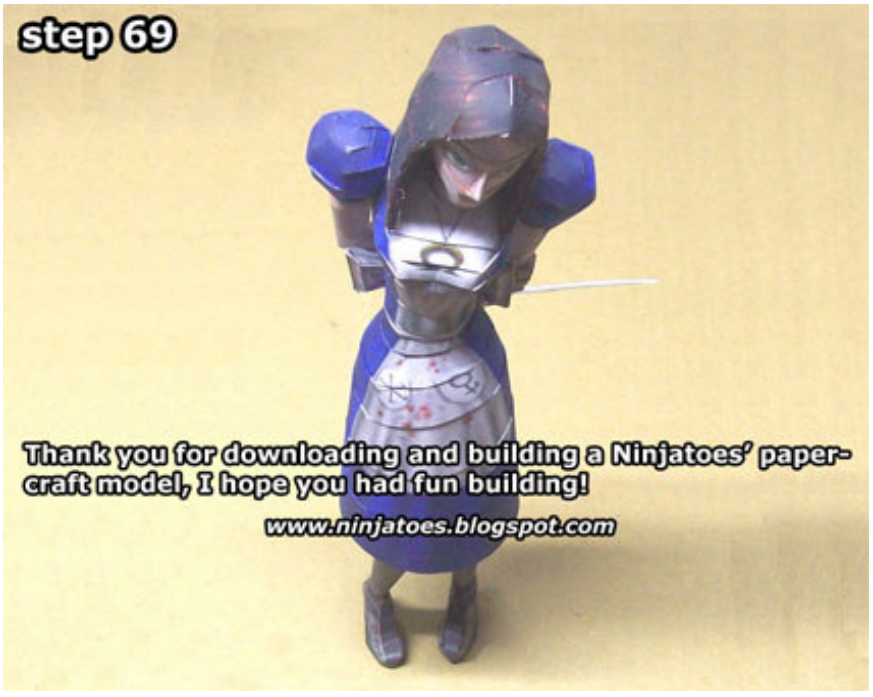

step 65
...and the arm to the shoulder again. As you can see, Alice is holding her left arm with her right hand, so adjust the arms, right hand, and fingers until you can easily get it into that position.

step 64
Then glue the hand to the arm...

step 66
Now cut out and glue together (back-to-back) parts 73 and 74. The base of the blade should make a pyramid/diamond kind of shape as shown here.

step 68
Now place the vorpal blade in Alice's hand as shown here (use glue if necessary) and your papercraft Alice model is finished!

step 67
Cut out and assemble part 75, and glue on the blade you just made.

step 69
Thank you for downloading and building a Ninjatoes' paper-craft model, I hope you had fun building!
