# Type-3 Phaser Compression Rifle- Assembly

## Construction Tips

Glue the stock trim onto the sides of the main body before assembling the main body. Gluing them on after the main body is assembled can lead to crushing the stock.

When assembling the main body, leave some of the perimeter flaps unglued along the way. The length of the main body gives it the tendency to warp if not glued perfectly, and leaving a few flaps until last allows room to compensate for twist.
